Contamination Screening Evaluation Report

Florida Department of Transportation

Florida's Turnpike Enterprise

Orlando South Ultimate Interchange

Florida's Turnpike (SR 91, MP 254) and Beachline
Expressway (SR 528, MP 4)

Orange County, Florida

Financial Project ID Number: 438547-1-22-01

ETDM Number: 14294

Date: February 2020

"The PD&E Study's support documents were developed in consideration of FTE's Express Lanes Master Plan, which was in effect before October 2019. However, during design phase, the concepts will be updated to Managed Lanes criteria. Managed Lanes plan will not have additional tolls on the facility and will not affect the results of the PD&E study (please see Section A.0 – Project Addendum)."

DRAFT

A.0 PROJECT ADDENDUM

The development of alternatives for the Orlando South Ultimate Interchange Project Development & Environment (PD&E) Study was completed in consideration of the Florida's Turnpike Enterprise (FTE's) Express Lane Master Plan in effect at the study Notice to Proceed which included the following:

- Two Express Lanes and three General Toll Lanes in each direction on Florida's Turnpike, separated by a buffer with Express Lane Markers
- One Express Lane and three General Toll Lanes in each direction on the Beachline Expressway, separated by a buffer with Express Lane Markers

Incorporation of the Express Lane Plan is included in the supporting documents and analysis.

In October 2019, FTE elected to change its operational approach and will not implement dynamically tolled express lanes on these facilities. The FTE is now implementing a Managed Lane system that restricts truck usage on selected lanes on its facilities without the additional toll. Revised typical sections for Florida's Turnpike and the Beachline Expressway are shown on **Figures A-1 and A-2**.

Figure A-1
Florida's Turnpike Managed Lane Typical Section

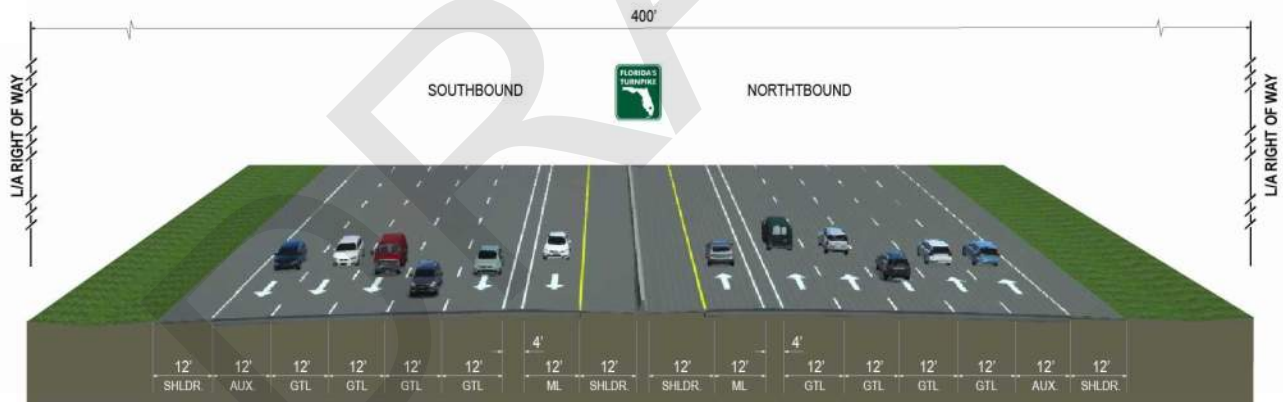

Figure A-2
Beachline Expressway Managed Lane Typical Section

This proposed change will be implemented during final design. The change does not invalidate the results of this study because the proposed footprint of the Florida's Turnpike and the Beachline Expressway is the same as the studied typical section. Therefore, there is no increase in impacts.

DRAFT

EXECUTIVE SUMMARY

The Florida Department of Transportation (FDOT), Florida's Turnpike Enterprise (FTE) is conducting a Project Development and Environment (PD&E) Study for the Orlando South Ultimate Interchange, located in Orange County, Florida. The project limits for the study are:

- Florida's Turnpike from south of Taft Vineland Road to Sand Lake Road (SR 482), and
- Beachline Expressway from John Young Parkway (CR 423) to east of the Beachline West Toll Plaza.

The project elements include new and improved connections between the two highways and with local roadways, electronic toll facilities, future express-lane expansion and other associated infrastructure (e.g., stormwater ponds, roadway signalization, etc.).

This *Contamination Screening Evaluation Report* (CSER) has been prepared in accordance with the FDOT PD&E Manual. The purpose of this Level I Assessment (also called a Desktop Review) is two-fold: (i.) to identify known, or potential, sites of environmental contamination, hazardous materials and other regulated substances (e.g., petroleum products, hazardous wastes, solid wastes) in the vicinity of the project and (ii.) categorize the sites based on the PD&E contamination risk-rating system for the potential to cause contamination impacts associated with the project.

Consistent with the FDOT guidance manual, this evaluation was conducted following a set of standard practices including (but not limited to) an electronic search of environmental agency databases; a review of current and historical aerial photography and maps; and in-the-field reconnaissance of the project area. Using the data and information collected during the course of the investigation, a total of 162 sites were identified and categorized as No-, Low-, Medium- or High-Risk sites. The outcomes of this analysis are summarized as follows according to the contamination risk-rating categorizations:

- **No/Low-Risk Sites:** There are 144 sites that are considered to have no or little likelihood of posing environmental contamination problems to the project. These sites are reported to have past and/or current land uses, regulatory records or other indicators of hazardous materials, spills or other potential sources of environmental contamination. However, this information combined with the distance and direction from the project preclude significant impacts. They typically comprise solid waste disposal facilities, hazardous waste generators and sites of minor spills.

- **Medium-Risk Sites:** There are 12 sites that are viewed as having the potential to pose contamination impacts on the project, but there is insufficient information to make a more definitive determination. However, based on what is known about the site in combination with other relevant factors (e.g., land use, distance to the project, types of contamination), the risks of environmental contamination impacts to the project are reduced. These sites primarily include gas stations and other facilities with underground storage tanks (USTs) with reported spills and a light industrial facility. For these sites, it is recommended that more detailed investigations be conducted, as necessary, to further ascertain the potential impacts.
- **High-Risk Sites:** There are six sites that are determined to have a high likelihood of causing contamination impacts to the project. The findings are based on agency records of past environmental practices and incidents, site reconnaissance and proximity to the project. These sites include motor vehicle leasing/service facilities with reported fuel spills, a waste recovery facility and an industrial facility. In all six cases, the primary risk stems from the potential for underground migration of contaminants through soil, surface and groundwater from the site to the project. For these sites, further evaluation of the potential impacts of contamination on the project are warranted in the form of Level II or III assessments.

Included in this analysis, 20 proposed stormwater ponds were evaluated under the Preferred Option (Pond Option 2). Four ponds are located near High-Risk Sites and one pond is near a Medium-Risk Site.

Importantly, there were no sites identified in the project area that are listed on the U.S. EPA "Superfund" program or constitute large-scale sources of environmental contamination.

In accordance with FDOT guidance, it is recommended that the High-rated and Medium-rated sites receive additional investigations in the form of Level II or III assessments. This follow-up work should be undertaken during the Project Design Phase and before right-of-way acquisition. In this way, the construction of the proposed roadway improvements will not worsen contamination conditions and preparations made to mitigate the potential impacts.

Finally, no CSER can wholly eliminate the uncertainty regarding the potential for environmental contamination in connection with a property, facility, site or pond. Therefore, this evaluation is intended to reduce, but not eliminate, this uncertainty regarding the potential for environmental contamination impacts associated with the project based on the FDOT PD&E Manual.

Disclaimer

No contamination assessment can wholly eliminate uncertainty regarding the potential for environmental contamination in connection with a property or corridor. This Contamination Screening Evaluation Report (CSER) is intended to reduce, but not eliminate, uncertainty regarding the potential for environmental contamination in connection with the areas subject to the referenced Project Development & Environment (PD&E) Study.

Not every feature presented herein warrants the same level of assessment and must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent evaluation should not be considered valid standards by which to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors.

This CSER was prepared at the request of Florida Department of Transportation's (FDOT's) Florida's Turnpike Enterprise (i.e., the User), for the purposes identified in accordance with Part 2, Chapter 20 of the PD&E Manual (2019). FDOT is not responsible for independent conclusions, opinions, or recommendations made by others or otherwise based on the findings presented in this report.

DRAFT

1.0 PROJECT SUMMARY

1.1 Project Description

The Florida Department of Transportation's (FDOT), Florida's Turnpike Enterprise (FTE) is conducting a Project Development & Environment (PD&E) Study for the Orlando South Ultimate Interchange at Florida's Turnpike (State Road (SR) 91, Milepost (MP) 254) and Beachline Expressway (SR 528, MP 4), in Orange County, Florida. The project limits are shown on **Figure 1-1: Project Location Map**. The specific project limits for the study are:

- Florida's Turnpike from south of Taft Vineland Road to Sand Lake Road (SR 482), and
- Beachline Expressway from John Young Parkway (CR 423) to east of the Beachline West Toll Plaza.

Florida's Turnpike is a limited access facility with four 12-foot (-ft) lanes (two lanes in each direction) south of Taft Vineland Road and eight 12-ft lanes (four lanes in each direction) north of the Beachline Expressway. FTE is currently widening Florida's Turnpike (FPID 411406-1) south of the Beachline Expressway to continue the eight 12-ft lanes typical section. Construction for FPID 411406-1 is expected to be completed by year 2020.

The Beachline Expressway is also a limited access facility with two widening projects under construction within the project limits. Both projects, described below, are expected to be opened to traffic by the summer of 2019.

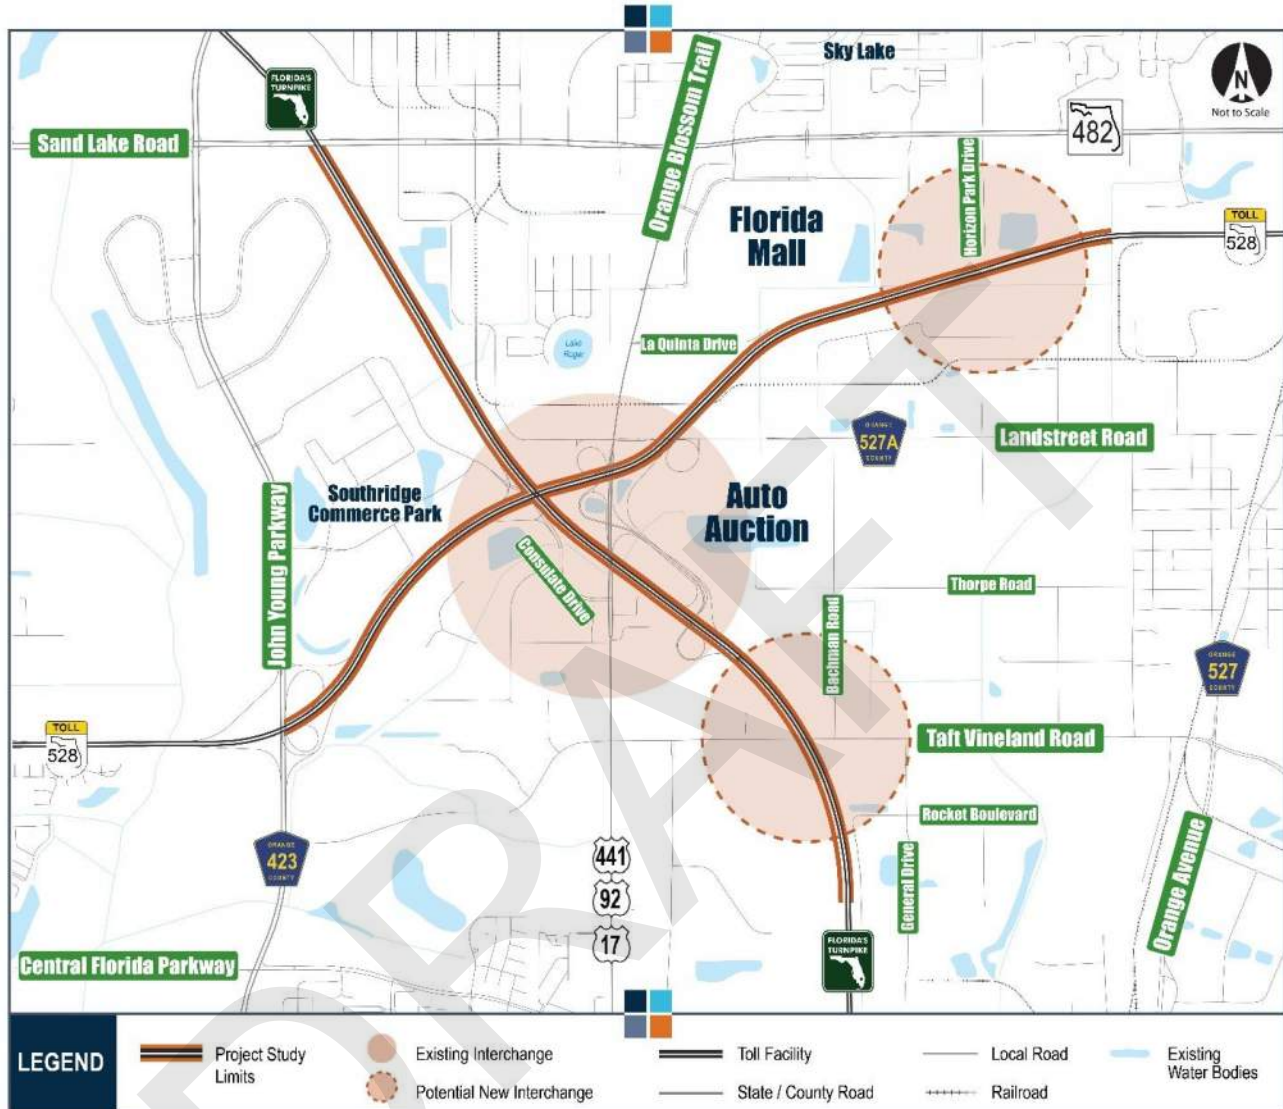

- FPID 406090-5: Widening from four to eight 12-ft lanes with a 4-ft buffer to include two General Toll Lanes (GTLs), two Express Lanes (ELs), and an auxiliary lane in each direction from I-4 (MP 0.0) to Florida's Turnpike (MP 4.3), west of the interchange.
- FPID 437156-1: Widening from six to eight 11.5-ft lanes with a 2-ft buffer to include three GTLs and one EL in each direction from Florida's Turnpike (MP 4.3) to the McCoy Road interchange (MP 8.4), east of the interchange.

Improvements are needed to address traffic needs and optimize safety at Florida's Turnpike and the Beachline Expressway. The alternatives evaluated include:

- New and improved connections between Florida's Turnpike and the Beachline Expressway
- All Electronic Toll (AET)
- Improved connections to local roads to address traffic operations
- Future EL expansion

This PD&E Study will also include analysis of the No-Build Alternative which would result in no additional improvements except those currently programmed.

Figure 1-1
Project Location Map

1.2 Purpose & Need

The purpose of the Orlando South Ultimate Interchange improvement is to accommodate future travel demands expected along Florida’s Turnpike and Beachline Expressway due to increased population, freight demands, and employment opportunities expected in Orange County, Florida. The interchange improvements will also provide improved access to tourist centers, Orlando International Airport, Port Canaveral, and the growing industrial region surrounding the project location.

Within the Orlando South interchange, there are 13 ramp connections that directly or indirectly connect between the Beachline Expressway, Florida’s Turnpike and Orange Blossom Trail. Although the planned construction of the Florida’s Turnpike at Sand Lake Road interchange will

SECTION 1.0 – PROJECT SUMMARY

alleviate demand at some ramps, in the study area, traffic on all facilities are still expected to increase over time. In order to maintain an acceptable Level of Service (LOS) (LOS D for Florida's Turnpike mainline and LOS E for ramps), Florida's Turnpike will need to be widened to ten lanes by the year 2038 north of the Orlando South interchange and by the year 2040 to the south of the interchange under the No-Build scenario. Additionally, total freight movements across Orange County are expected to increase by up to 58% by 2040, which will place higher traffic demands on designated Strategic Intermodal System (SIS) corridors like Florida's Turnpike and Beachline Expressway.

