Executive Summary

DRAFT

The Florida Turnpike Enterprise (FTE) is conducting a Project Development and Environment (PD&E) Study for the proposed Turnpike Extension (SR 821) Widening from US 1, south of Palm Drive, to Campbell Drive in Miami-Dade County, Florida. The study area is composed of both commercial and residential land use, with cropland/pastureland areas adjacent to the right-of-way (ROW).

This Contamination Screening Evaluation Report (CSER) identifies and evaluates known or potential contamination problems, presents recommendations concerning these problems, and discusses possible impacts to the proposed project, in accordance with Part 2, Chapter 22, of the Florida Department of Transportation (FDOT) PD&E Manual (FDOT, 2019).

Two (2) Build alternatives for the US-1/SR-5 interchange were developed as part of the PD&E alternative analysis evaluation process. Both alternatives included the Turnpike mainline widening to the median to accommodate six (6) lanes, US 1 interchange improvements, a proposed partial interchange at Lucy Street, auxiliary lanes and ramp connection improvements at the Campbell Drive interchange.

Both Build alternatives presented in this PD&E study would result in similar ROW impacts due to the interchange improvements. The table below illustrates each alternative's impacts due to the potentially contaminated sites, based on database research, document review, and site reconnaissance. An affect was determined if ROW would need to be acquired from the potentially contaminated site or if adjacent parcels could be deemed a risk during dewatering or soil excavation activities.

Table ES: Potentially Contaminated Sites per Alternative

Project Alternative	Contamination Risk			
	No	Low	Medium	High
A	2	12	1	1
B	2	12	1	1
No Build	0	0	0	0

A Level II Contamination Assessment is recommended for all sites with a High or Medium risk ranking to evaluate possible contaminant impacts to soil and groundwater in the project corridor.

Section 1

Introduction

DRAFT

1.1 Introduction

The purpose of this report is to present the findings of a Level I contamination screening evaluation for The Turnpike Extension (SR 821) Widening Project Development and Environment (PD&E) Study from US 1 (South of Palm Drive) to Campbell Drive. This report identifies and evaluates known or potential contamination sites within or adjacent to the project area that may affect implementation of the project. The report also presents recommendations for additional analysis and documents possible project impacts and their mitigations.

1.2 Project Description

The Turnpike Extension (SR 821) is a Strategic Intermodal System (SIS) limited access toll highway connecting the Florida Keys, the City of Florida City, and the City of Homestead with the greater Miami-Dade County region. The Turnpike Extension is the primary evacuation route connecting with the Florida Turnpike (SR 91) near the Miami-Dade/Broward County line.

This PD&E Study evaluates the southern three (3) miles of the Turnpike Extension within Miami-Dade County and the two local municipalities which are the City of Florida City and the City of Homestead. The PD&E study limits are from US 1 (south of Palm Drive) to Campbell Drive/SW 312nd Street. Turnpike milepost (MP) 0.00 is located at US 1 and MP 3.0 is located at the Campbell Drive interchange. (See **Figure 1-1**).

The proposed improvements include widening the existing four-lane expressway and bridges to six (6) lanes between US 1 and Campbell Drive; improving the US 1 interchange with a new ramp over Palm Drive, adding a partial interchange at Lucy Street, and converting the taper ramps to parallel ramps at the Campbell Drive interchange. Bridge widening, and/or minor improvements are proposed at Lucy Street, SW 162nd Avenue, C-103 Canal and Campbell Drive. Two new bridges

are proposed over the US 1 northbound lanes and over Palm Drive. This project does anticipate acquisition of new right of way along the east side US 1 south of Palm Drive and at the Lucy Street interchange.

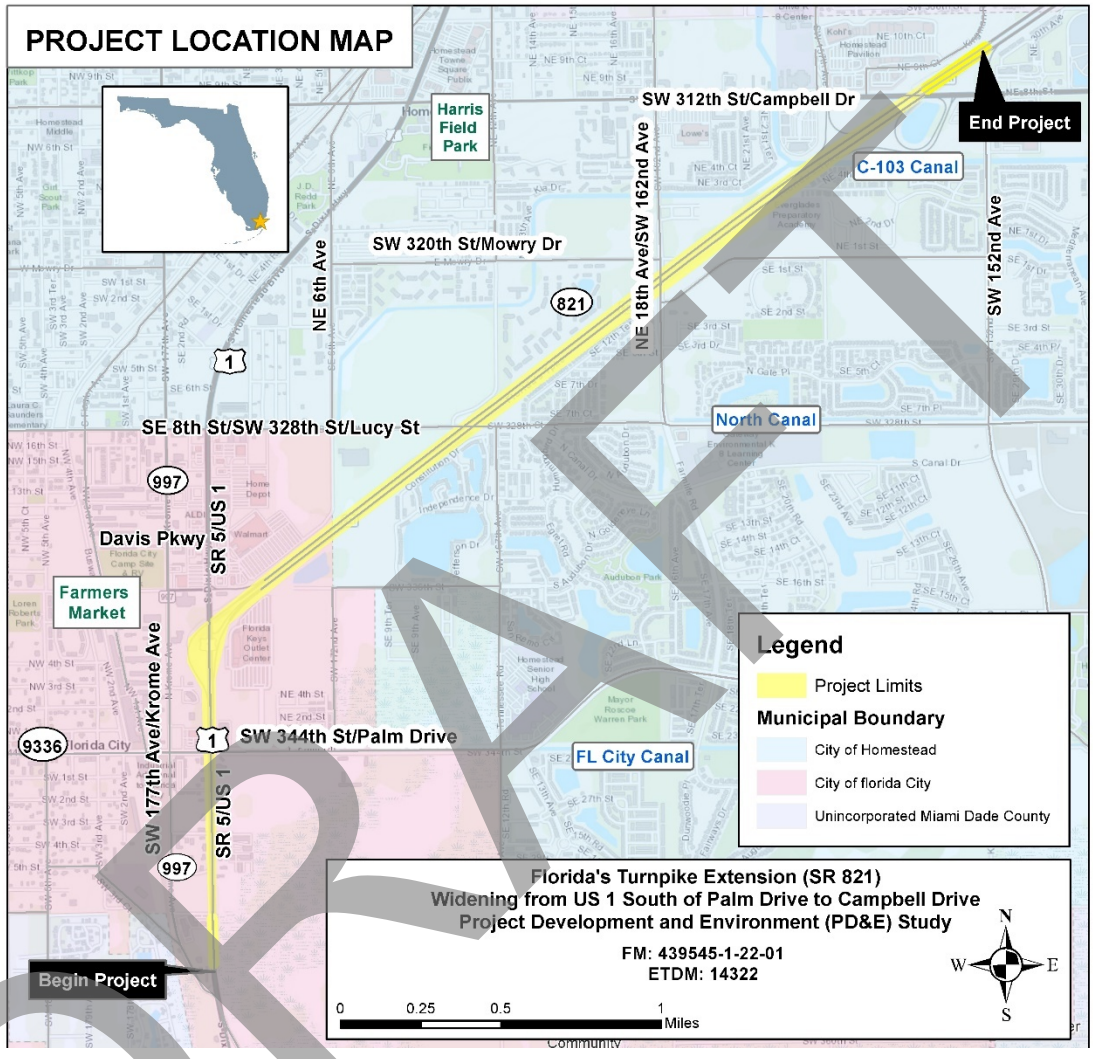

Figure 1-1 Project Location Map

1.3 Purpose and Need

The primary purpose of the project is to enhance traffic operations and safety. The secondary purpose of this project is to accommodate the existing and future traffic demand, enhance regional mobility and improve evacuation/emergency response.

