

Turnpike Mainline (SR 91) Interchange Improvements at Kissimmee Park Road FPID: 441224-2

Project Description

This project removes the existing ramps at the Kissimmee Park Road partial interchange. A proposed new Turnpike interchange will be constructed at an extension of W. New Nolte Road, located approximately 1/2 a mile north of the existing Kissimmee Park Road interchange. This new interchange will provide all directional access to and from the Turnpike.

The proposed interchange features a diverging diamond configuration, which offers improved capacity with a smaller footprint. The PD&E and Design for the interchange modification will be conducted concurrently.