The Florida Future Corridors Initiative has recommended improvements be made to Florida's Turnpike and Beachline Expressway near Orlando to accommodate future traffic demands. Currently, the Beachline Expressway is the only limited access roadway that provides a high-speed connection between Orlando and Brevard County. The interchange improvements, along with existing plans to widen Beachline Expressway to eight lanes from I-4 to McCoy Road (Financial Project Identification (FPID) #406090-5 and #437156-1) will address these needs. Currently, this area is home to Southpark Center with over 2.9 million square feet of building space.

Although not directly serviced by the interchange, the Orange County Convention Plaza Overlay District and International Drive (I-Drive) are located approximately four miles to the west of the project location. Universal Orlando has also recently acquired approximately 500 acres of vacant land between the project location and I-Drive, which has been zoned for theme park use and is expected to be developed as such in the future.

These developments will contribute to increasing traffic volumes on the limited access roadways that connect the area with other parts of the state, such as, Florida's Turnpike, Beachline Expressway and I-4. Improvements on interchanges that surround this area of future growth relieve congestion and provide efficient access to new development from multiple limited access facilities.

2.0 PROJECT ALTERNATIVES

2.1 No-Build (No-Action) Alternative

The future No-Build network includes the following planned and programmed improvements within the study area:

- Florida's Turnpike (SR 91) mainline widening (FPID: 411406-1) from four to eight lanes: two General Toll Lanes (GTL) and two Express Lanes (EL) in each direction. This project extends from the Osceola Parkway interchange at MP 248.93 to the Orlando South interchange at MP 254. It will include widening ramps to/from the north at Orlando South to two lanes. It is expected to be completed by year 2020.
- Implementation of ELs on Florida's Turnpike from the Orlando South interchange to I-4 (MP 254 to 259) and direct connect ramps to/from I-4 (FPID: 437166-2 and 437987-3). This project is expected to be implemented by year 2021/2022. It includes an EL ingress/egress weaving zone between Sand Lake Road (SR 482) and I-4, direct connection of the ELs from Florida's Turnpike (south of I-4) to I-4 (east of Florida's Turnpike) and widening of ramps to/from the north at the I-4 interchange. The I-4 ramps, to/from the north, will be converted to AET. This project will also include implementation of the following interim improvements at the Florida's Turnpike southbound (SB) off-ramp terminal intersection with Consulate Drive: an exclusive SB right-turn lane with a receiving lane along Consulate Drive, a second westbound (WB) left-turn lane, and a second receiving lane on the WB on-ramp to Beachline Expressway that terminates upstream of the gore. Florida's Turnpike Enterprise (FTE) has subsequently deferred EL implementation until after completion of the Sand Lake Road interchange.
- The Beachline Expressway (SR 528) widening (FPID: 406090-5) from four to eight lanes to include two GTLs, two ELs, and an auxiliary lane in each direction from I-4 (MP 0.0) to Florida's Turnpike (MP 4.3). This project is expected to be opened to traffic by the summer of 2019.
- The Beachline Expressway widening (FPID: 437156-1) from six to eight lanes to include three GTLs and one EL in each direction from Florida's Turnpike (MP 4.3) to the McCoy Road interchange (MP 8.4). This project is expected to be opened to traffic by year 2019.
- Orlando South interchange resurfacing (FPID: 437156-2). This project includes widening of the combined WB Beachline Expressway and SB Orange Blossom Trail (US 441/17/92) to Florida's Turnpike ramp from one to two lanes. The two-lane ramp is expected to be opened to traffic by year 2019.
- Florida's Turnpike interchange at Sand Lake Road at MP 257 (FPID: 433663-1). This will be a full interchange with tolled ramps to and from the north. Construction is expected to begin in late 2021.

SECTION 2.0 – PROJECT ALTERNATIVE

- Express lane implementation on Florida’s Turnpike (FPID 433633-2). This project is a “Goes-With” the Sand Lake Road Interchange (FPID 433633-1)
- All Electronic Tolling (AET) conversion at all tolled ramps (FPID: 441322-1). Conversion is expected in summer of 2020.
- Single Point Urban Interchange (SPUI) at the Sand Lake Road and John Young Parkway intersection. The construction of the SPUI is complete.
- Taft Vineland Road widening from two to four lanes from Orange Blossom Trail to the bridge over Florida’s Turnpike.
- Sand Lake Road and Destination Parkway widening to six lanes just west of John Young Parkway.

Most of the planned improvements are within FTE’s system and will be funded by FTE. The only exceptions are the last three listed projects which are being designed and constructed by others.

Traffic operations with the planned and programmed improvements are expected to be at unacceptable levels within the Orlando South interchange in the 2045 design year.

2.2 Viable Build Alternatives

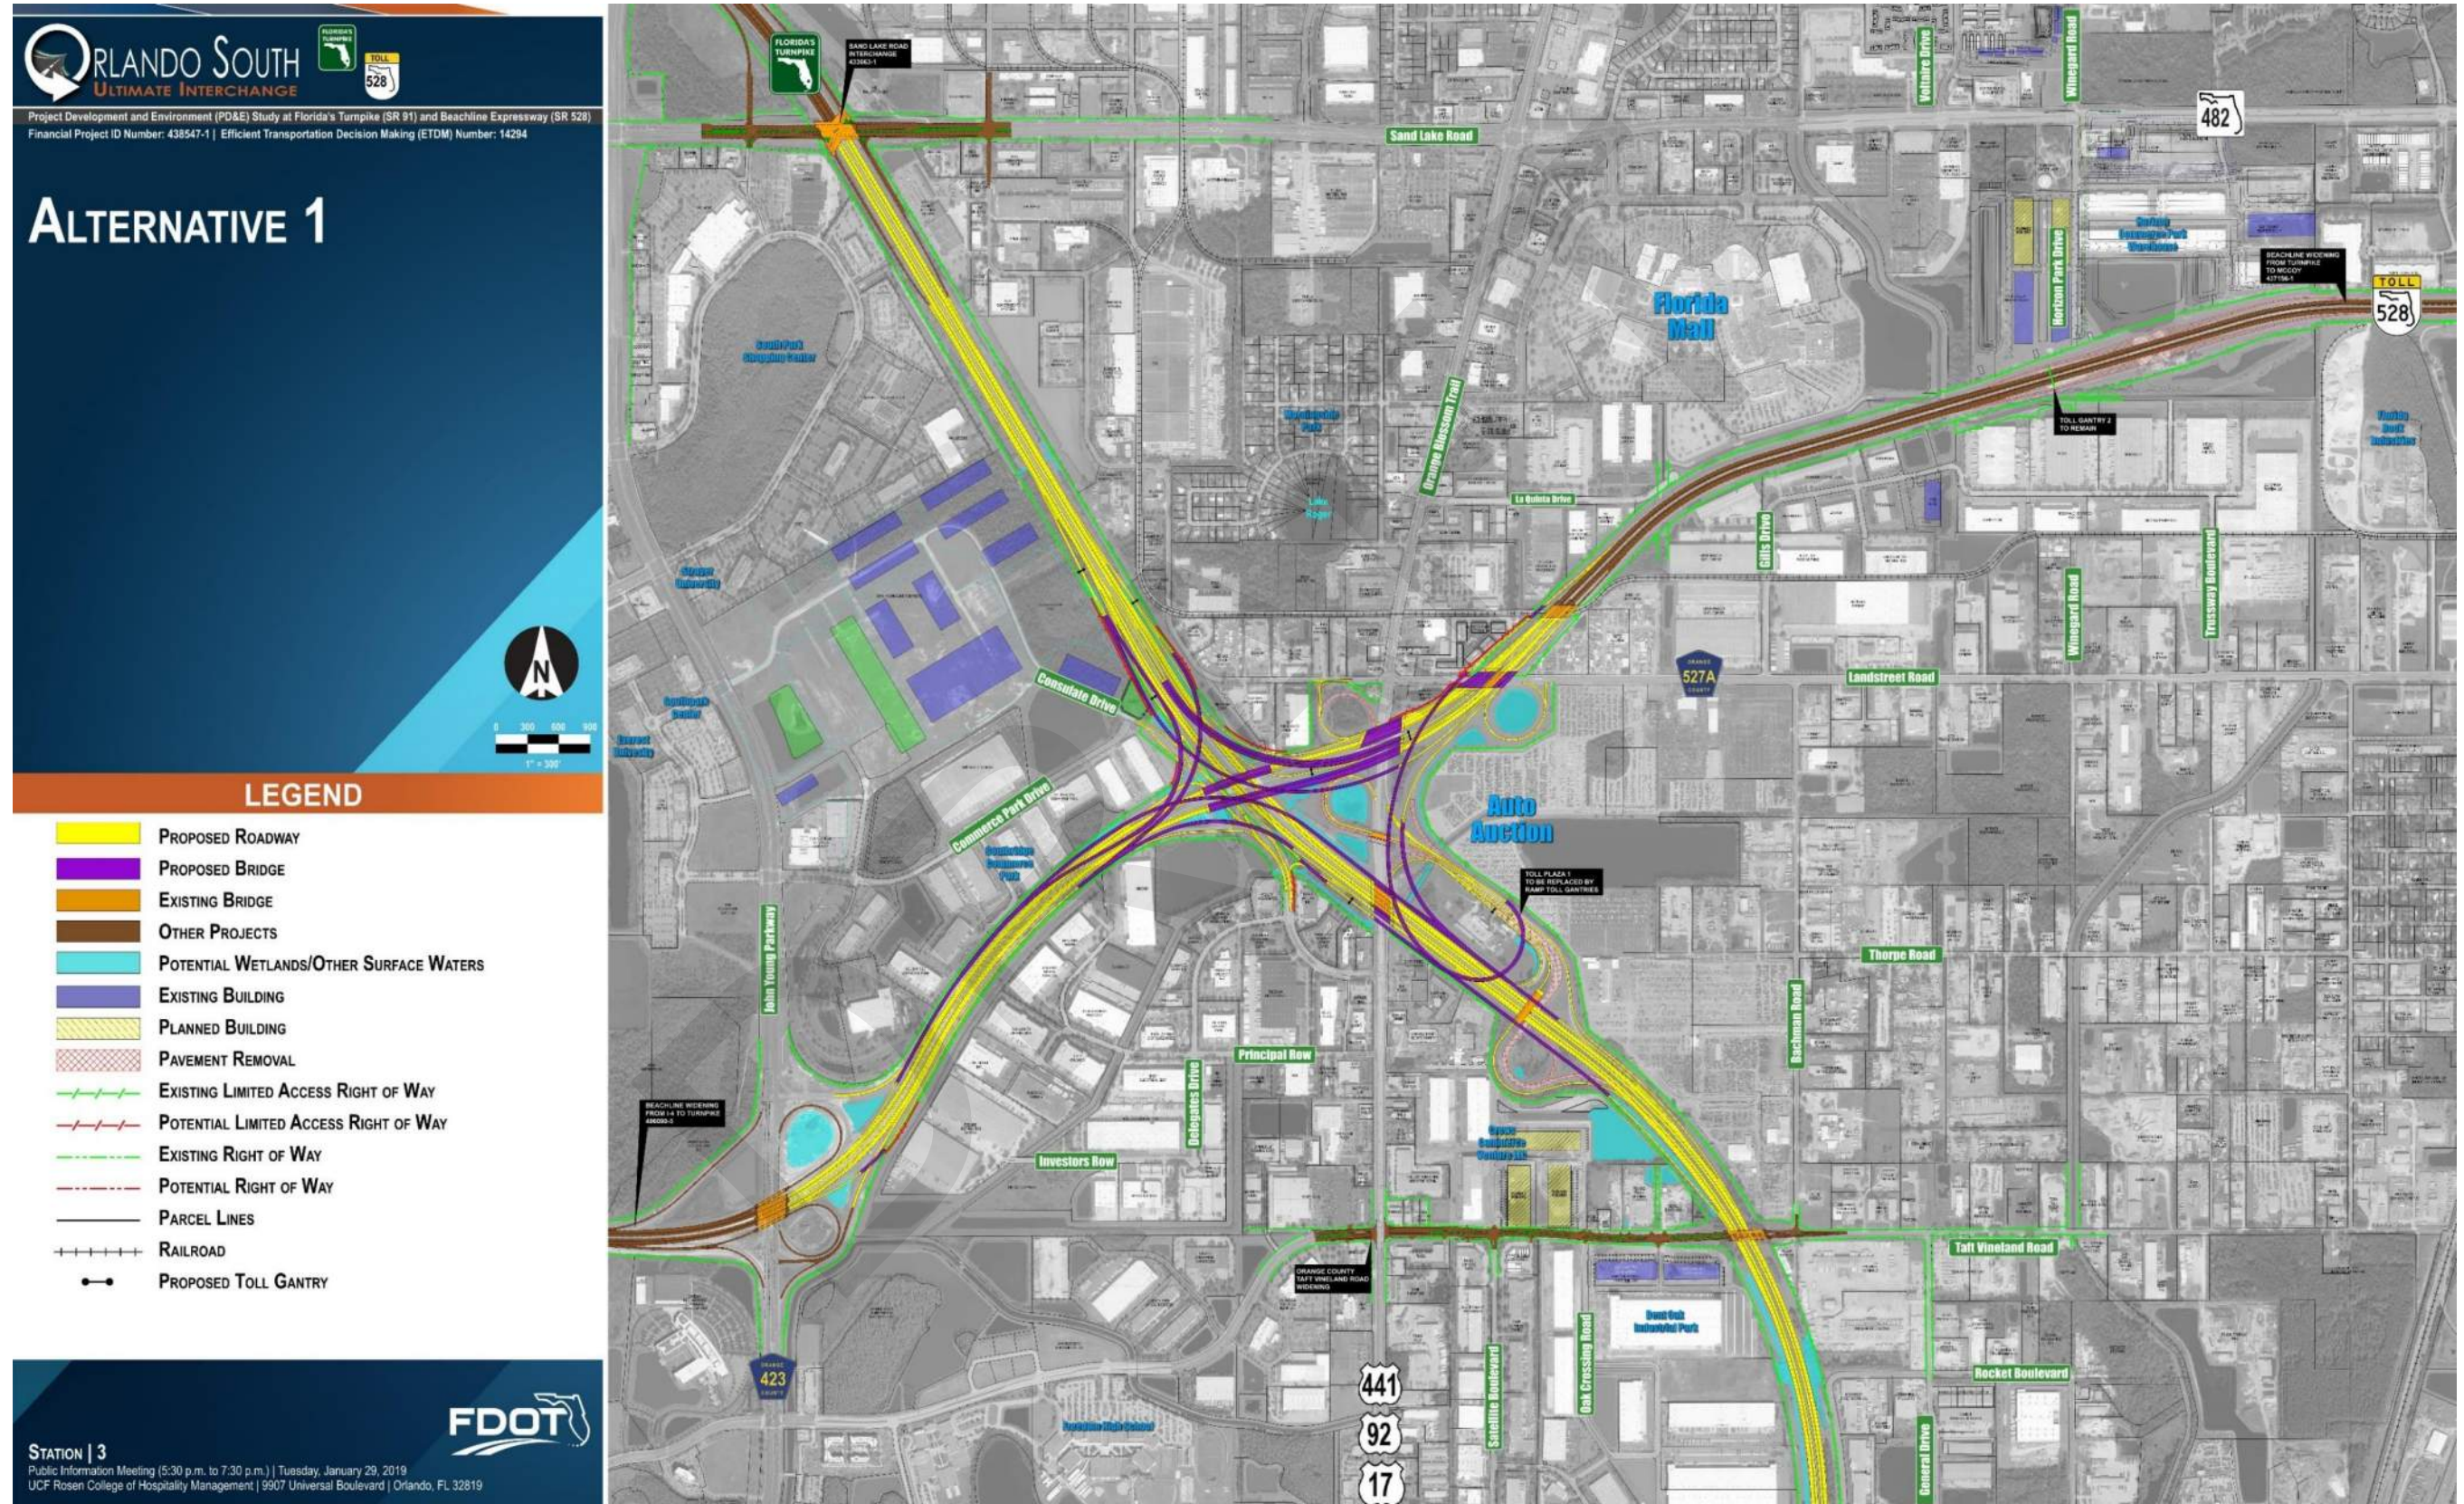

The viable alternatives developed include the improvements identified in the No-Build and additional improvements to meet FTE needs for enhancing safety, addressing traffic needs, improving travel time reliability and providing long-term mobility for the Orlando South interchange.