DRAFT

Section 2

Project Alternatives

DRAFT

2.1 Alternatives Description

Throughout the document the two primary build alternatives will be referred to as Alternative A and Alternative B. Both alternatives accommodate the Turnpike mainline widening alternative, the Lucy Street interchange alternative and Campbell Drive ramp improvements. Concept plans for Alternative B, the recommended alternative, are provided in **Appendix A.**

- **Alternative A (US 1 Interchange Direct Connect):** Mainline widening alternative with a new tolled direct connect reliever ramp over Palm Drive. The existing on- and off-ramps at US 1 will remain available to local traffic with minor improvements.
- **Alternative B (US 1 Interchange Direct Connect Plus):** This alternative includes Alternative A improvements plus an extended single right turn lane to Palm Drive.

Section 3

Methodology

3.1 Sites Assessment and Evaluation

A preliminary (Level I) contamination screening evaluation of the FTE (SR 821) was conducted to identify potential contamination issues within the proposed project limits from properties or operations located within the vicinity of the project. This evaluation was performed under the guidance of Part 2, Chapter 20 Contamination, of the FDOT PD&E Manual (January 14, 2019) and consisted of the following tasks described below.

A federal database search for facility listings with Federal Superfund status including National Priorities List/Comprehensive Environmental Response, Compensation and Liability Information System (NPL/CERCLIS), was conducted within one half mile of the project. A screening distance of 1,000 feet was utilized to search for non-landfill solid waste sites. A screening distance of 500 feet was utilized to search registered facilities for petroleum, drycleaners, non-petroleum sites and to perform site reconnaissance. Other databases that were reviewed included the Florida Department of Environmental Protection Electronic Document Management System (OCULUS), the FDEP online Geographic Information System (GIS) maps, Florida Department of Environmental Protection (FDEP) Bureau of Petroleum Storage Systems Storage Tank/Contaminated Facility site and the EPA Facility Registry Service (FRS). The FDEP information portal was utilized to obtain site/facility specific information including site monitoring reports and status.

A site visit was performed for contamination potential within the project limits in Miami-Dade County. The project area was visited for site reconnaissance on May 12, 2018. No personal interviews were conducted during the field review. Photographs were taken at representative sites and are presented in **Appendix B.**

DRAFT

Historic aerials obtained from the University of Florida Digital Collections (https://ufdc.ufl.edu/) and Google Earth were utilized to determine past land uses that could contribute to potential contamination issues. The historic aerials used in this analysis are provided in **Appendix C**.

A record search of available environmental regulatory agency database information for the area was collected by Environmental Data Resources, Inc. (EDR), a firm that specializes in environmental records review. EDR provided a summary of findings of database searches. Per American Society for Testing and Materials (ASTM) standard 1527-13, the database search was conducted on federal, state, and tribal database records, which included lists of hazardous class information, stationary tanks, and known leaks and spills. This search, including a complete list of records searched, is included in **Appendix D**.

Physical maps, including historic topographic maps obtained from the United States Geological Survey (USGS), are included in **Appendix E**.

3.2 Contamination Rating System

The contamination rating system is divided into four degrees of risk: No, Low, Medium and High. The degrees and corresponding colors used in the Contamination Potential Map in **Section 6.0** are indicated as follows:

NO - (Blue Outline) - A review of available information on the property and a review of the conceptual or design plans indicates there is no potential contamination impact to the project. It is possible that contaminants have been handled on the property. However, findings from the Level I evaluation indicate that contamination impacts are not expected.

LOW - (Yellow) - A review of available information indicates that past or current activities on the property have an ongoing contamination issue; the site has a hazardous waste generator identification (ID) number, or the site stores, handles, or manufactures hazardous materials. However, based on the review of conceptual or design plans and/or findings from the Level I evaluation, it is not likely that there would be any contamination impacts to the project.

MEDIUM - (Orange) - After a review of conceptual or design plans and findings from a Level I evaluation, a potential contamination impact to the project has been identified. If there is insufficient information (such as regulatory records or site historical documents) to make a determination as to the potential for contamination impact, and there is reasonable suspicion that contamination may exist, the property should be rated at least as a "Medium". Properties used historically as gasoline stations and which have not been evaluated or assessed by regulatory agencies, sites with abandoned in place underground petroleum storage tanks or currently operating gasoline stations should receive this rating.

HIGH - (Red) - After a review of all available information and conceptual or design plans, there is appropriate analytical data that shows contamination will substantially impact construction activities, have implications to ROW acquisition or have other potential transfer of contamination related liability to the FDOT.

DRAFT

Section 4

Land Use

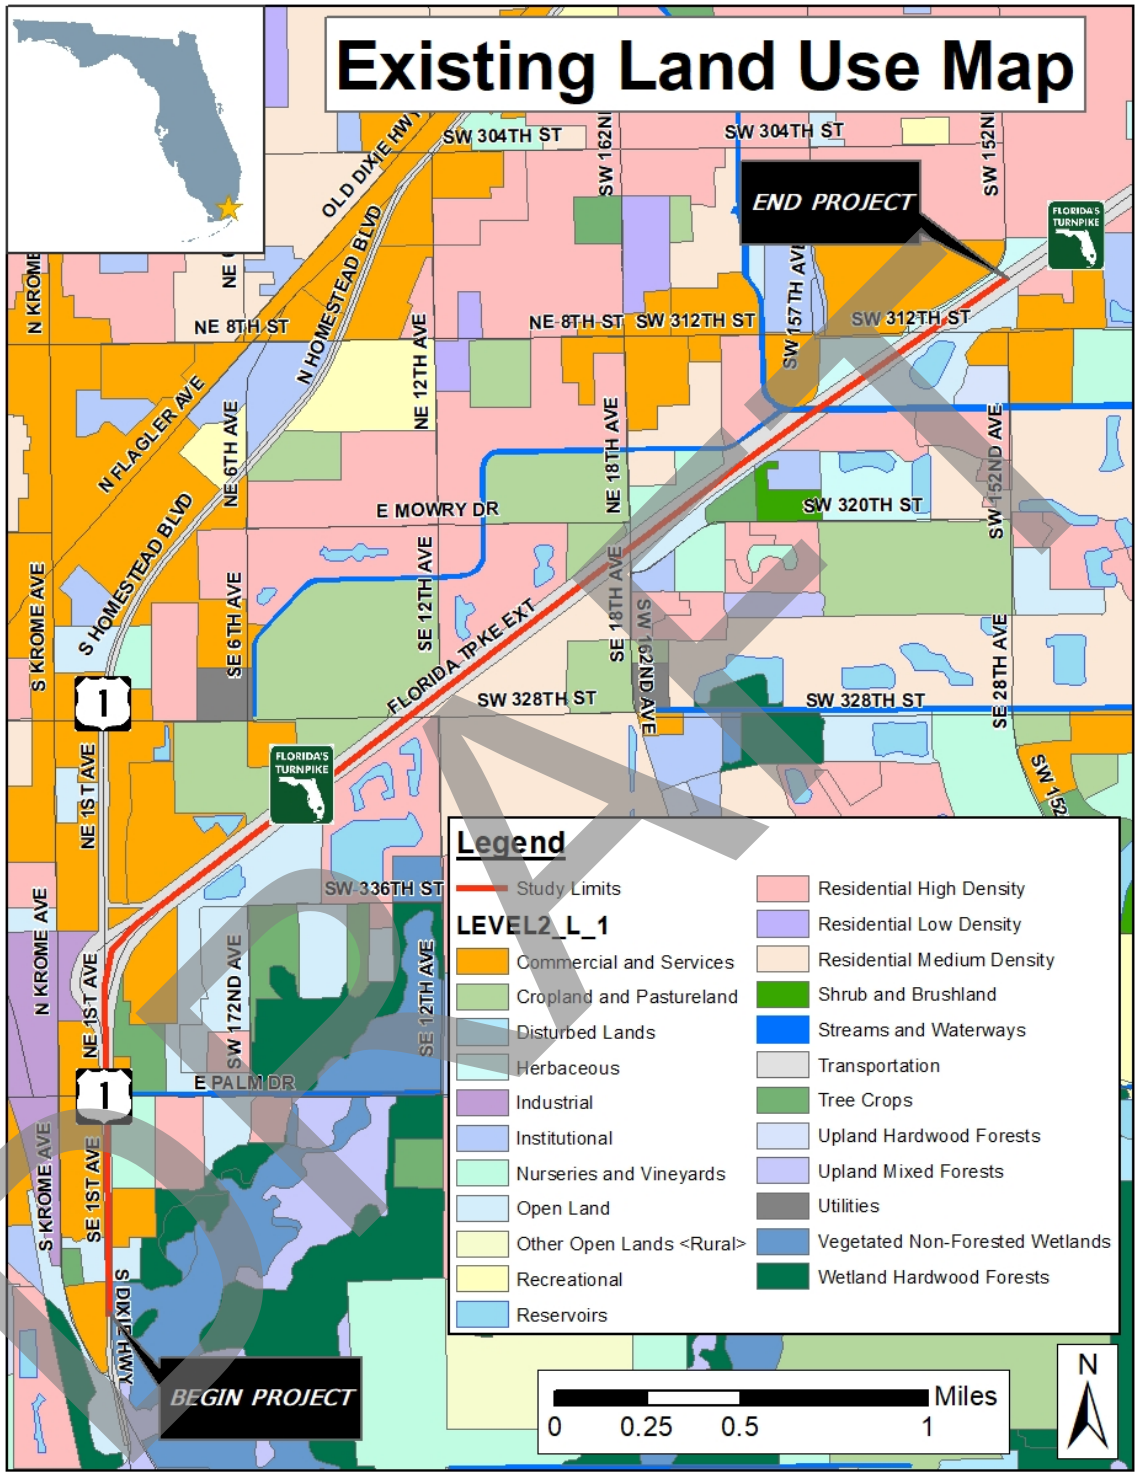

DRAFT

4.1 Existing Land Use

The existing land use for the study area (the project ROW and 500' buffer) and adjacent areas was determined through document review, the Efficient Transportation Decision Making (EDTM) Environmental Screening Tool, GIS shapefiles provided from Miami-Dade County, aerial photograph analysis, and observations made during the site visits.

At the beginning of project, at the south end of US 1 in Florida City, the adjacent land use along US 1 is a combination of commercial (retail/office), tree crops and wetlands. One (1) nursery is present on the eastside of US 1, south of Palm Drive. West of North Krome Avenue the land use becomes predominantly industrial due to the Farmer's Market. Traveling north along Florida's Turnpike, the land use beyond the right of way is predominately cropland/pastureland and residential. At the Campbell Drive interchange, the adjacent land use is predominantly commercial (retail/office) with some residential land use beyond. **Figure 4-1**, Existing Land Use Map, represents the land use classification in the study area.

(This space intentionally left blank)

Note: Land use information obtained from the Florida DEP website, based on 2012-2017 land use digital dataset information