2.2.1 *Build Alternative 1*

Based on meeting the basic project needs, with least costs and impacts, the “D” concept was selected as Build Alternative 1, shown on **Figure 2-1: Build Alternative 1**. Build Alternative 1 meets all project objectives except the dispersing of surface street traffic and includes:

- Directional GTL systems ramps,
- Directional north/east EL ramps,
- Realignment of the Beachline Expressway to provide longer spans for a ten-lane Florida’s Turnpike typical section,
- Maintaining the Landstreet Road (CR 527A) ramps connected to the Beachline Expressway,
- Maintaining Consulate Drive entry/exit ramps connected to the Beachline Expressway and the SB exit from Florida’s Turnpike with a Diverging Diamond Interchange,
- Modifications to the remaining Orange Blossom Trail ramps to preclude weaving,
- A new SB entry ramp to Florida’s Turnpike SB via Consulate Drive,
- A new more direct entry to Florida’s Turnpike northbound (NB) from Orange Blossom Trail SB.

Figure 2-1
Build Alternative

SECTION 2.0 – PROJECT ALTERNATIVE

- A new SB Florida's Turnpike to NB Orange Blossom Trail flyover to provide a higher speed ramp,
- Use of the SB Florida's Turnpike exit to Consulate Drive for access to Orange Blossom Trail SB, and
- Ramp braiding between John Young Parkway and Consulate Drive to preclude adverse weaving.

Build Alternative 1 has right of way impacts on the north side of the Beachline Expressway from east of Florida's Turnpike to east of Landstreet Road. These impacts are caused by the geometric requirements of the systems ramps connected to the WB Beachline Expressway. The WB Beachline Expressway exit to SB Florida's Turnpike has significant impacts to the Blossom Park Condominiums and Travelodge Hotel. These impacts could not be avoided due to the space required for the express direct connections in the median of the Beachline Expressway and realignment of the East Bound (EB) Beachline Expressway lanes.

Additional impacts along Florida's Turnpike are needed to spread the median of Florida's Turnpike for the express direct connections. This need requires:

- Right of way acquisition in the northwest and northeast quadrants of the interchange, and
- The relocation of an FGT valve station that is located outside the east right of way of the Florida's Turnpike, just north of the Beachline Expressway.

Other project impacts include:

- The relocation of a single FGT line between the NB Orange Blossom Trail exit and the valve station as well as a crossing of the Florida's Turnpike south of the Beachline Expressway, and
- Acquisition of limited access rights without acquisition of property along the east side of Consulate Drive for the construction of the SB entry to SB Florida's Turnpike.

The analysis of Build Alternative 1 revealed improvements in surface street and ramp travel times, particularly the delay at the Consulate Drive/Orange Blossom Trail intersection.

2.2.2 *Build Alternative 2*

Based on best improvement to surface street operations, two "C" concepts were developed as Build Alternative 2, Options 1 and 2. Alternative 2 options meet all project objectives by including the improvements in Alternative 1, plus two new interchanges for surface street access away from the Orlando South Interchange. The construction of the new interchanges improves safety and operations by removing selected surface street ramps at the Orlando South Interchange. The differences in Options 1 and 2 are based on differences in the configuration of the reliever interchanges. The options provided functionally equivalent access and level of service. However,

the reliever interchanges have different impacts, shown on **Figures 2-2: Build Alternative 2 Option 1** and **Figure 2-3: Build Alternative 2 Option 2**.

Common issues for both options include:

- Improvements and impacts identified in Build Alternative 1
- The removal of Landstreet Road ramps connecting to the Beachline Expressway
- The removal of Orange Blossom Trail ramps to/from south at the Orlando South interchange
 - NB Orange Blossom Trail to NB/SB Florida's Turnpike
 - NB Florida's Turnpike to SB Orange Blossom Trail
- Construction of two new reliever interchanges at Florida's Turnpike and the Beachline Expressway.

A description of each reliever interchange option is provided below.

Florida's Turnpike Reliever Interchange

The configuration includes:

- Trumpet style interchange in the NW quadrant.
- Modification of the proposed Taft Vineland Road median to accommodate dual left-turn lanes EB.
- A diamond ramp (EB to SB) in the SE quadrant with minor right-of-way acquisition, depending on design speed of the ramp and compatibility with a sidewalk crossing.
- Impacts to FGT for NB exit crossing at-grade, which could be addressed with a local relocation.

These common elements require the acquisition of five parcels NW of the Taft Vineland bridges over Florida's Turnpike. Partial acquisition of a stormwater management facility for the Crews development is also required.

Two options for the NB exit ramp were carried forward for the Build Alternative 2:

- Alternative 2 – Option 1

This option includes a NB exit, directly connected to Taft Vineland Road, east of the Turnpike. This option requires total acquisition of the Truck Services parcel and minor impacts to the Orlando Terminals parcel to the east.