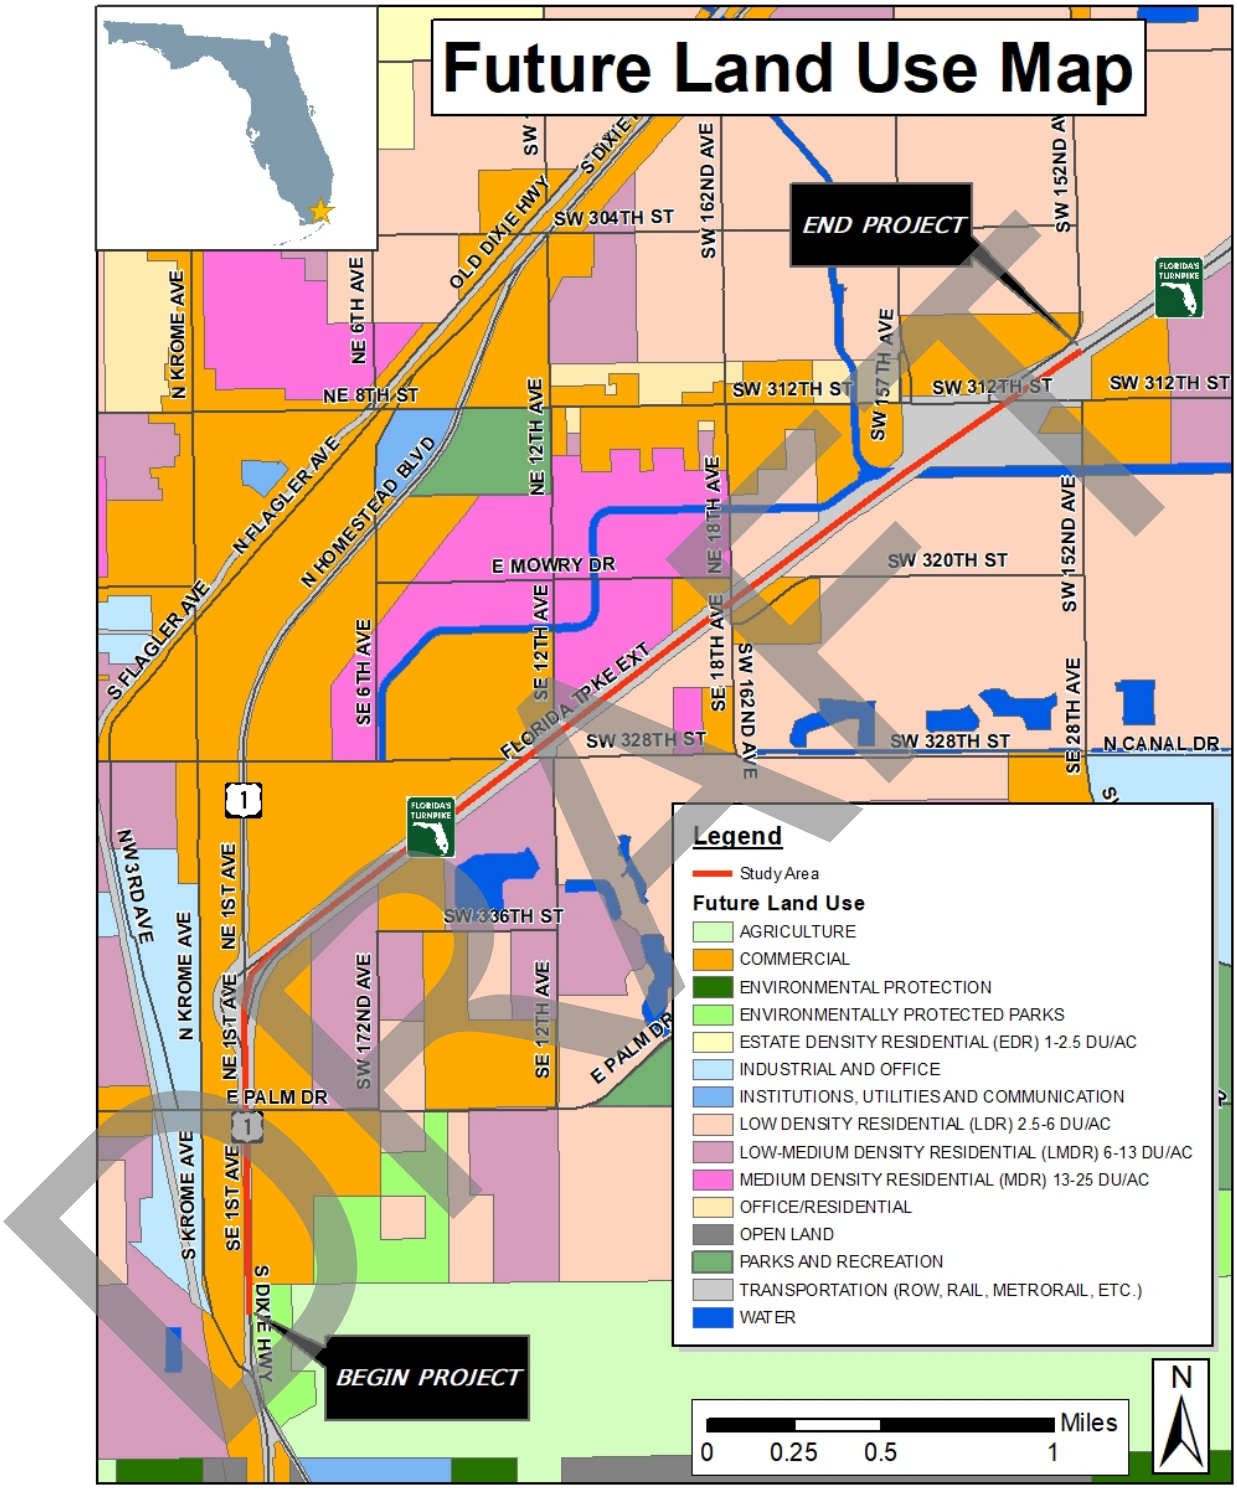

Figure 4-1 Existing Land Use Map

4.2 Future Land Use

The future land use for the study area (the project ROW and 500' buffer) and adjacent areas was determined from GIS shapefiles provided on the Miami-Dade County Open Date Hub website. At the southern end of the study area is predominately commercial (business and office) and residential zoning. Along the Turnpike the expected future land use is to remain predominantly commercial and residential, with no planned agriculture land use. At the north terminus of the study area, the land use consists of commercial (Business and Office) and residential zoning. **Figure 4-2** illustrates the future land use for the project area.

(This space intentionally left blank)

DRAFT

Note: Land use information obtained from www.miamidade.gov, updated October 2013

Figure 4-2 Future Land Use Map

4.3 Historic Aerials

To identify possible sources of contamination through time, historic flight aerials were reviewed. The aerial photographs were obtained by the University of Florida's Digital Collections and Google Earth as stated in **Section 3.1**. Only general historic land development was observed due to the low resolution and grey scale of the photos. Historical aerials are included in **Appendix C**.

The earliest historic aerials provided is titled Flight 2, dated 1938. The US 1 highway can be identified in the aerial along with some developed parcels that appear to be in the location of the current downtown City of Homestead. The surrounding area east of US 1 appears to be mostly vacant land or used for agriculture. The land north of SW 328th also appears mostly agricultural

The next set of aerial photos depicting the study area are titled Flight 7H and dated 1952. Sets of aerial photos for years 1948 and 1950 were found for Miami-Dade County but did not clearly show the study area. The 1952 aerials illustrate increasing residential, commercial, and industrial development around the City of Homestead and the City of Florida City.

The next set of aerials found depicting the study are titled Flight 1MM and dated 1970. These aerials were taken before completion of the Florida's Turnpike. There is a significant increase in urban development north and west of the project area.

The next set of historic aerials included is titled Flight 303, date 1984. The 1984 aerials show the loop southbound off-ramp at the US 1 interchange. Land adjacent to the Turnpike corridor is mostly vacant but increased development to the west of the study area is apparent.

Later historical photographs were obtained from Google Earth. The January 1994 and December 1999 photographs show the land use similar to the 1984 photograph. The November 2005 aerial photograph shows increasing residential areas east and west of US 1 near SW 328th Street and increasing commercial development west of US 1 south of Lucy. The December 2009 aerial shows increasing development east of US 1; commercial development on the south end and residential to the north. The December 2014 and December 2018 aerials show the land use similar to 2009.

DRAFT

Section 5

Hydrologic Features

Hydrologic features such as topography and hydrogeology were evaluated for preferential migration of contaminants. Hydrological features such as rivers, artesian wells, mines, and wellfields provided on historical government and geological maps were reviewed to identify any present features and if they would have the potential to impact the project.

5.1 Topography

Maps of topography depict historical, natural, and man-made features that can aid in determining past land use. The USGS "Homestead, FL" 1994 Quadrangle 7.5-Minute Map was reviewed as part of the contamination evaluation and can be found in **Appendix E**. Based on a review of the USGS Topographic Map, the project site is very flat and is located on an average elevation of five (5) feet above sea level (NGVD 1929).