Figure 2-2
Build Alternative 2 – Option 1

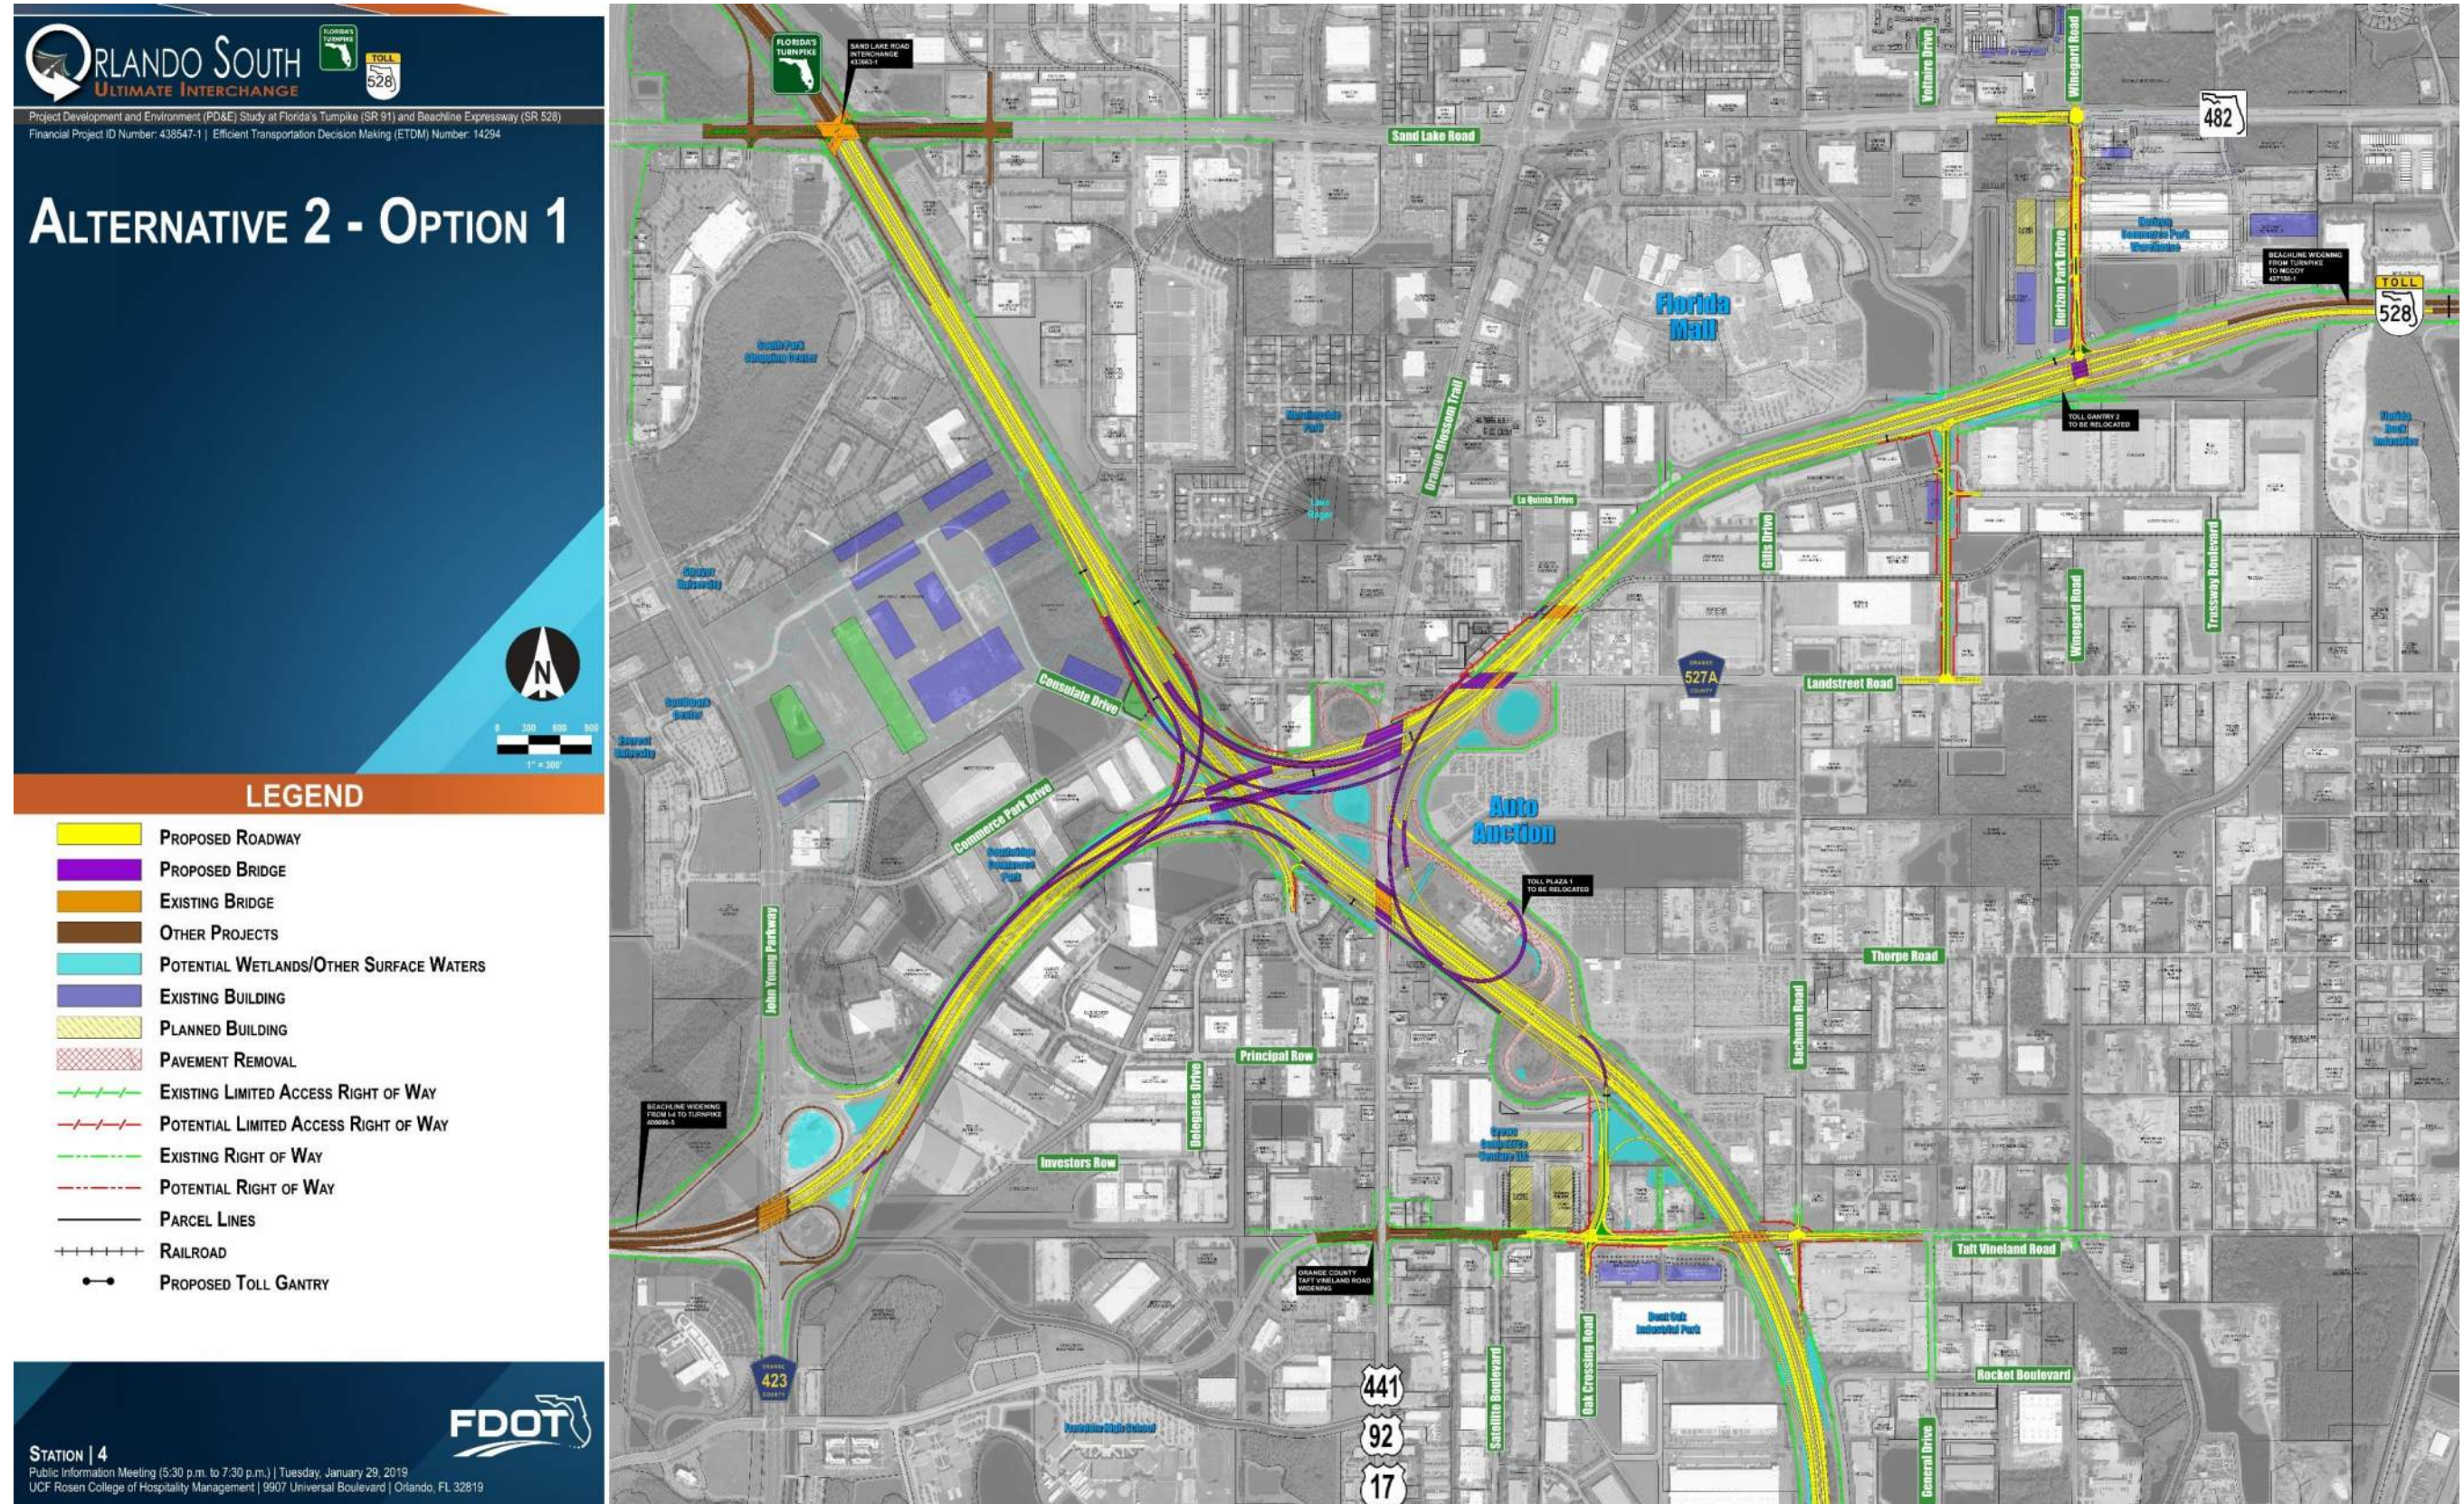

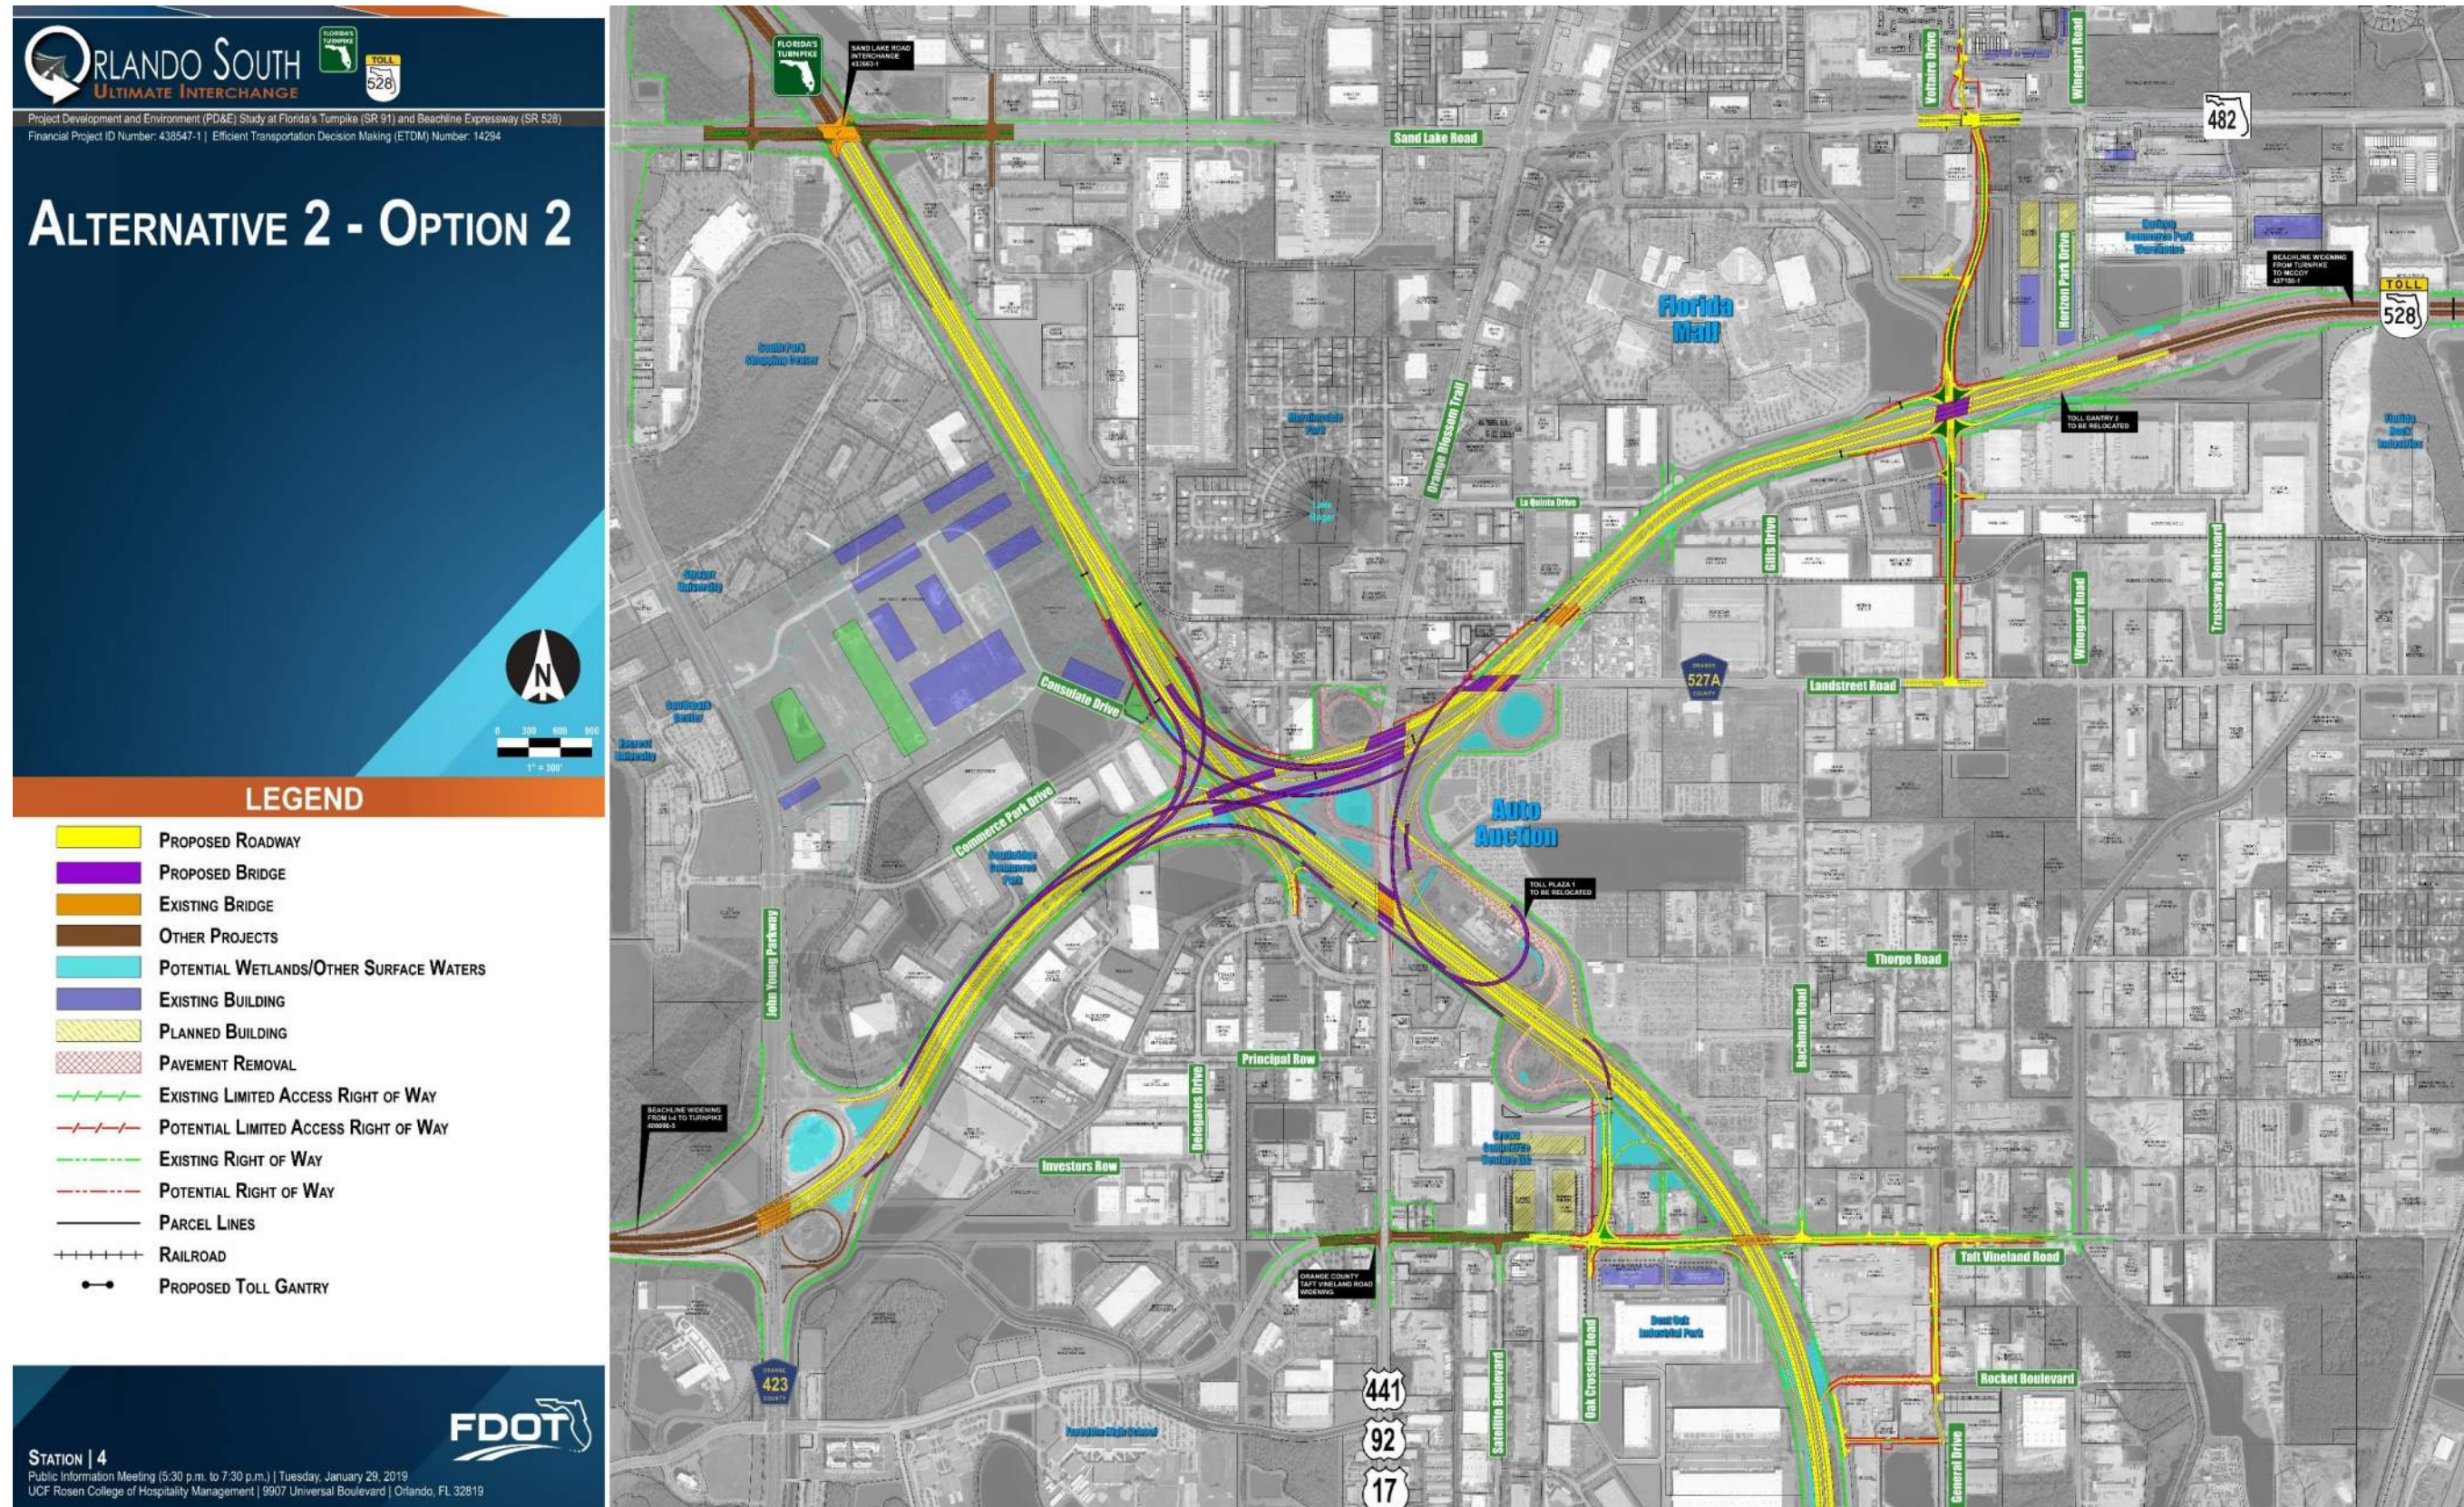

Figure 2-3
Build Alternative 2 – Option 2

SECTION 2.0 – PROJECT ALTERNATIVE

- Alternative 2 - Option 2

Includes a NB exit to Rocket Boulevard with arterial connections to Taft Vineland Road. This option requires termination of Rocket Boulevard where the alignment changes from north-south to east-west for limited access limits. Impacts and mitigation for these impacts include:

- A new connector road linking Rocket Boulevard to General Drive. This road mitigates circuitous access for parcels on the north/south leg of Rocket Boulevard but impacts two parcels.
- An additional NB lane on General Drive (Rocket Boulevard to Taft Vineland Road) to accommodate added traffic from the exit.
- An additional WB lane on Taft Vineland Road (General Drive to Bachman Road) beyond the limits of Orange County's widening to accommodate added traffic from the exit.

Beachline Expressway Reliever Interchange

Two concepts were identified for the Beachline Express reliever Interchange. Both concepts include a new four-lane divided arterial facility, connecting the Beachline Expressway with Sand Lake Road to the north and Landstreet Road to the south. Both concepts require a replacement of the Beachline Expressway toll gantry. This gantry is currently being modified with narrow shoulders to accommodate an eight-lane typical section, as part of the current Beachline Expressway widening project (FPID: 437156-1). One of the advantages of the Beachline Expressway reliever is that the right of way used by the existing toll plaza could be repurposed for ramps for a new interchange. The removal and replacement of the toll site to the east was identified in the *AET Conversion Report for the Beachline Expressway, January 2019* and is included as part of the Orlando South Ultimate interchange improvements.

Both concepts include a common southern arterial alignment that parallels a Duke Energy easement and crosses four stormwater ponds for adjoining parcels. Potential impacts of this common element include:

- A major twin 10-ft x 7-ft box culvert under the Beachline Expressway which may need replacement based on additional fill. Replacement will require realignment, which will in turn impact Orange County canal and drainageways.
- Additional space for replacement of impacted stormwater capacity for off-site parcels.
- A new at-grade crossing for CSX spur.
- Parking on the south leg near Landstreet Road.
- Duke Energy easement along the alignment.
- A new signalized intersection at Landstreet Road.

SECTION 2.0 – PROJECT ALTERNATIVE

Two options were developed for the north leg of this reliever interchange. The difference in the concepts are alignment and the resulting interchange type. These options were incorporated into Alternative 2 – Options 1 and 2, described below:

- Alternative 2 - Option 1

The north arterial leg includes using the existing Horizon Park Drive alignment by widening to a four-lane divided arterial facility. When combined with the common south leg, this arterial results in a split interchange. Additional impacts associated with Alternative 2 - Option 1 include:

- Parking impacts to developed parcels along this corridor.
- Potential impacts to the water treatment facility at Sand Lake Road.
- Relocation of electrical distribution lines along the west side of Horizon Park Drive.
- Signal pole adjustments at Sand Lake Road.

- Alternative 2 - Option 2

The north arterial leg is an extension of the southern alignment along the east side of the Terrace at Florida Mall. The intersection with Sand Lake Road includes a realignment of Voltaire Drive north of Sand Lake Road to form the fourth leg of this intersection. A SPUI at the Beachline Expressway was selected. Additional impacts associated with Alternative 2 - Option 2 include:

- Additional existing pond and canal impacts.
- Right of way acquisition of a vacant parcel in the southeast quadrant of Sand Lake Road and the new alignment and right of way impacts to the Terrace at Florida Mall.
- Closure of the east Sand Lake Road entrance for the Terrace at Florida Mall parcel (primarily used as a service entrance for businesses). To mitigate this closure a new connection along the new arterial alignment is provided.
- The Voltaire Drive realignment has access management modifications on Sand Lake Road, including revised signalization and median closure to the west.
- The realignment of Voltaire Drive requires the acquisition of a 7-11 convenience store and minor impacts to Sandlake Palazzo and Las Palmas at Sand Lake Road Condominium Villas.
- Relocation of transmission and distribution electrical lines along the south side of Sand Lake Road and the east side of the Terrace at Florida Mall.

2.2.3 Selection of a Preferred Alternative

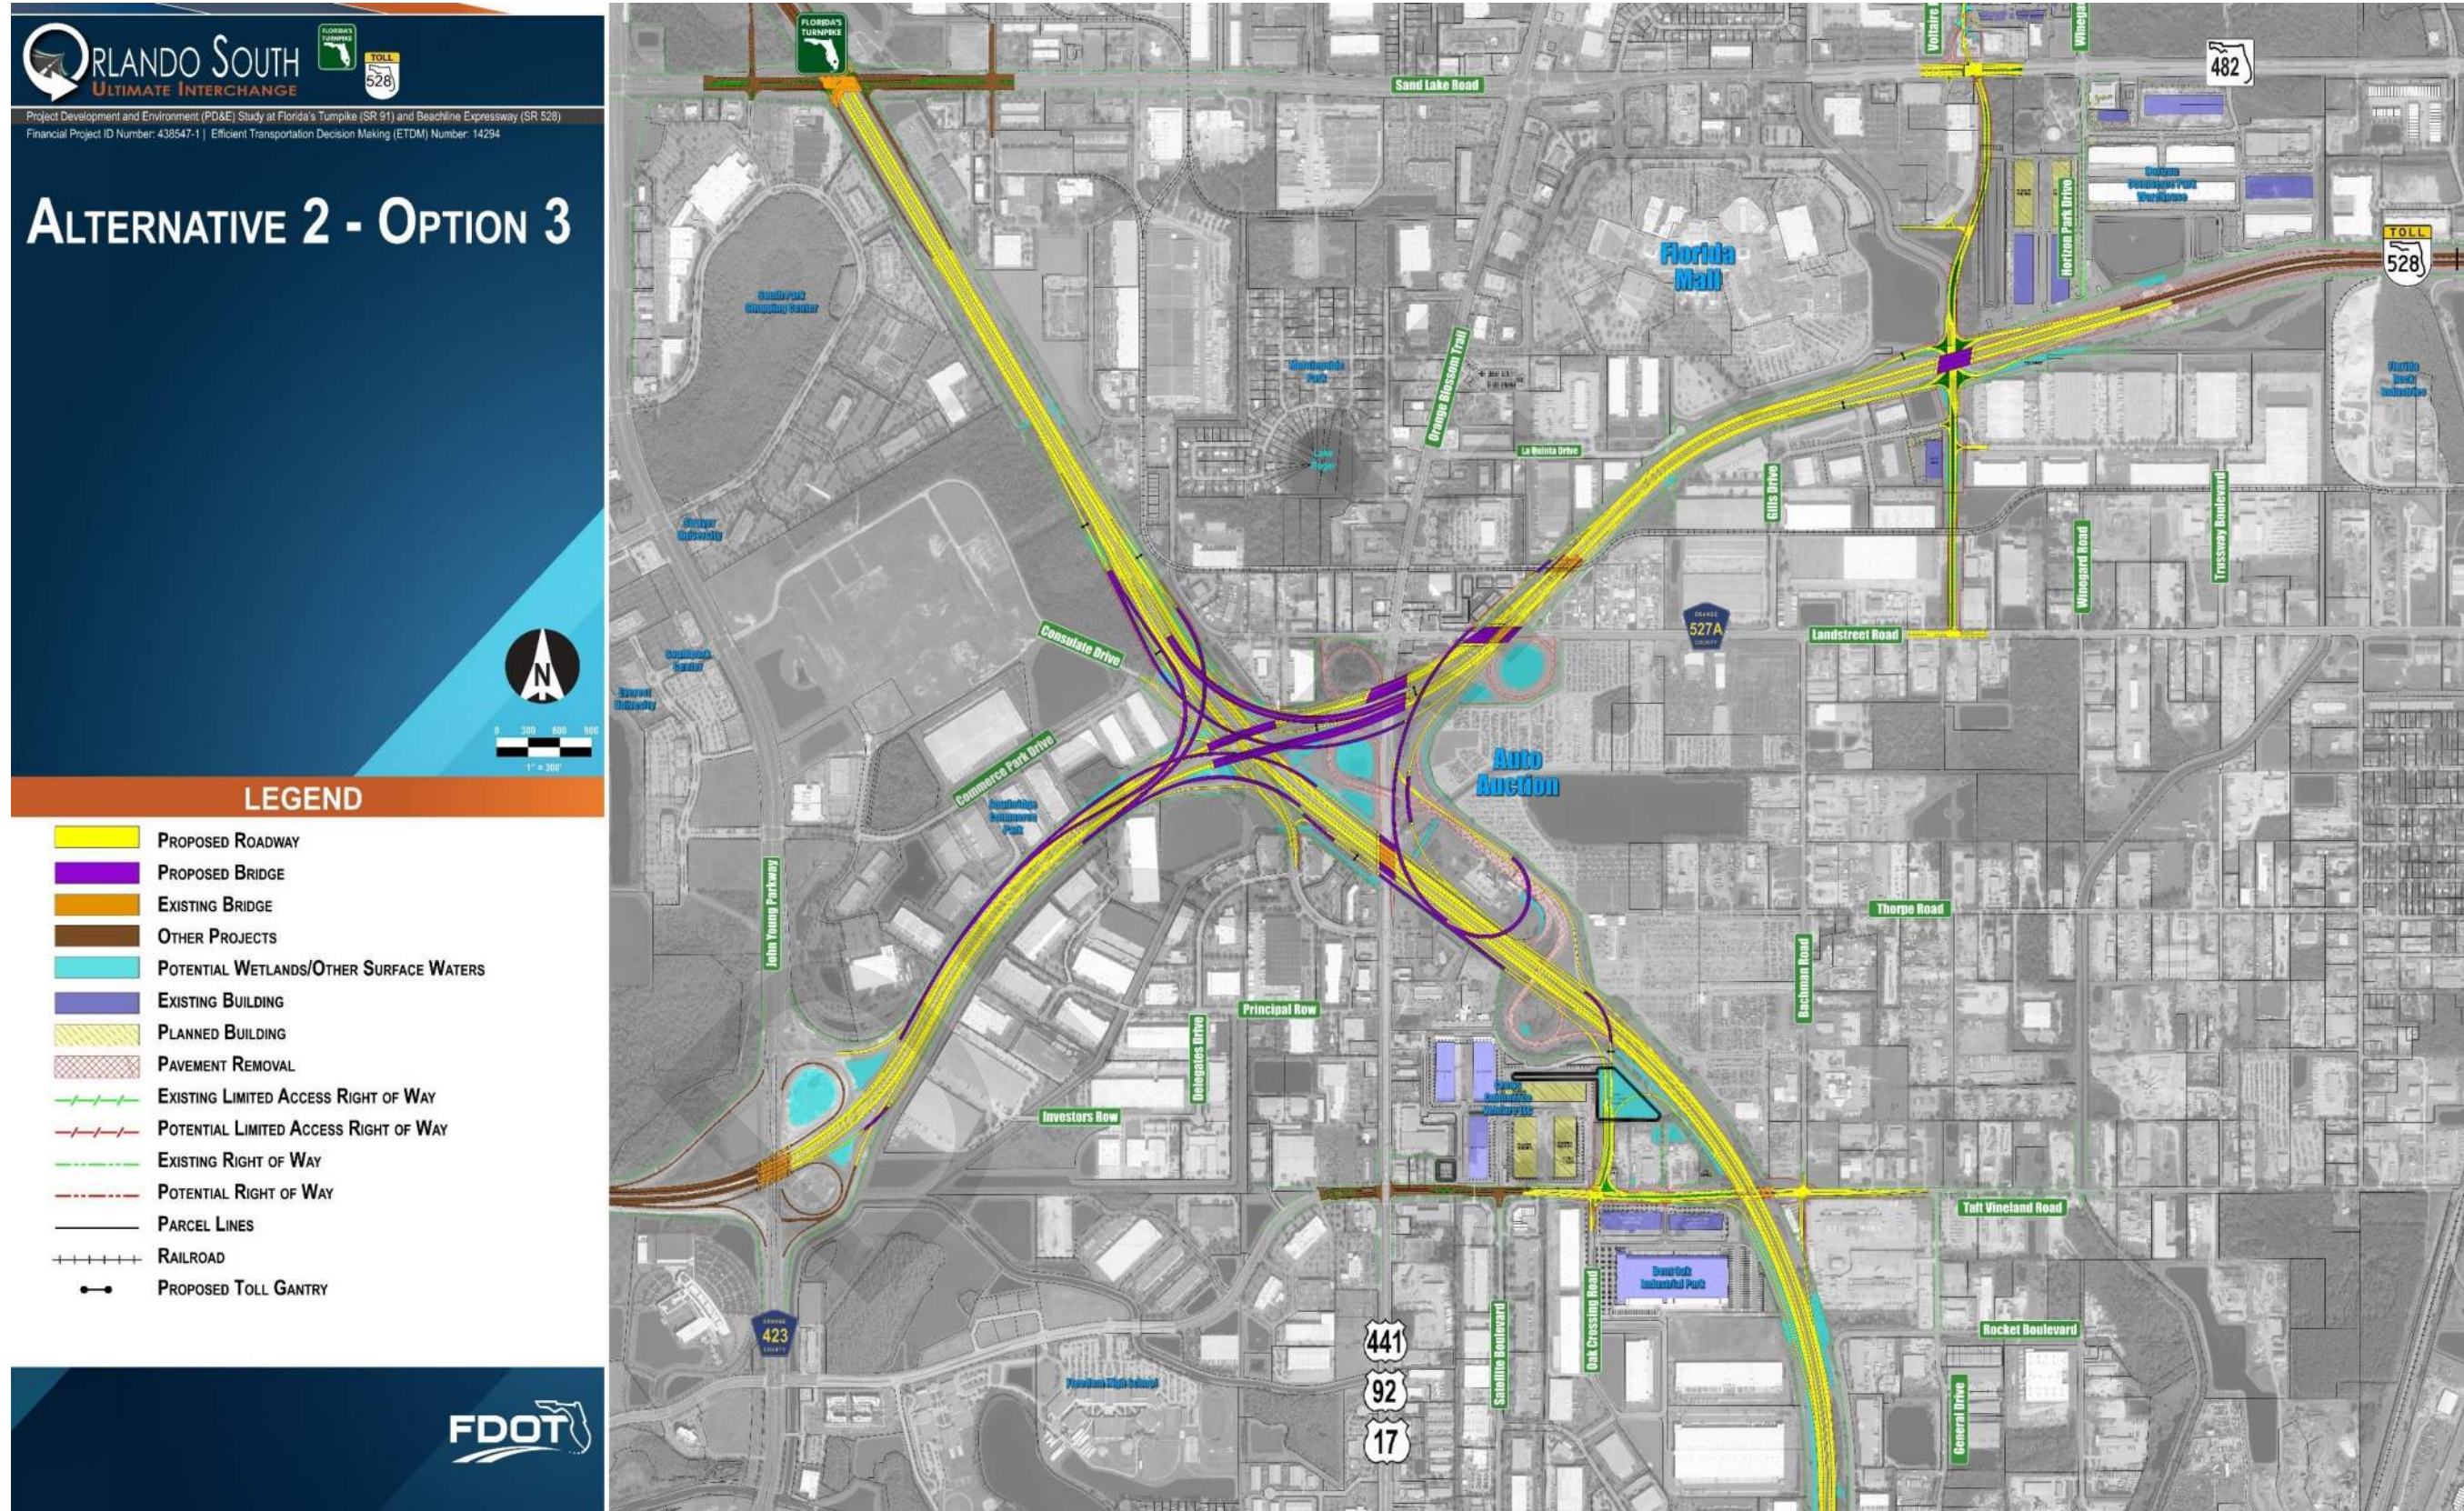

The three viable alternatives were displayed for public comment on January 29, 2019, at a Public Information Meeting held at the University of Central Florida (UCF) Rosen College of Hospitality Management, 9907 Universal Boulevard, Room 124, Orlando, FL 32819.

At the end of the Public Information Meeting, there was a preference for a modified Alternative 2 that includes the Option 1 interchange for the Florida's Turnpike reliever interchange and Option 2 for the Beachline Expressway reliever interchange. This combined alternative was designated as Alternative 2 - Option 3 and is shown in **Figure -2-4: Build Alternative 2 – Option 3**.

After the Public Information Meeting, further refinement was made to Alternative 2 – Option 3 to reduce right of way impacts and improve the overall design. The following refinements that impacted right-of-way were made either before or in conjunction with the formal Value Engineering review:

- The express direct connections connecting WB Beachline Expressway to NB Turnpike and SB Turnpike to WB Beachline were deleted due to high costs and impacts, and low anticipated usage. This change allowed for the southward shift of the WB Beachline expressway, substantially reducing impacts to the northside of the Beachline expressway.
- To address anticipated queuing from the Sand Lake Road interchange, a NB Collector distributor road was added. The eastern retaining wall of the collector distributor road is 16 feet clear of the existing right-of-way. Thus, the only impacts associated with this improvement is an existing FGT line.
- The SB Turnpike to NB Orange Blossom Trail flyover was removed from the project, and this traffic must use the exit to Consulate Drive to access Orange Blossom Trail NB. To address the additional traffic, the Consulate Drive/Orange Blossom Trail intersection was modified to increase efficiency. These improvements included access management modifications, a third EB left-turn, and a turbo configuration. There are no right of way impacts associated with these changes.
- The Voltaire Drive Extension interchange was reconfigured from a SPUI to a Tight Urban Diamond Interchange (TUDI) to reduce impacts. The profiles were modified such that the Beachline expressway remains at grade. Minor alignment modifications were added on Voltaire Drive North of Sand Lake Road to reduce impacts.

Figure 2-4
Build Alternative 2 – Option 3

SECTION 2.0 – PROJECT ALTERNATIVE

- The Taft Vineland Road interchange was modified to reduce access impacts, west of the Turnpike. In addition, the EB to SB ramp was modified to eliminate right of way acquisition in the southwest quadrant. East of the Turnpike, the NB exit and the transition to the existing 2-lane Taft Vineland Road was modified to minimize impacts. However, approximately seven extra feet of right of way is required along the west side of Bachman Road to add a turn lane.

This preferred alternative includes the refinements described above and is shown on **Figure 2-5: Build Alternative 3**.

2.2.4 Stormwater Management Ponds

Documentation of stormwater management improvements necessary to address the environmental permitting program in Florida is provided in the Pond Siting Report (December 2019) developed for the project. This report includes an evaluation of stormwater pond alternatives and recommendations to meet permitting requirements. The preferred option (Pond Option 2) discusses a total of 20 pond sites for stormwater management. The size and contamination potential of these sites are provided in **Table 2-1: Proposed Stormwater Management Sites**. The locations of these sites are shown in **Figure 2-6: Proposed Stormwater Management Sites**. These proposed sites were reviewed and assessed as part of this report, and the results of this assessment are included in the report findings.

Table 2-1
Proposed Stormwater Management Sites

Pond Number	Acreage	Contamination Risk Rating
1A	2.67	High
1B	4.77	High
1C	1.20	High
1D	1.82	High
3/4	4.27	Medium
6A	1.81	Low
6B	4.05	Low
6C	1.35	Low
7	7.00	Low
8	4.87	Low
9	2.93	Low
10	8.65	Low
11	6.05	Low