5.2 Natural Features

The following sections summarize key natural features of the study area.

5.2.1 Soils

The United States Department of Agriculture Natural Resources Conservation Service (NRCS) Web Soil Survey tool was used to map soil types within the study area. Soil Surveys can provide information as to possible soil uses and potential environmental issues resulting from the land use. The Soils Map created in the NRCS Soil Survey tool may also be reviewed in **Appendix E.**

The presence of hydric soils in the study area is one of three components used to identify the jurisdiction of regulated wetlands protection area. The other two components are hydrologic indicators and hydrophytic vegetation. There were three hydric soils identified within the study area: Pennsuco Marl, Perrine Marl and Udorthents, marl substratum-Urban land complex.

DRAFT

5.2.2 Drainage Features

The drainage pattern generally flows west to east. The region is drained by the Florida City Canal, North Canal and C-103 Canals. These canals converge at the L-31E Canal before discharging to Biscayne Bay via spillway S-20F.

5.3 Hydrogeology

5.3.1 Hydrologic Features

The project area is generally underlain by the Biscayne aquifer, which is characterized by high porosity sands and limestone which typically allows rapid infiltration of rainfall and surface runoff. The groundwater surface generally follows the ground surface with a northwest to southeast gradient at a depth of approximately two feet below ground surface. Flow rates are estimated to be approximately 8,200 feet per day in the upper Biscayne aquifer. Existing surface drainage is flat, relying primarily on infiltration for removal.

Surface waters within the study area include wetlands, stormwater swales, streams and water ways, and small reservoirs. Detailed descriptions of surface waters can be found in the Natural Resources Evaluation (NRE) report prepared for this study. There are several wellfields identified near the study area: the Florida City wellfield, Harris Park wellfield and Newton wellfield. These wellfields are depicted in the Miami-Dade County Wellfield Protection Areas map in **Appendix E**.

5.3.2 Floodplains & Floodways

The project area is located within FEMA Flood Zones A, AE, AH, and Zone X. Zones A, AE, AH represent flood areas subject to flooding by the 1% annual chance flood. These zones account for the project area surrounding the Turnpike. Zone X is defined as an area subject to flooding by the 0.2% annual chance flood; or areas with less than one (1)-foot average depth; or drainage areas less than one (1) square mile. Zone X includes the Turnpike footprint.

Both the North Canal and the Florida City Canal are classified Zone AE with determined 1% annual flood elevation of five (5) feet NGVD29. The Mowry canal is classified Zone AE with determined 1% annual flood elevation of seven (7) feet NGVD29. These FEMA Maps are included in **Appendix E**.

DRAFT

Section 6

Project Impacts

DRAFT

6.1 Overall Findings

This evaluation identified 16 sites within the screening area that have the potential to impact the Project. All sites were evaluated separately and adjacent activities and conditions, such as surface water and groundwater flows, were considered for each location. Historic aerial photos also identified the changes in land use over time which may identify sources of potential contamination.

Risk ratings were assigned to parcels based on historical uses, contamination type and history and proximity to the proposed improvements. Various adjacent agricultural areas, assumed to have been subject to pesticide application, were deemed as No Risk. The potential contamination concerns were identified through several different methodologies as discussed in **Section 3.1**, and risk rankings were based on the contamination rating system described in **Section 3.2**. The Medium and High Risk sites should be further evaluated during subsequent phases to determine if contaminants may be disturbed during project activities. Available supporting documentation from regulatory research is included in **Appendix F**. **Table 6-1** summarizes the potential contamination sites and the preliminary risk rating. One (1) High Risk, one (1) Medium Risk and twelve (12) Low Risk potentially contaminated sites were identified. Two (2) sites evaluated were determined to be No Risk. The 16 sites identified within the screening area that were determined to have the potential to impact the Project are shown on **Figure 6-1** with the risk rating color-coded as noted in the legend.