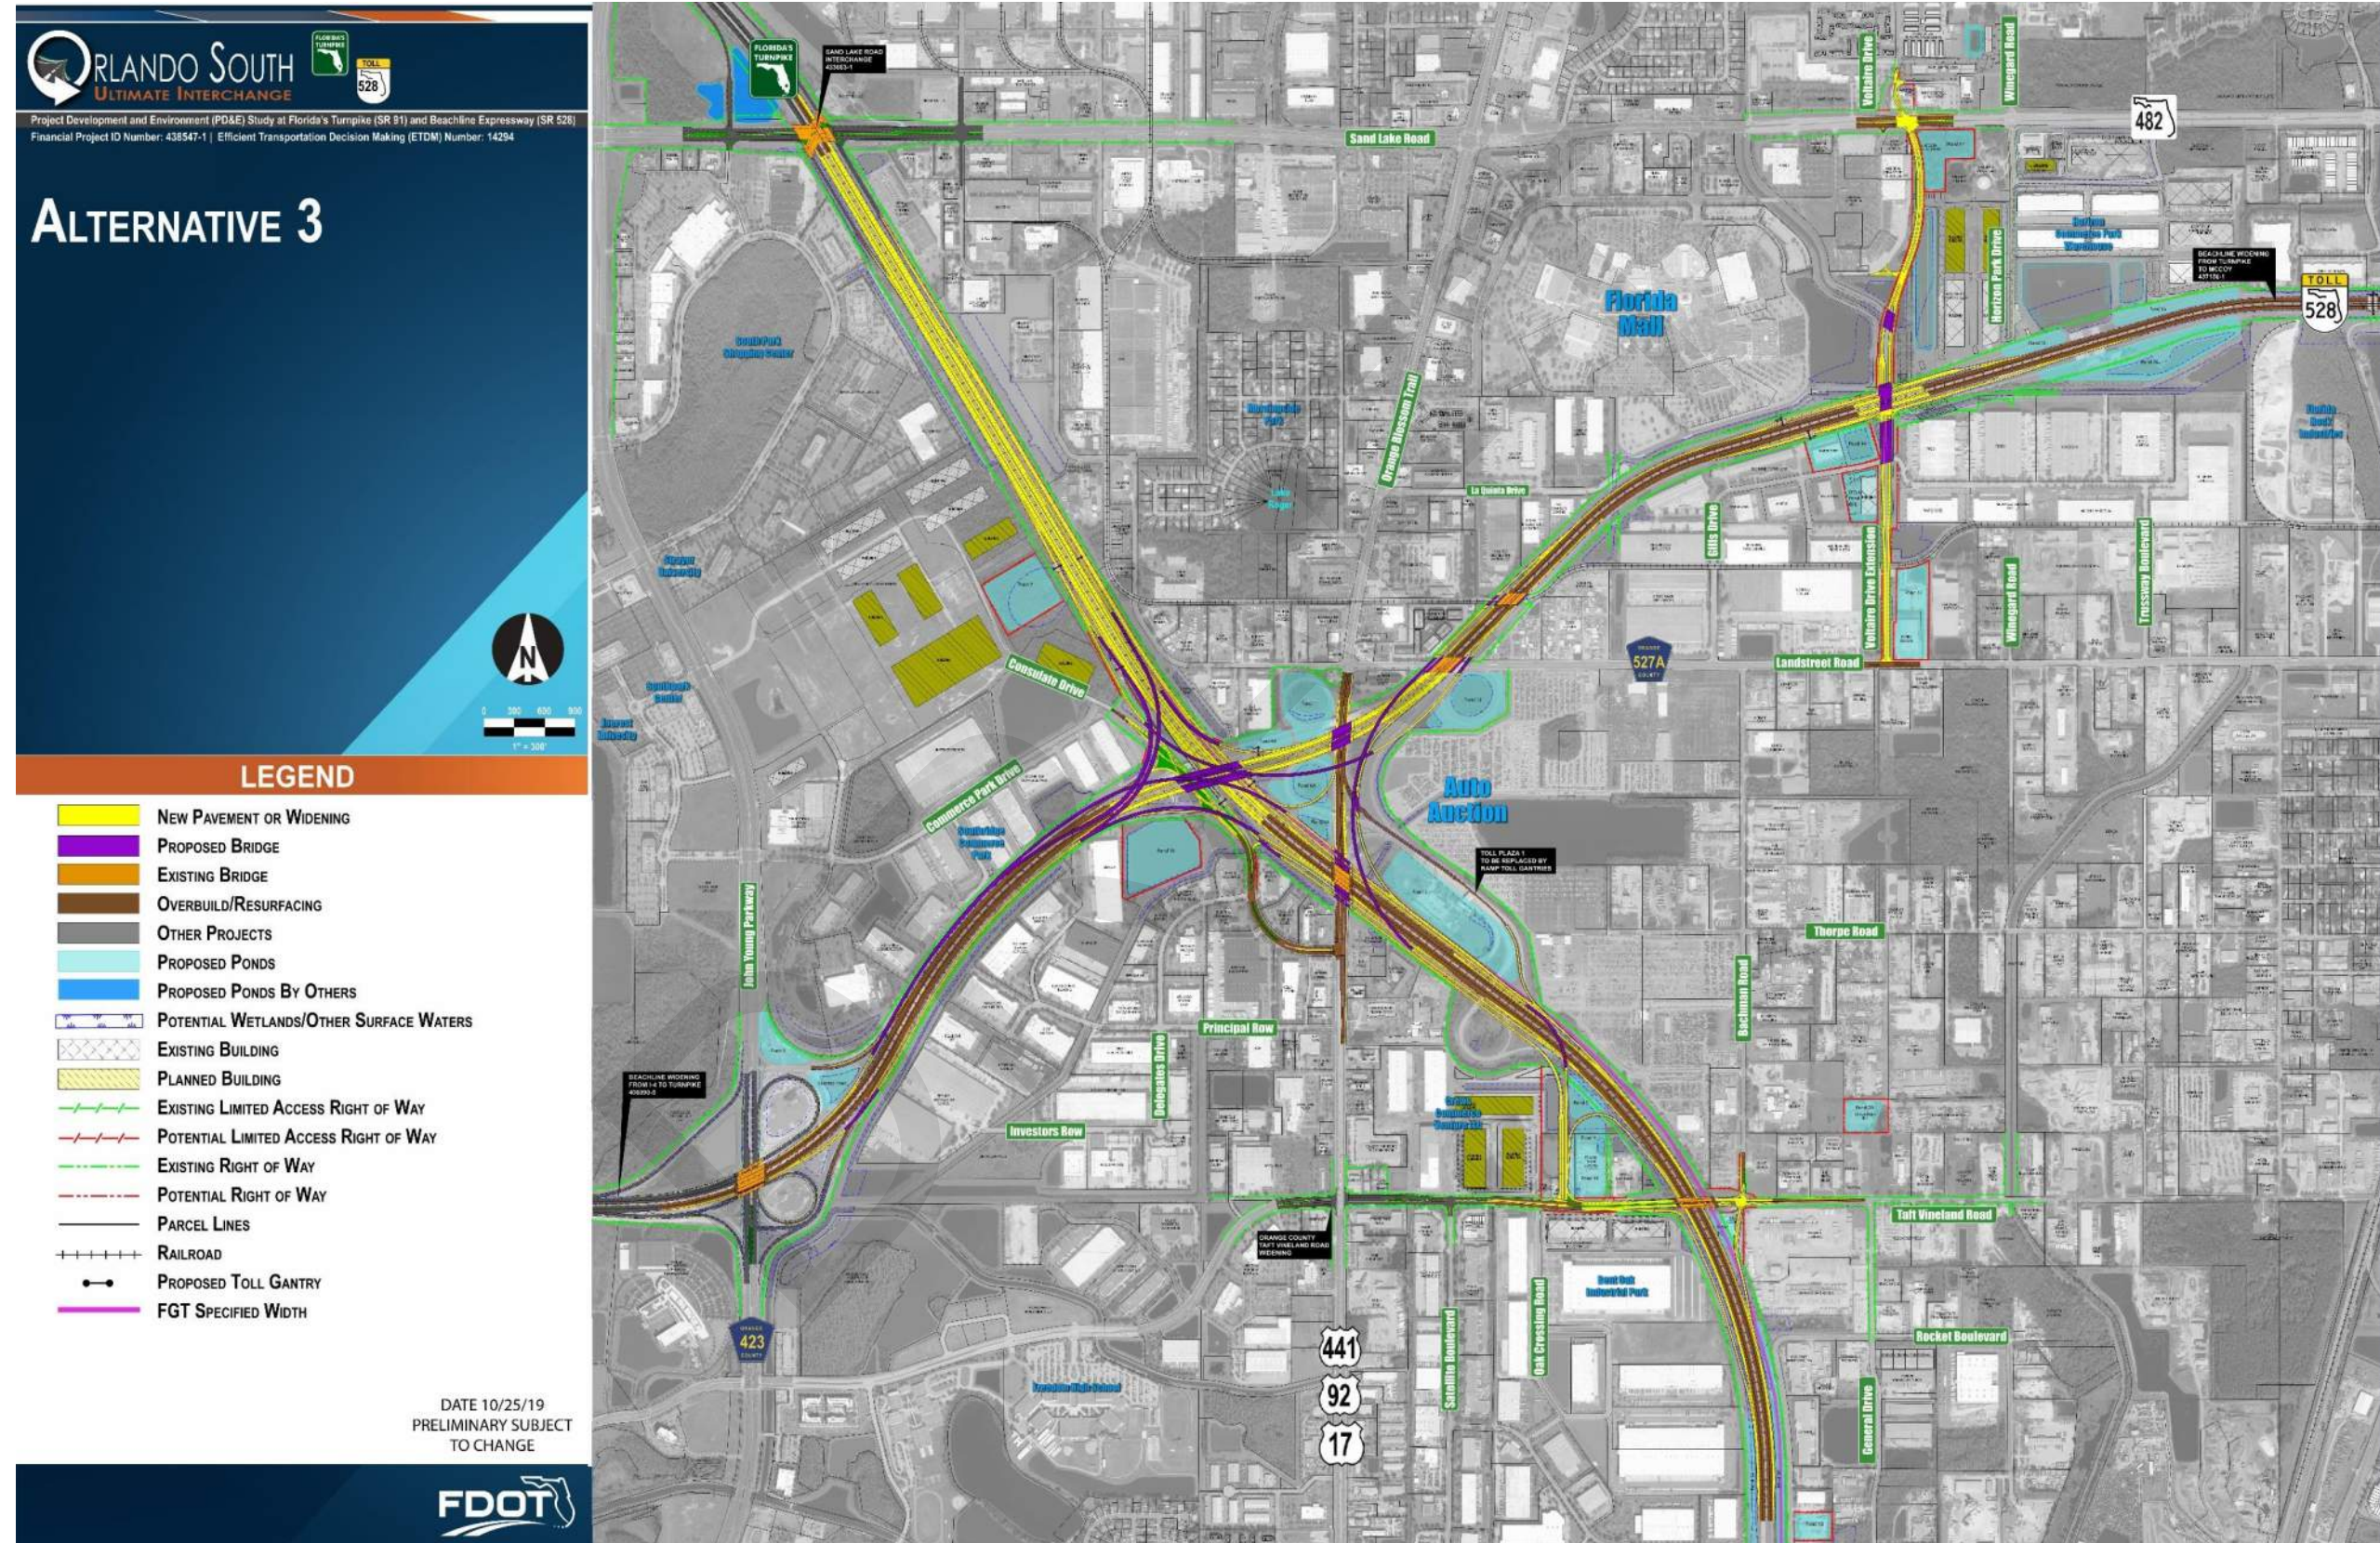

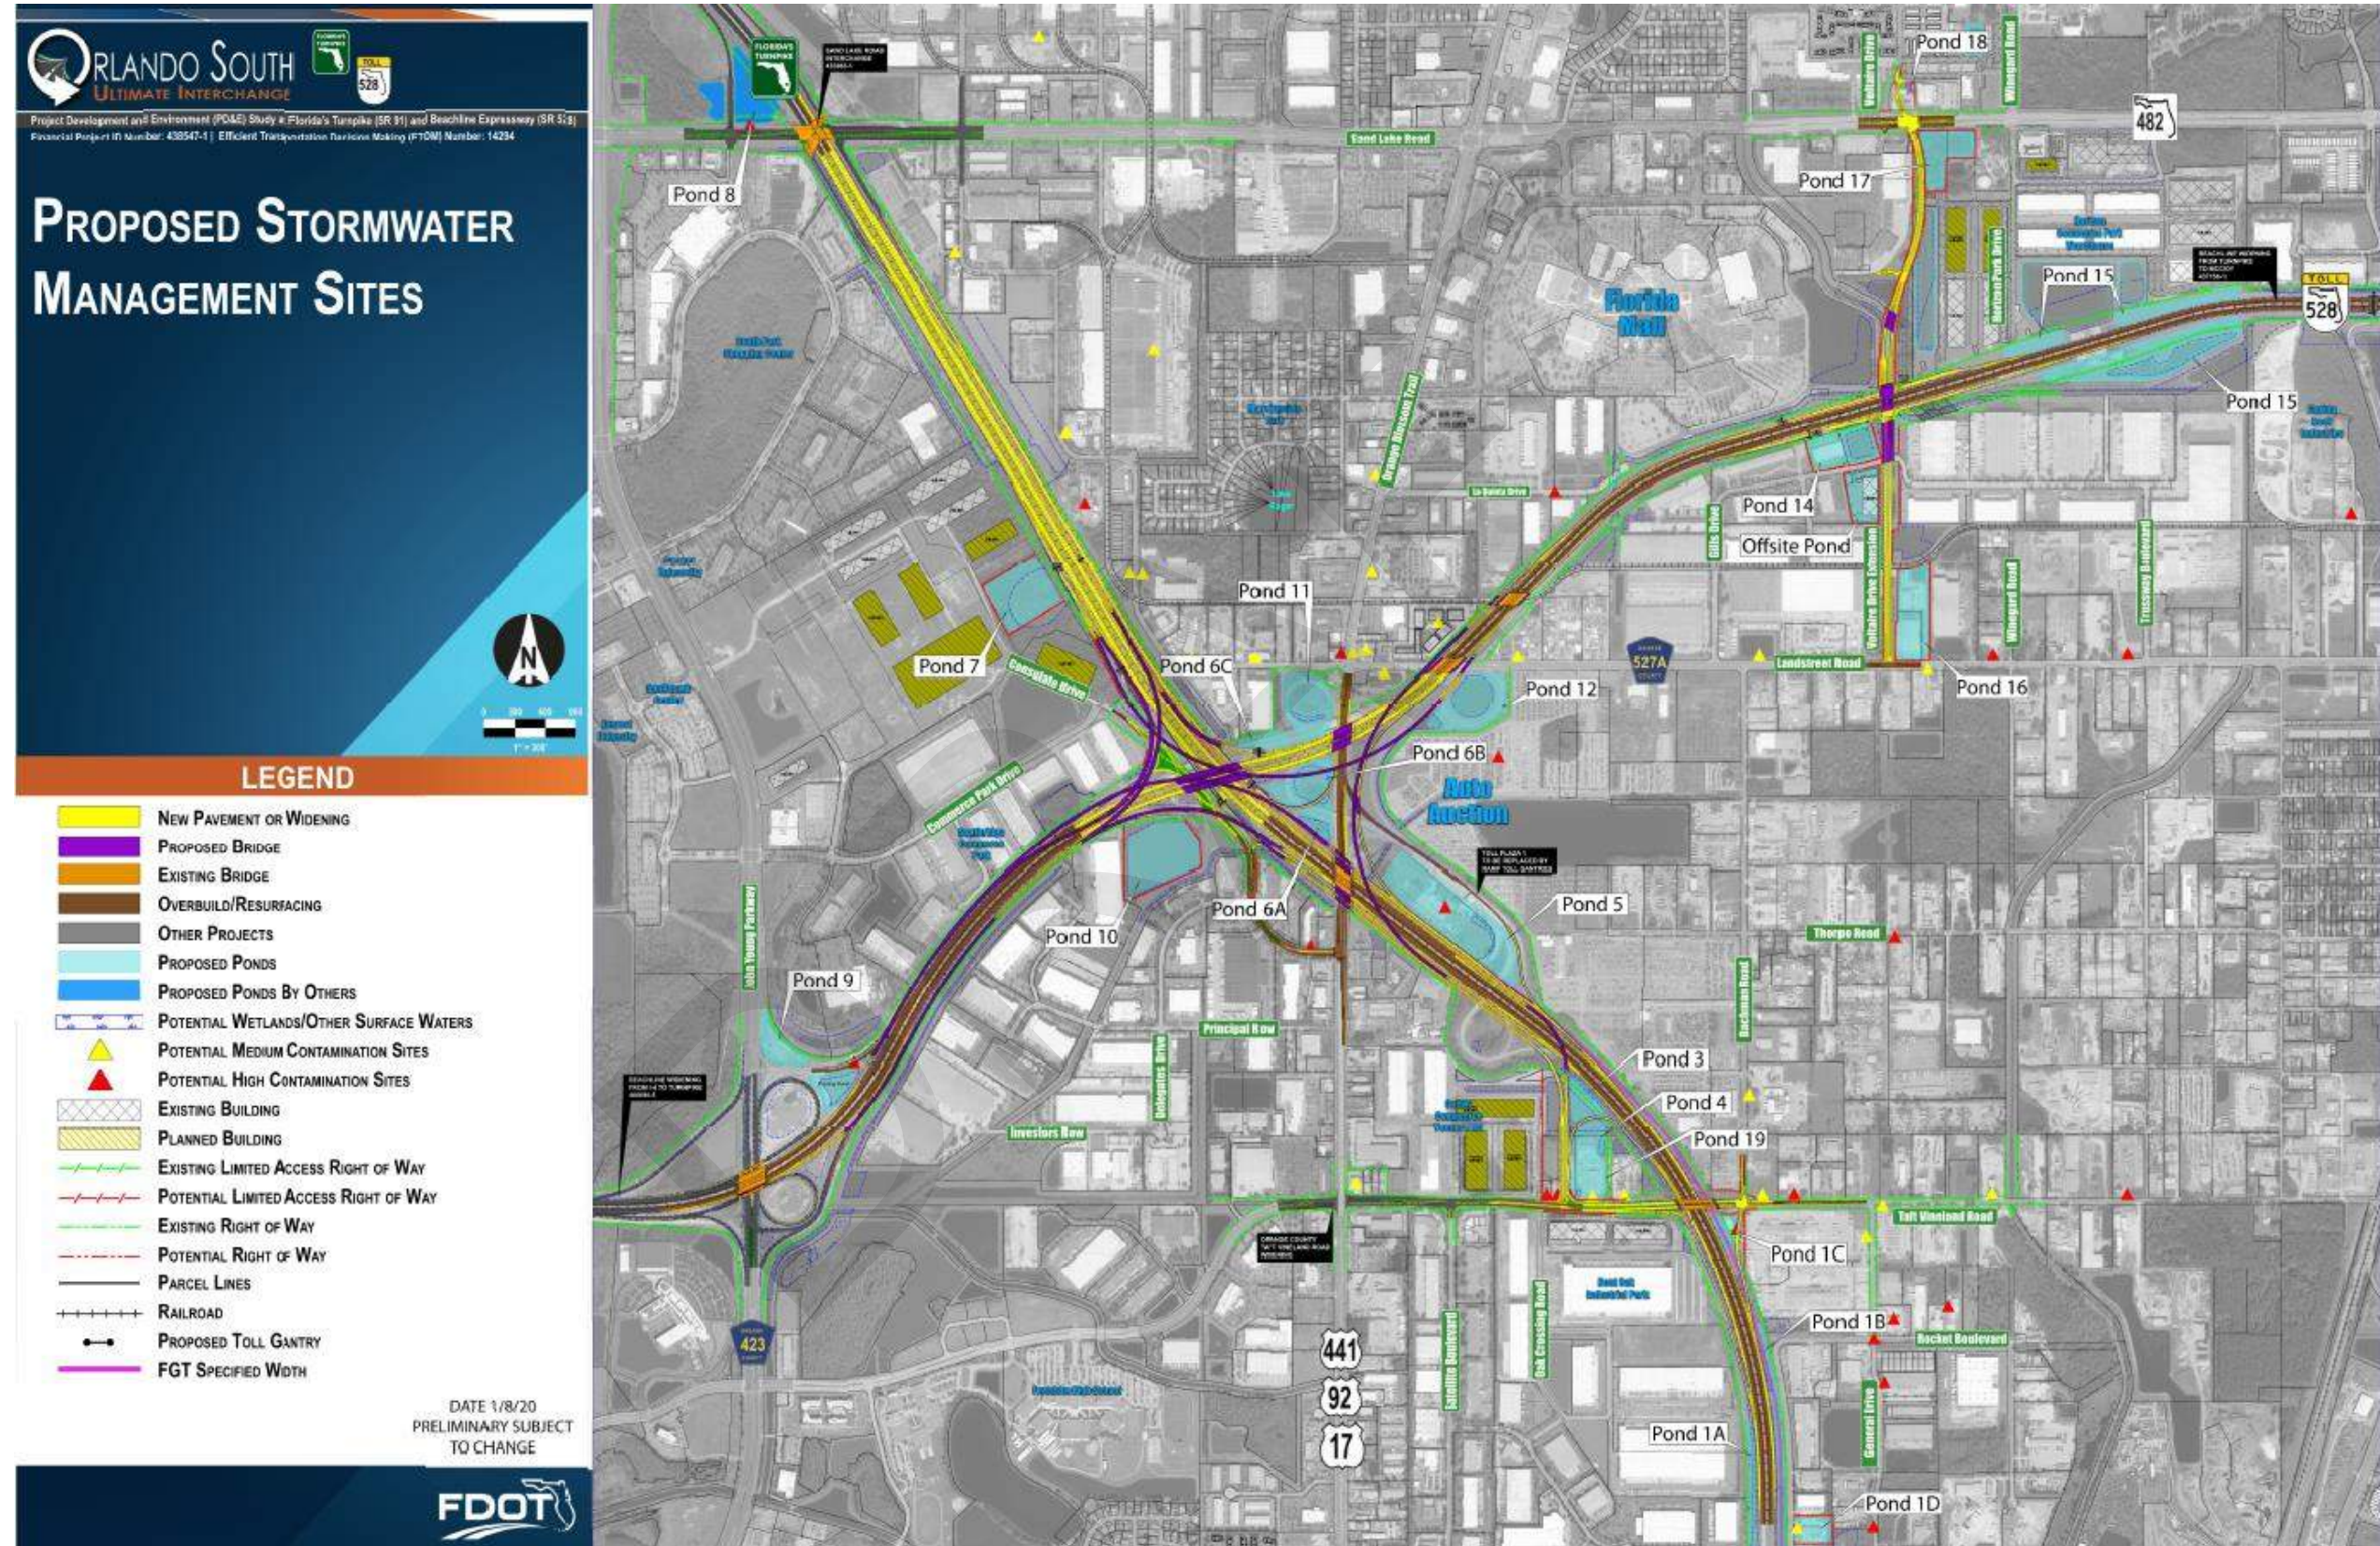

Figure 2-6
Proposed Stormwater Management Sites

3.0 PURPOSE OF REPORT

Federal Highway Administration (FHWA) Technical Advisory T 6640.8A (dated October 30, 1987) contains the following guidance on the evaluation of contamination and hazardous waste as it pertains to highway planning and environmental review:

"Hazardous waste sites are regulated by the Resource Conservation and Recovery Act (RCRA) and the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). During early planning, the location of permitted and non-regulated hazardous waste sites should be identified. Early coordination with the appropriate Regional Office of the US Environmental Protection Agency (US EPA) and the appropriate State agency will aid in identifying known or potential hazardous waste sites. If known or potential waste sites are identified, the locations should be clearly marked on a map showing their relationship to the alternatives under consideration. If a known or potentially hazardous waste site is affected by an alternative, information about the site, the potential involvement, impacts and public health concerns of the affected alternative(s) and the proposed mitigation measures to eliminate or minimize impacts or public health concerns should be discussed in the Draft Environmental Impact Statement (EIS).

If the preferred alternative impacts a known or potentially hazardous waste site, the Final EIS should address and resolve the issues raised by the public and government agencies."

To implement this guidance, Florida Department of Transportation (FDOT) developed Part 2, Chapter 20 of the Project Development & Environment (PD&E) Manual (revised January 14, 2019), which identifies and explains the purpose, process and procedure by which environmental contamination screening for a project under the jurisdiction of FDOT should be conducted. This Contamination Screening Evaluation Report (CSER) has been prepared for the project's preferred build alternative (Alternative 3) in accordance with the applicable guidelines as stated within Part 2, Chapter 20 of the FDOT PD&E Manual.

Importantly, this evaluation is prepared as a "Level I" analysis and does not involve any sampling or testing of environmental contaminants or other media.

4.0 ASSESSMENT METHODOLOGY

This section describes the methodology and sources of information used and developed in support of this Contamination Screening Evaluation Report (CSER). The process by which the identified sites are screened and categorized for contamination risk, as well as the results of the analysis, are also provided.

4.1 Guidance

As discussed in **Section 3** (Purpose of Report), this CSER has been prepared in accordance with Florida Department of Transportation (FDOT) Project Development & Environment (PD&E) guidance. As such, and for the purposes of this report, it is conducted as a “Desk-Top” (or Level I) analysis of potential sites of environmental contamination in the vicinity of the project’s preferred alternative, Alternative 3 (as discussed in **Section 2.2.3** and shown in **Figure 2-5: Build Alternative 3**). It is not intended to be used in place of Levels II or Level III evaluations that involves more detailed investigations. The individual components by which the evaluation was undertaken are discussed separately as follows:

4.2 CSER Study Area

As discussed in **Section 1 Project Summary** and shown above in **Figure 1-1: Project Location Map**, the Orlando South Ultimate Interchange study limits encompass Florida’s Turnpike (SR 91) from south of Taft Vineland Road to Sand Lake Road (SR 482) and the Beachline Expressway (SR 528) from John Young Parkway (CR 423) to east of the Beachline West Toll Plaza.

In accordance with FDOT guidance, the “search distances” (i.e., contamination screening buffers) vary depending on the context of the project and type of contamination source. The following search (or “buffer”) distances from the project right-of-way lines were as follows:

- **500 feet** - was used for petroleum (such as current and former gas stations, underground and above ground storage tanks), drycleaners and certain non-petroleum sites (e.g., dry cleaners).
- **1,000 feet** – was used for non-landfill solid waste sites (such as recycling facilities, waste and chemical transfer stations and debris placement areas).
- **½ Mile** – was used for Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), National Priorities List (NPL) or landfill sites.

Because the project also involves a number of stormwater pond locations, these same buffer distances were used from the closest edge of the proposed pond locations.

4.3 Land Uses

Overall, the current land-use in the project area (**see Appendix A**), is generally characterized as medium-to-highly densely developed with a few comparatively smaller areas that are either

SECTION 4.0 – ASSESSMENT METHODOLOGY

vacant or sparsely developed. Water bodies consist mainly of isolated stormwater detention ponds or wetlands. There is little area that remains undeveloped or is in a natural state.

The predominant land uses are categorized as follows within one-half mile of the project right of way:

- Warehousing – 26%
- Commercial – 13%
- Manufacturing – 9%
- Industrial – 7%
- Residential – 7%
- Automotive – 5%
- Offices – 4%
- Waterbodies/Wetlands – 4%
- Other (Religious, Federal/State-Owned, Roadways, Utilities, etc.) – 25%

Land uses within the four quadrants of the interchange are summarized as follows:

- **Northeast Quadrant:** This area contains single- and two-story office buildings, warehouses and single-family residential areas. The most predominate feature is the Florida Mall.
- **Southeast Quadrant:** This area is largely developed by warehousing and distribution centers as well as a variety of auto and machine repair shops. The dominant land use are the auto auction businesses and their parking lots.
- **Southwest Quadrant:** Land-use in this area is similar to the southeast quadrant but with newer buildings and infrastructure. Notably, this area is also absent of any auto auctions or other large-scale features.
- **Northwest Quadrant:** This area consists mostly of modern office parks and some warehousing. The dominant feature is a large vacant area formally occupied by institutional land-use.

The land use within both of the two areas identified on **Figure 1-1: Project Location Map** for potential new interchanges is commercial/industrial. The area east of the Florida's Turnpike and John Young Parkway (CR 423) interchange is mostly warehousing and office buildings. The highest density of land use is near the junction of Florida's Turnpike and Beachline Expressway. This area is presently occupied with restaurants, gas stations and a range of other commercial businesses.

4.4 Agency Records

An electronic database search of federal, state and local agency records was undertaken along the project corridor and around the project study area. Paramount among the land uses, sites and facilities sought in this search are landfills, leaky underground storage tanks (LUST), large quantity generators (LQG) of hazardous materials and spills of other potential environmental contaminants. To the extent railroad-related land uses and activities occur, and are reported upon within the

study area, their potential contamination impacts are assumed to be included in the agency records search.

Prepared by Environmental Data Resources (EDR) Inc. and commonly referred to as an “EDR Report”, the search parameters were based on the “buffer” distances and land-uses described above. The list of search parameters is provided in **Appendix B**. Contained in **Appendix C (Under Separate Cover)**, the data and information obtained from this report serves as the “mainframe” upon which this CSER is undertaken. Among the 45+ environmental agency records included within this search; the following are some of the most significant:

- U.S. EPA NPL, Delisted NPL and Proposed NPL
- U.S. EPA ECHO
- Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)
- CERCLIS No Further Remedial Action Planned (CERCLIS-NFRAP)
- Resource Conservation and Recovery Act Corrective Action Report (RCRA CORRACTS)
- RCRA Treatment, Storage and Disposal Facilities List (RCRA TDS)
- Florida State-Funded Action Sites (SHWS)
- Solid Waste Facility Database (SWF/LF)
- Emergency Response Notification System (ERNS)
- Dry Cleaning Facilities
- Federal, State and Tribal Underground/Aboveground Storage Tank Databases (UST/AST)
- Federal, State and Tribal Leaking Underground Storage Tank Lists (LUST)

Further, data published directly by state and local agencies such as the Florida Departments of Health (FDOH) and Florida Department of Environmental Protection (FDEP) were also consulted (e.g., Map Direct, Oculus, State Underground Petroleum Environmental Response Act [SUPERAct] Risk Sources, Storage Tank Compliance Monitoring [STCM], and Petroleum Contamination Tracking System [PCTS]).

Overall, 162 sites were identified, though many of them were viewed as little relevance to the analysis because of their distances from the proposed project. In other cases, there were duplicates of the same sites or the site descriptions were clearly irrelevant to the study and they too were eliminated from further analysis.

For ease of review, the remaining sites were plotted on up-to-date aerial photographs and maps of the study area and the accompanying EDR data were organized into spreadsheets listing the names, locations (e.g., addresses and coordinates) and agency data bases from which site-specific information is contained.

4.5 Aerial Photos & Maps

As an aid in identifying past and current land-uses that have the potential for causing environmental contamination in the vicinity of the project, historic aerial photos and maps of the study area were reviewed. Obtained as part of the EDR Report, these photos (both black & white and color) provide a visual high-altitude ~5,000 feet view of natural (e.g., water bodies, forests, fields) and man-made features (e.g., roads, developments, buildings). Recent and past maps (e.g., U.S. Topographical Maps) of the study area were also reviewed. These photos and maps span a roughly 70-year period from 1950 to 2019. These documents are contained in **Appendix D** and summary descriptions are provided below in **Table 4-1: Historical Aerial Photographs Review** and **Table 4-2: Historical Topographic Maps Review**.

Table 4-1
Historical Aerial Photographs Review

Year	Description
2017	Land-uses and roadways appear to be mostly unchanged compared to present conditions. One exception is the construction of an access/egress ramp on Florida's Turnpike south of the Beachline Expressway.
2013	Land uses appear to be unchanged from 2017 conditions.
2010	New warehousing adjacent to the Beachline Expressway, west of Florida's Turnpike. The area west of Florida Mall on the eastern leg of the Beachline Expressway remains undeveloped.
2007	Land-uses appear to be similar to the 2010 photo.
1999	Land-uses appear to be the same as the 2007 and 2010 photos.
1995	Undeveloped land and natural area are prevalent in the NW and SW quadrants of the interchange. Similar conditions (with agricultural uses) exist along the southern leg of the Florida's Turnpike and the eastern and western legs of the Beachline Expressway.
1990	With scattered light developments, the majority of land is undeveloped and exists as natural or agricultural areas. The site of the FDOT facility on the Florida Turnpike is visible.
1984	Conditions appear similar to the 1990 photo with no development in the SW quadrant of the interchange.
1978	Conditions appear the same as the 1984 photo and with no development in NW quadrant, cleared land in the SE quadrant and the Florida Mall is not present.
1973	Conditions appear the same as the 1978 photo with the addition of the access/egress ramps to the Florida's Turnpike.
1969	Conditions appear to be similar to the 1973 photo but with no Beachline Expressway.
1954	Conditions appear to be similar to the 1969 photo with no Florida's Turnpike. Orange Blossom Trail is the only major roadway and the area is nearly in an all-natural state.
1950	Conditions appear to be similar to the 1954 photo.

Source: EDR Historical Topo Map Report, Orlando South Interchange and KB Environmental Sciences, Inc. 2019.

Information obtained from the historical maps is summarized as follows and is consistent with the aerial photos discussed above.

Table 4-2
Historical Topographic Maps Review

Date	Description
2019	The surface transportation network including freeways (Florida's Turnpike, Beachline Exp.), Arterials (e.g., Sand Lake Rd., Landstreet Rd.) and surface streets are shown as they are presently.
2012	The map shows conditions largely as they are depicted in the 2019 map.
1980	This map shows far fewer building and no John Young Parkway when compared to the 2012 map.
1970	This map shows mostly natural land and water bodies, fewer buildings and no Beachline Expressway when compared to the 1980 map.
1953	This map shows nearly all-natural land in the study areas and no major roadways with the exception of the Orange Blossom Trail.

Source: EDR Historical Topo Map Report, Orlando South Interchange and KB Environmental Sciences, Inc. 2019.

From the review of the historical aerial photographs, there are several observations that are relevant to the potential for environmental contamination impacts associated with the project. These include the following:

- **Pre-1984:** Prior to 1984, the area was mostly undeveloped and existed as natural land with isolated water bodies and limited agricultural use. From 1990 to 1995 scattered development begins in the vicinity of the interchange but natural and agricultural uses are the most prevalent. Over both time periods, agricultural activities largely involved livestock grazing and some citrus groves.
- **Post-1995:** The level of land development increases beginning about 1995 with the most concentrated areas extending outward from the junction of the interchange.
- **Historic Land-use Types:** Historically, early land-uses consisted of transportation and light agricultural uses. By the mid-90's, land development accelerated and is much as it is under current conditions.

Importantly, there were no apparent land-uses in the project area that involved significant landfilling, mining, waste treatment or other potential sources of large-scale environmental contamination.

4.6 Site Reconnaissance/Field Review

In-the-field surveys and site visits were conducted of the project study area with the primary aim of accomplishing three objectives: (i.) observe and verify sites and conditions previously identified in the EDR data base, aerial photos and maps; (ii.) update, append and/or correct existing information and (iii.) locate and evaluate sites that were not previously identified. Completed in October (2019), the principal outcomes of the field work are stated as follows:

- **Land-use:** The current land-uses are largely characterized as warehousing, light manufacturing, commercial and office space (**see Section 4.3**). Particularly notable among these land-uses are the used-car auction parking lots, freight storage and truck transport

facilities and automotive repair shops located along the outer segments of the Florida's Turnpike and Beachline Expressway interchange. The density of land use, primary made up of fast-food restaurants, gas stations, etc. occurs closer to the center of the interchange. There is comparatively little undeveloped or natural land along the project corridor.

- **EDR Report:** The information and data contained in the EDR Report is mostly consistent with what was observed in-the-field (**see Section 4.4**). However, in some cases, the business names have changed, the addresses were not correct and/or the named site was not observed.
- **Aerial Photos/Maps:** The historical aerial photos and maps appeared to accurately depict the conditions expected from their review and analysis (**see Section 4.5**).
- **Contamination Risk-Rating System Categorizations:** As discussed below in **Section 4.9**, sites representing potential contamination impacts to the proposed project are assigned Risk Categories based on the FDOT Contamination Risk-Rating System (e.g., No, Low, Medium, High). In some cases, the initial categories were revised (e.g., Medium to Low) based on observations made in the field.

It is noteworthy that in many cases, the field surveys revealed information about individual sites that is best obtained from "first-hand" observations and not disclosed in the regulatory agency data or historical photo reviews.

4.7 Interviews

Because sufficient information was collected to identify sites meeting the High and Medium classifications, interviews were not conducted.

4.8 Hydrologic Features

The United State Geologic Survey (USGS) Topo Maps depict the land elevations along the project corridor, ranging from 80 to 95 feet above sea level (a change of relief of 15 feet or less). Therefore, the area is relatively flat and without deep trenches, valleys, hills and other large landforms. The overall surface drainage flow is to the north in the direction of the St. John's River.

The surface water features in the project area are mostly comprised of stormwater retention ponds of varying size and shapes. Lakes Elenore and Christie to the north and Whisperwood Lake to the southwest are the two largest named lakes.

The project area, like much of Orange County, is underlain by three hydrographic units consisting (from shallowest to deepest) of the surficial aquifer (the intermediate aquifer and the Floridan aquifer). The depth to shallow groundwater is approximately two feet below land surface. The surficial aquifer is roughly 25 to 90 feet thick and is used mostly for irrigation purposes.

Because of the relatively level terrain and underlying water tables in the project area, the widespread migration of environmental contaminants through runoff and surface and ground

waters it is reduced. Characteristically, environmental contaminants are contained locally under these topographic and hydrologic conditions, although exceptions can occur on a case-by-case basis.

4.9 Contamination Risk-Rating System Categorization

As stated previously, the purpose of this assessment is two-fold: (i.) to identify known, or potential, sites of environmental contamination in the vicinity of the project, and (ii.) categorize the sites based on the FDOT PD&E Contamination Risk-Rating System for the potential to cause contamination impacts associated with the project. In accordance with this system, the sites were evaluated according to the four following criteria:

1. **No** - A review of available information on the property and a review of the conceptual or design plans indicates there is no potential contamination impact to the project. It is possible that contaminants had been handled on the property. However, findings from the contamination screening evaluation or sampling and testing results indicate that contamination impacts are not expected.
2. **Low** - A review of available information indicates that former or current activities on the property have an ongoing contamination issue, has a hazardous waste generator identification (ID) number, or handles hazardous materials in some capacity. However, based on the review of conceptual or design plans and/or findings from the contamination screening evaluation or sampling and testing results, it is not likely that there would be any contamination impacts to the project.
3. **Medium** - After a review of conceptual or design plans and findings from a contamination screening evaluation, a potential contamination impact to the project has been identified. If there is insufficient information (such as regulatory records or site historical documents) to make a determination as to the potential for contamination impact, and there is reasonable suspicion that contamination may exist, the property should be rated at least as a "Medium". Properties used historically as gasoline stations and which have not been evaluated or assessed by regulatory agencies, sites with abandoned in place underground petroleum storage tanks or currently operating gasoline stations should receive this rating.
4. **High** - After a review of all available information and conceptual or design plans, there is appropriate analytical data that shows contamination will substantially impact construction activities, have implications to right-of-way acquisition or have other potential transfer of contamination related liability to the FDOT.

As also discussed above, this evaluation was conducted following a set of standard practices including (but not limited to) an electronic search of environmental agency databases; a review of current and historical aerial photography and maps; and in-the-field reconnaissance of the project area. Using the data and information collected during the course of the investigation, each site was categorized according to the above-mentioned system.

5.0 PROJECT IMPACTS

An overall total of 162 sites were identified and evaluated. The vast majority are categorized as either “No” or “Low” risks primarily due to the following reasons: (i.) the reported involvement with hazardous wastes, fuel and/or other regulated substances minimal and/or (ii.) the distances and directions between the site and the project likely preclude significant impacts.

The following provides an overview of the main outcomes of this analysis, summarized according to the Florida Department of Transportation (FDOT) Contamination Risk-Rating System.

- **No/Low-Risk Sites:** There are 144 sites that are considered to have no or little likelihood of posing environmental contamination problems to the project. These sites are reported to have past and/or current land uses, regulatory records or other indicators of hazardous materials, spills or together potential sources of environmental contamination. However, this information combined with the distance and direction from the project preclude significant impacts. They typically comprise solid waste disposal facilities, hazardous waste generators and sites of minor spills.
- **Medium-Risk Sites:** There are 12 sites that are viewed as having the potential to pose contamination impacts on the project, but there is insufficient information to make a more definitive determination. However, based on what is known about the site, in combination with other relevant factors (e.g., land use, distance to the project, types of contamination), the risks of environmental contamination impacts to the project are reduced. These sites primarily include gas stations and other facilities with underground storage tanks (USTs) with reported spills and a light industrial facility. For these sites, it is recommended that more detailed investigations be conducted, as necessary, to further ascertain the potential impacts.
- **High-Risk Sites:** There are six sites that are determined to have a high likelihood of causing contamination impacts to the project. The findings are based on agency records of past environmental practices and incidents, site reconnaissance and proximity to the project. These sites include gas stations, motor vehicle leasing/service facilities with reported fuel spills, a waste recovery facility and an industrial facility. In all six cases, the primary risk stems from the potential for underground migration of contaminants through soil, surface and groundwater from the site to the project. For these sites, further evaluation of the potential impacts of contamination on the project are warranted in the form of Level II or III assessments.

Importantly, there were no sites identified in the project area that are listed on the U.S. EPA “Superfund” program, involved mining, waste treatment or constitute other large-scale sources of environmental contamination.

For ease of review, **Table 5-1: Medium- and High-Risk Contamination Categories Sites** provides a summary listing of the Medium- and High-Risk Contamination sites. This information includes the site I.D. number, the figure where it is located **Figures 5-2 through 5-6: Detail Views 1 to 6**, site name and address, agency databases from which site-specific information was obtained, distance from the right-of-way and other supporting information that describes the potential contamination risks to the project.

The following figures also show the locations of the sites within the study area and color-coded according to their contamination risk ratings. These six figures are described as follows:

- **Figure 5-1: Overview Map**, delineates the project boundaries with a comprehensive view of the Low, Medium and High sites shown. It also serves a guide to the five Detailed View figures that follow.
- **Figures 5-2 through 5-6 (Detail Views 1 to 6)**, provide “close-up” views of the project corridor, again with the sites shown as Low-, Medium and High. (Note: 1 inch = 1,000 feet, or approximately 0.2 miles.)
- **Figure 5-7: High and Medium Risk Site Photos** contains photographs of the High- and Medium Risk Sites.

Additional information and data on these sites are contained in **Appendix E**.

6.0 CONCLUSIONS AND RECOMMENDATIONS

This Contamination Screening Evaluation Report (CSER) has been prepared in accordance with the Florida Department of Transportation (FDOT) Project Development & Environment (PD&E) Manual as it pertains to the assessment of contaminated sites. The information provided in the report identifies known, or potential, sites of environmental contamination in the vicinity of the project's preferred alternative, Alternative 3 (as discussed in **Section 2.2.3** and shown in **Figure 2-5: Build Alternative 3**), and categorizes them based on the FDOT Contamination Risk-Rating System for the potential to cause contamination impacts associated with the project.

Based on this information, there are 18 sites (6 High-Risk and 12 Medium-Risk) that warrant further investigation. Of these sites, four stormwater ponds are located near High-Risk Sites and one pond is near a Medium-Risk Site.

In accordance with FDOT guidance, it is recommended that the High- and Medium-rated sites receive additional investigations in the form of Level II or III assessments. This follow-up work should be undertaken during the Project Design Phase and before right of way acquisition. In this way, the construction of the proposed roadway improvements will not worsen contamination conditions and preparations made to mitigate the potential impacts.

Finally, no CSER can wholly eliminate the uncertainty regarding the potential for environmental contamination in connection with a property, facility or site. Therefore, this evaluation is intended to reduce, but not eliminate, this uncertainty regarding the potential for environmental contamination impacts associated with the project based on the FDOT PD&E Manual.

APPENDIX B

**Environmental Data Report
Database Names and Descriptions**

Data Base	Definition
2020 CORRECTIVE ACTION	2020 Corrective Action Program List The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.
AIRS	Environmental Interest/Information System. The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.
AIRS (AFS)	AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
ASBESTOS	Asbestos sites
AST	Registered Aboveground Storage Tanks.
BROWNFIELDS	Brownfields are defined by the Florida Department of Environmental Protection (FDEP) as abandoned, idled, or underused industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination.
CDL	A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments
CLEANUP SITES	This listing includes the locations of waste cleanup sites from various programs. The source of the cleanup site data includes Hazardous Waste programs, Site Investigation Section, Compliance and Enforcement Tracking, Drycleaning State Funded Cleanup Program (possibly other state funded cleanup), Storage Tank Contamination Monitoring.
COMET	Transport of Hazard Waste
CORRACTS	CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.
DADE CO LW	The Liquid Waste Transporter permit regulates the transportation of various types of liquid and solid waste, including hazardous waste, waste oil and oily waste waters, septic and grease trap waste, biomedical waste, spent radiator fluid, photo chemical waste, dry sewage sludge, and other types of non-hazardous industrial waste. The Liquid Waste Transporter permits needed to protect the environment and the public from improperly handled and transported waste.
DRYCLEANERS	The Drycleaners database, maintained by the Department of Environmental Protection, provides information about permitted dry cleaner facilities.

DWM CONTAM	A listing of active or known sites. The listing includes sites that need cleanup but are not actively being working on because the agency currently does not have funding (primarily petroleum and drycleaning).
ECHO	ECHO: Enforcement & Compliance History Information. ECHO provides integrated compliance and enforcement information for about 800,000 regulated facilities nationwide
EDR DRY CLEANERS	The Drycleaners database, maintained by the Department of Environmental Protection, provides information about permitted dry cleaner facilities.
EDR GAS STATIONS	
ENG CONTROLS	A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.
ERNS	Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances
FINANCIAL ASSURANCE	Financial Assurance Information All owners and operators of facilities that treat, store, or dispose of hazardous waste are required to provide proof that they will have sufficient funds to pay for the clean up, closure, and post-closure care of their facilities.
FINANCIAL ASSURANCE 1	A list of hazardous waste facilities required to provide financial assurance under RCRA.
FINDS	FINDS: Facility Index System/Facility Registry System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).
HMIRS	Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.
ICIS	ICIS: Integrated Compliance Information System: The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.
IHW	TX Ind. Haz Waste: Industrial & Hazardous Waste Database Summary reports reported by waste handlers, generators and shippers in Texas.
INST CONTROL	The registry is a database of all contaminated sites in the state of Florida which are subject to institutional and engineering controls.
LF	Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.
LUST	Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.
MANIFEST	Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.
NPDES	The US National Pollutant Discharge Elimination System. The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the US are required to obtain a permit. The permit will likely contain limits on what can be discharges, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
PADS	PCB Activity Database. PADS identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

RCRA-SQG	Federal RCRA generators list: RCRA-SQG: RCRA - Small Quantity Generators: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous wastes defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.
RCRA-VSQG	Federal RCRA generators list: RCRA-VSQG: RCRA - Small Quantity Generators: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous wastes defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.
RCRA-TSDF	RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.
RESP PARTY	Open, inactive and closed responsible party sites
RGA LF	The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Protection in Florida.
RGA LUST	The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Protection in Florida.

RMP	When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g. the fire department) should an accident occur.
SEMS	SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.
SEMS-ARCHIVE	SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.
SITES LIST	This summary status report was developed from a number of lists including the Eckhardt list, the Moffitt list, the EPA Hazardous Waste Sites list, EPA's Emergency & Remedial Response information System list (RCRA Section 3012) & existing department lists such as the obsolete uncontrolled Hazardous Waste Sites list. This list is no longer updated.
SPILLS	Oil and Hazardous Materials Incidents Statewide oil and hazardous materials inland incidents
SPILLS80	Spills 80 includes those spill and release records available from FirstSearch databases prior to 1990. Typically, they may include chemical, oil and/or hazardous substance spills recorded before 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 80.
SPILLS90	Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.
SSTS	Section 7 Tracking Systems Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

TANKS	Storage Tank Facility List This listing includes storage tank facilities that do not have tank information. The tanks have either be closed or removed from the site, but the facilities were still registered at some point in history.
TIER 2	A listing of facilities which store or manufacture hazardous materials that submit a chemical inventory report.
TRIS	Toxic Chemical Release Inventory System. Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.
TSCA	Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.
UIC	Underground Injection Wells Database A listing of underground injection well locations. The UIC Program is responsible for regulating the construction, operation, permitting, and closure of injection wells that place fluids underground for storage or disposal.
UST	UST: Registered Underground Storage Tank List: Registered Underground Storage Tanks. UST's are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program.
VCP	Voluntary Cleanup Sites. Listing of closed and active voluntary cleanup sites.
WW	Wastewater Facility Regulation Database Domestic and industrial wastewater facilities.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D018
. Waste name: BENZENE

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System
 US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

4 NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

COMPLIANCE AND EMISSIONS REPORTING

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

AIR MAJOR

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

FINDS:

Registry ID: 110005276478

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System
 AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FINDS:

Registry ID: 110007431573

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
 US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

 Environmental Interest/Information System
 AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System

SSTS (Section Seven Tracking System) evolved from the FIFRA and TSCA Enforcement System (FATES). SSTS tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed each year.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

CAMDBS (Clean Air Markets Division Business System) is a national information system that supports the implementation of market-based air pollution control programs administered by the Clean Air Markets Division, within the Office of Air and Radiation. These programs include the Acid Rain Program, established by Title IV of the Clean Air Act Amendments of 1990, and regional programs designed reduce the transport of ozone. These emissions trading programs allows regulated facilities (primarily electric utilities) to adopt the most

cost-effective strategies to reduce emissions at their units. Units that reduce their emissions below the number of allowances they hold -- each allowance is equivalent to one ton of sulfur dioxide or nitrogen oxides -- may trade allowances with other units in their system, sell them to other utilities on the open market or through EPA auctions, or bank them to cover emissions in future years. CAMDBS functions include registering responsible officials, establishing allowance accounts, reporting hourly emissions data, and transferring allowances between accounts.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

CRITERIA AIR POLLUTANT MAJOR

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

US Emissions & Generation Resource Database (EGRID) contains data on emissions and resource mix for virtually every power plant and company that generates electricity in the United States.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ELECTRIC GENERATOR

AIR MAJOR

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

GREENHOUSE GAS REPORTER

US EPA RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "Best Available" air pollution technologies that have been required to reduce the emission of air

pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 300675.9

Waste code: D035
Waste name: METHYL ETHYL KETONE
Amount (Lbs): 141.3

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 28057.6

Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

TSCA SUBMITTER

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Classification: Small Quantity Generator

Hazardous Waste Summary:

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D008
. Waste name: LEAD

. Waste code: D009
. Waste name: MERCURY

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS