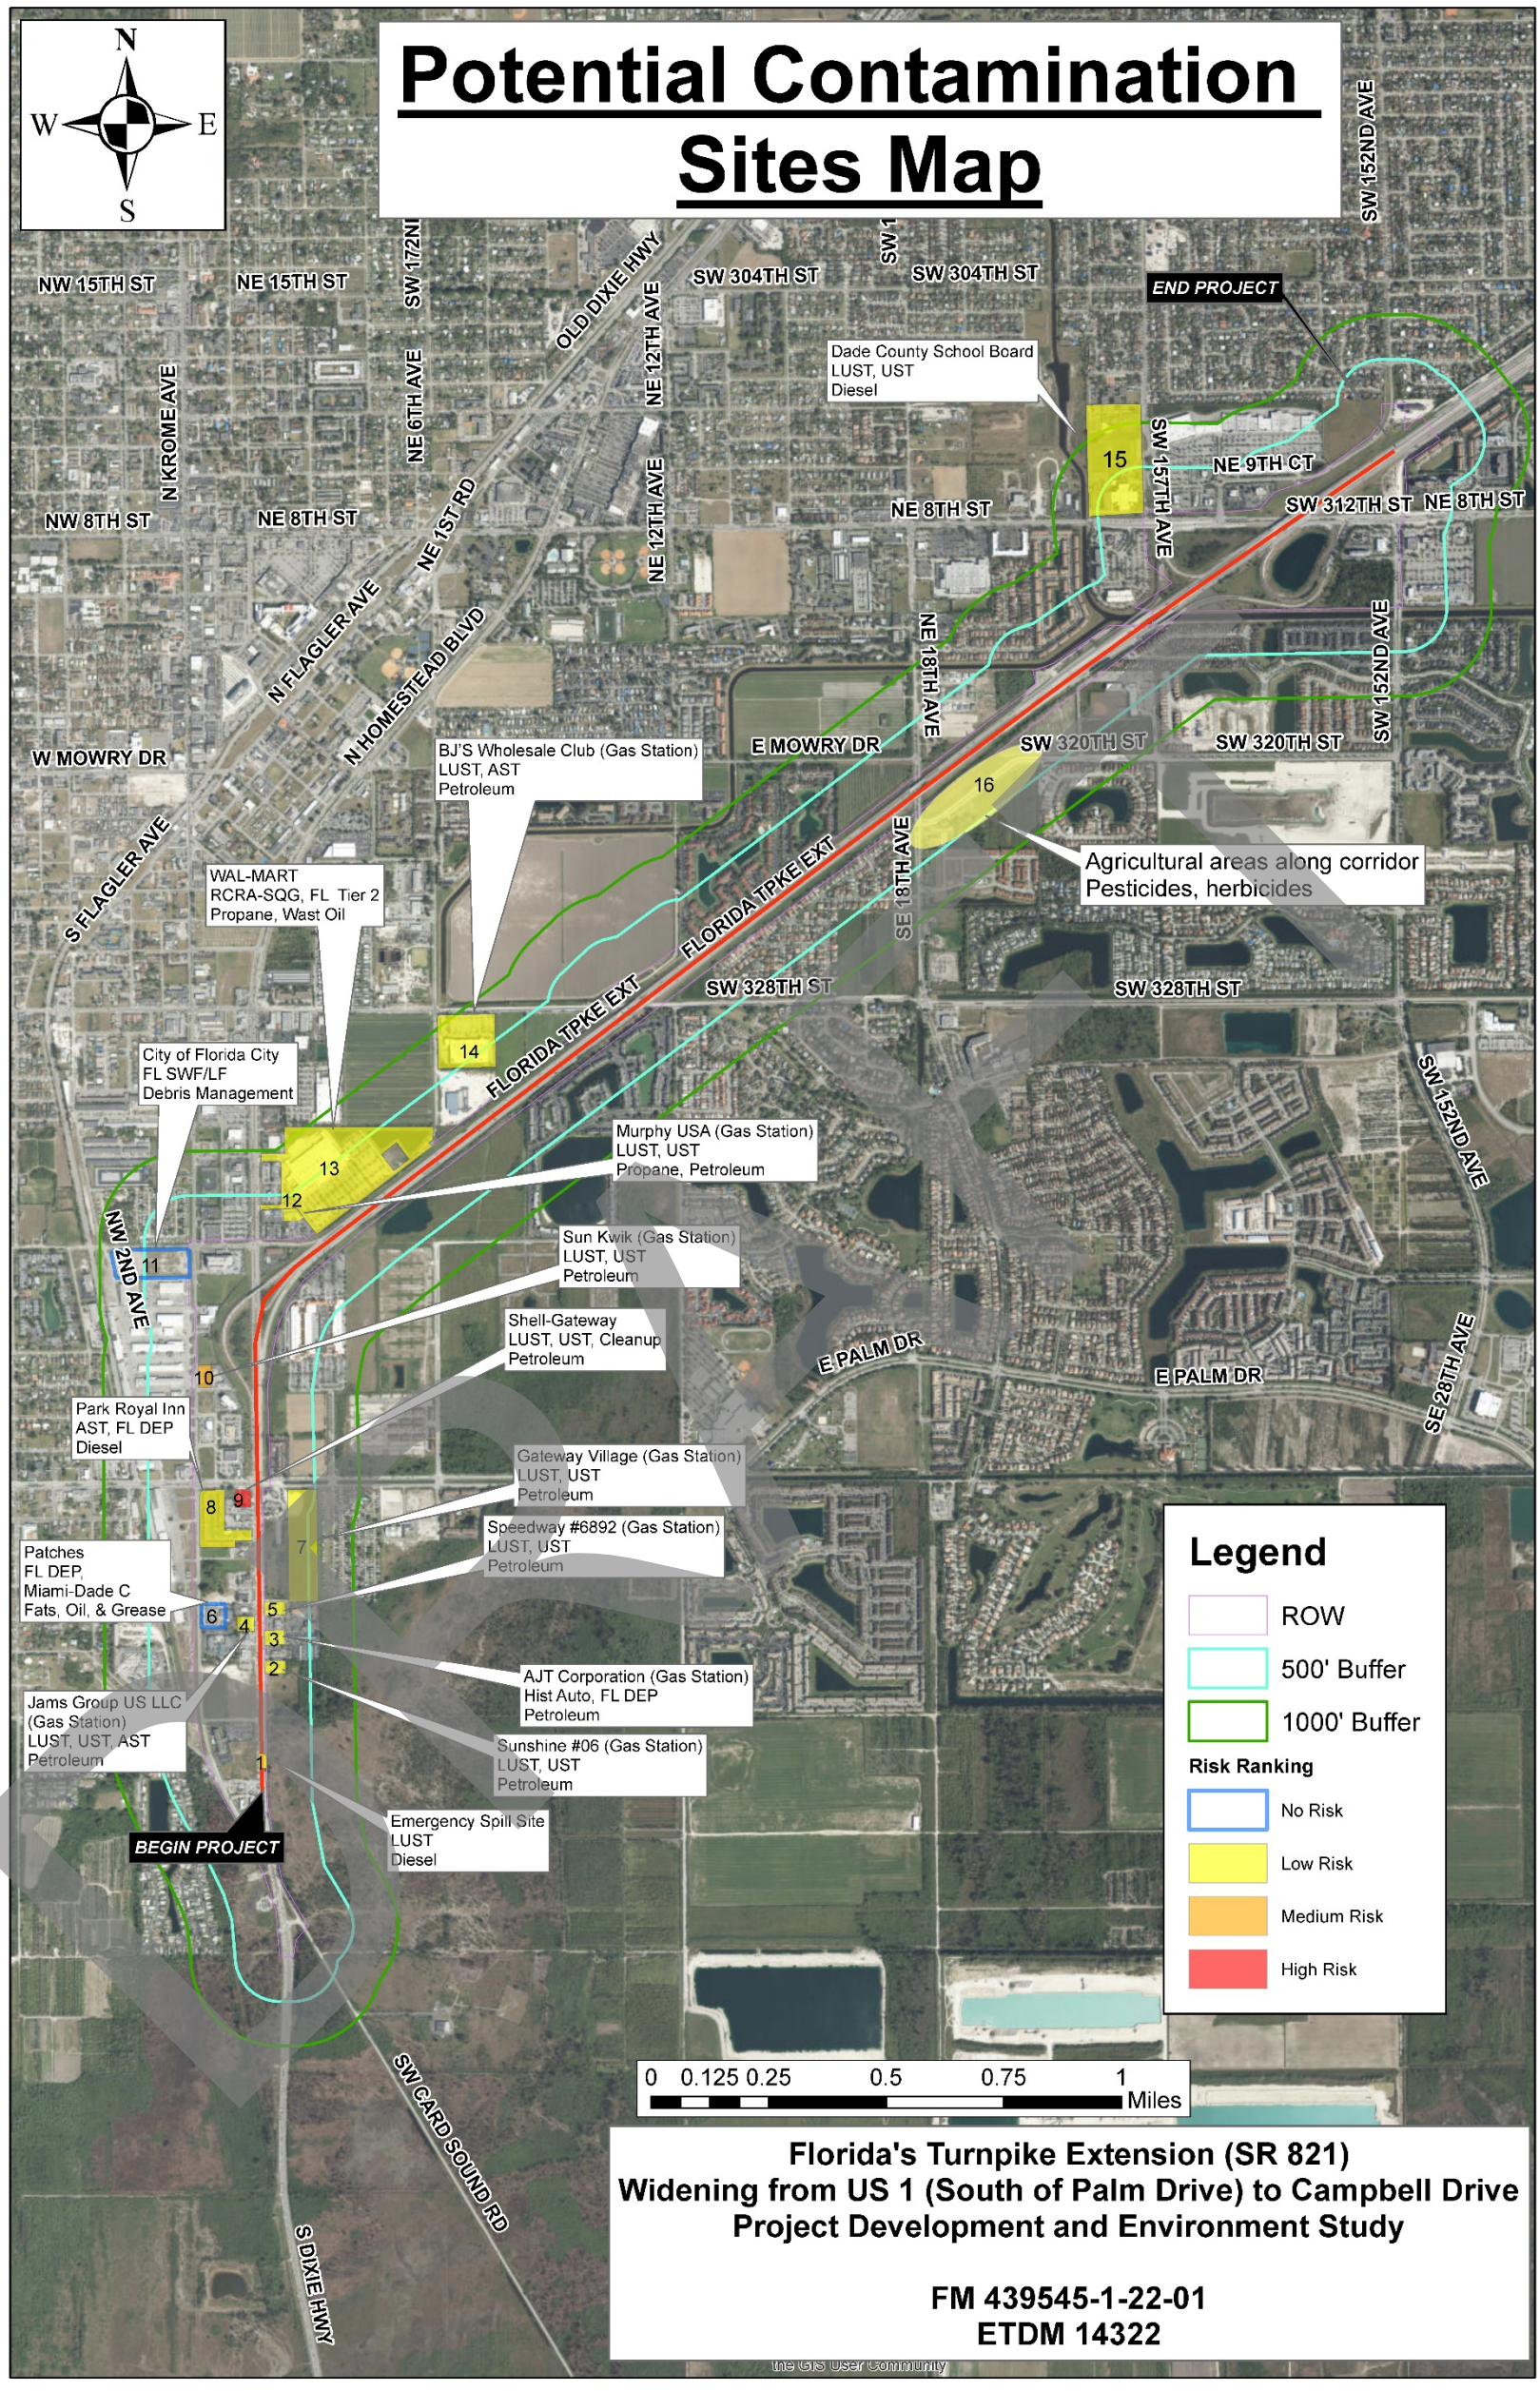

Figure 6-1 Potential Contamination Sites Map (per EDR 2018)

Table 6-1 Contaminated Sites Ranking

Map ID	Site Name	Site address	Risk/Database(s)	Risk Rating
1	Emergency Spill site-Triple A Linen Inc.	S Dixie HWY @ SW 350th Street Homestead, FL 33035	LUST	Low

DRAFT

Each of the two (2) alternatives presented in this PD&E study would result in similar Right of Way (ROW) impacts due to the interchange improvements at US 1 and proposed partial interchange at Lucy Street. The mainline widening does not require an additional ROW. **Table 6-2** below illustrates how each alternative's alignment would affect the potentially contaminated sites. An affect was determined if ROW would need to be acquired from a potentially contaminated site or if dewatering activities could disturb possible soil or ground water contamination.

Table 6-2 Potentially Contaminated Sites per Alternative

Project Alternative	Contamination Risk			
	No	Low	Medium	High
A	2	12	1	1
B	2	12	1	1
No Build	0	0	0	0

6.2 High, Medium and Low Risk Sites

The following sites were ranked as High Risk, Medium Risk, Low Risk, or No Risk.

6.2.1 High Risk Ranked Sites

Per the analysis one (1) site was assigned a ranking of High Risk.

Map Site #9 Shell-Gateway (FDEP # 8506213)

The site located at map site #9 is located at the southwest corner of US 1 and Palm Drive. The FDEP lists the site as open, has had five (5) reported discharges and is currently undergoing cleanup. Furthermore, according to the FDEP Storage Tank Database, the underground storage tank (UST) system consists of three (3) 12,000-gallon fiberglass double-walled USTs used to store various grades of unleaded gasoline and one (1) 10,000-gallon fiberglass double walled UST used to store vehicular diesel. A *Site Summary Package* was submitted to the Department of Environmental Resources Management (DERM) in September 2019 that discusses plans for installation of a remediation system (air sparging/vapor extraction) to remove soil and groundwater contamination at the site. Figures in the *Site Summary Package* suggest groundwater flow is radial from the dispenser island towards East Palm drive and SE 1st Avenue. Excerpts from the *Site Summary Package* are included in **Appendix F**. The *Site Summary Package* identifies petroleum contaminants in groundwater including benzene, xylene, 1-methylnaphthalene, 2-methylnaphthalene, and methyl tert-butyl ether (MTBE). Petroleum contamination in both soil and groundwater could be encountered near this site.

6.2.2 Medium Risk Ranked Sites

Per the analysis one (1) site was assigned a ranking of Medium Risk.

DRAFT

Map Site #10 Sun Kwik #1-Just Oil (FDEP# 8622180)
The site located at map site #10 is located on the east side of Krome Avenue just west of the Turnpike off-ramp at the US 1 interchange. The site is a closed gas station with the following removed tanks: two (2) 4,000-gallon USTs and two (2) 2,000-gallon USTs of unleaded gasoline, one (1) 4,000-gallon, one (1) 2,000-gallon and two (2) 6,000-gallon USTs of vehicular diesel. During the site reconnaissance the site was vacant and monitoring wells were detected. A petroleum discharge was reported in December of 1991 and remedial action is ongoing. Excerpts from the *Remedial Action Plan Modification (LSRAPM) Addendum* are included in **Appendix F**. The *LSRAPM* identifies petroleum contaminants in groundwater including benzene and MTBE. Petroleum contamination in both soil and groundwater could be encountered near this site.

6.2.3 Low Risk Ranked Sites

Per the analysis twelve (12) sites were assigned a ranking of Low Risk.

Map Site #1 Emergency Spill Site – Triple A Linen Inc.
The site located at map site #1 is not a parcel but an area identified on the map that best represents the location of a diesel spill. The spill occurred on October 29, 2004 and was monitored by FDEP. More information regarding this incident can be found in **Appendix F**.

Map Site #2 Sunshine #06 (FDEP # 9701266)
The site located at map site #2 is adjacent to US 1, on the east, and approximately 2,000 feet south of Palm Drive. The site is an active gas station with two (2) 12,000-gallon USTs of unleaded gasoline. According to the FDEP database, a Site Rehabilitation Completion Order was issued on December 21, 2019. Most recently, Miami-Dade County Environmental Resources Management issued a letter of return to compliance on January 21, 2020.

Map Site #3 ATJ Corporation (FDEP# 9601173)
The site located at map site #3 is adjacent to US 1, on the east, and approximately 1,650 feet south of Palm Drive. The site is an active gas station with one (1) 8,000-gallon UST of vehicular diesel, and two (2) 12,000-gallon USTs of unleaded gasoline. According to the FDEP database, a Site Rehabilitation Completion Order was issued on January 22, 2018. Most recently, Miami-Dade County Environmental Resources Management issued a letter of return to compliance on September 12, 2019.

Map Site #4 Jams Group US LLC (FDEP# 9100201)
The site located at map site #4 is adjacent to US 1, on the west, and approximately 1,500 feet south of Palm Drive. The site is an active gas station with one (1) 8,000-gallon UST of vehicular diesel, two (2) 12,000-gallon USTs of unleaded gasoline and one (1) 2,000-gallon tank of unleaded gas. According to the FDEP database, a Site Rehabilitation Completion Order was issued on December 11, 2015. Most recently, Miami-Dade County Environmental Resources Management issued a letter of return to compliance on March 28, 2019.

Map Site #5 Speedway #6892 (FDEP# 9046210)
The site located at map site #5 is adjacent to US 1, on the east, and approximately 1,300 feet south of Palm Drive. The site is an active gas station with one (1) 20,000-gallon UST of vehicular diesel, and one (1) 20,000-gallon UST of unleaded gasoline. According to the FDEP database, a Site Rehabilitation Completion Order was issued on May 18, 2011. Most recently, FDEP issued a letter of compliance on March 12, 2019 in a Storage Tank Facility Compliance Assistance Site Inspection Report.

DRAFT

Map Site #7 Gateway Village (FDEP# 8628847)

The site located at map site #7 is located approximately 250 feet east of US 1 and adjacent south of Palm Drive. The Florida OCULUS database system has a note suggesting that there was confusion on which documents were associated with this property. It is possible that the recorded site is misfiled under the wrong location and should correspond to the Shell-Gateway gas station located at 10 SE 1st Avenue Homestead, FL 33034. The file includes two hand-written notes, one from 1998 stating that there were no tanks at that time, and one that the tanks were removed in May 1995. The limited information is included in **Appendix F**.

Map Site #8 Royal Park Inn

The site located at map site #8 is adjacent to US 1, on the west side, and is approximately 500 feet south of Palm Drive. The most recent data available for this site on FDEP's database is dated back to December 18, 1987. The EDR Report identifies this site as facility ID 8736709 with one 1 (1) in service 280-gallon AST of vehicular diesel and one 1 (1) in service 550-gallon AST of vehicular diesel. No reports of releases from the AST were found during the database searches.

Map Site #12 Murphy USA #5738 (FDEP# 9802395)

The site located at map site #12 is located on the east side of US 1 approximately 250 feet north of the Davis Parkway off-ramp. The site is an active gas station with two (2) 12,000-gallon USTs of unleaded gasoline. A petroleum discharge was reported in September of 2010. According to the FDEP database, a Site Rehabilitation Completion Order was issued on October 2, 2013. Most recently, Miami-Dade County Environmental Resources Management issued a letter of return to compliance on February 6, 2020.

Map Site #13 WAL-MART Supercenter #2727 (FDEP# 8736709)

The site located at map site #13 is located on the east side of US 1 approximately 250 feet north of the Davis Parkway off-ramp. The FDEP reported that the site was in compliance on October 25, 2016.

Map Site #14 BJ'S Wholesale Club, Inc. DBA BJ'S Wholesale Club (Yates Homestead LLC) (FDEP# 9807174)

The site located at map site #14 is located approximately 400 feet west of the Turnpike Extension south of Lucy Street. The site is an active gas station with one (1) 20,000-gallon UST of unleaded gasoline, one (1) 12,000-gallon UST of unleaded gasoline, one (1) 8,000-gallon UST of unleaded gasoline and one (1) 1,000-gallon aboveground storage tank (AST) of emergency generator diesel. According to the FDEP database, a Site Rehabilitation Completion Order was issued on August 1, 2013. Most recently, Miami-Dade County Environmental Resources Management issued a letter of return to compliance on November 06, 2019.

Map Site #15 Dade County School BD - Campbell Drive

The site located at map site #15 is located on the northwest corner of Campbell Drive and SW 157th Avenue. The most recent data available for this site on FDEP's database is dated back to March 2, 1999 and can be found in **Appendix F**. The EDR Report identifies this site as facility ID 9047404 with a removed 1,000-gallon UST of emergency generator diesel with no cleanup required. No other information could be found on this site.

DRAFT

Map Site #16 Agricultural Land

Map site #16 is intended to represent all agricultural land in the Study Area. Pesticides and herbicides were likely used for the maintenance of row crop, tree crops, and pastureland, and contamination from these applications may persist. No reports of agricultural chemical releases were found during the records researched; therefore, the agricultural areas were classified as low risk.

6.2.4 No Risk Ranked Sites

Per the analysis two (2) sites were assigned a ranking of No Risk.

Map Site #6 Patches

The site located at map site #6 is located on the southeast corner of Krome Avenue and SE 3rd Terrace in Florida City. The site appears to office/retail/commercial space. The EDR report lists this site as a grease trap facility. The facility is now closed, and no permit violations were identified.

Map Site #11 City of Florida City

The site located at map site #11 is located on the southwest corner of Krome Avenue and Davis Parkway and is recorded as a disaster debris management site. The site appears to be an empty field with grass vegetation.

6.3 Asbestos Containing Materials

There are several existing bridge structures within the project limits. In accordance with the National Emission Standards for Hazardous Air Pollutants regulations, asbestos inspection reports were requested for bridges and structures. Reports titled *Asbestos Survey, Lead-Based Paint Survey, Limited Toxicity Characteristic Leaching Procedure (TCLP) Sampling, and Paint Screening Survey Report* were completed by GLE Associates, Inc. (GLE) at the following locations:

Bridge	Location	Date
Bridge No. 870178 (MP 2.8)	Southbound State Road 821 (SR-821) Florida Turnpike over Mowry Canal 103	April 2018
Bridge No. 870179 (MP 3.1)	Southbound State Road 821 (SR-821) Florida Turnpike over Campbell Drive	April 2018
Bridge No. 870180 (MP 4.82)	Southbound HEFT (SR-821) over Canal C103-N	November 2018
Bridge No. 870191 (MP 0.3)	Southbound State Road 821 (SR-821) Florida Turnpike Off Ramp over US Route 1	May 2018
Bridge No. 870192 (MP 1.5)	Southbound State Road 821 (SR-821) Florida Turnpike over 328th Street	April 2018
Bridge No. 870193 (MP 2.1)	Southbound State Road 821 (SR-821) Florida Turnpike over SW 167th Avenue	April 2018
Bridge No. 870389 (MP 2.8)	Northbound State Road 821 (SR-821) Florida Turnpike over Mowry Canal 103	April 2018
Bridge No. 870390 (MP 3.1)	Northbound State Road 821 (SR-821) Florida Turnpike over Campbell Drive	April 2018

DRAFT

Bridge	Location	Date
Bridge No. 870391 (MP 4.76)	Northbound HEFT (SR-821) over Canal Mowry 103	November 2018
Bridge No. 870399 (MP 1.5)	Northbound State Road 821 (SR-821) Florida Turnpike over 328th Street	April 2018
Bridge No. 870400 (MP 2.1)	Northbound State Road 821 (SR-821) Florida Turnpike over SW 167th Avenue	April 2018

Asbestos reports were available for all existing structures. A review of the reports identified that asbestos containing material was not detected in any of the samples collected from the bridges. Prior to destructive activities on any bridge, the reports should be reviewed to confirm that they cover areas of the proposed work.

6.4 Lead Based Paint

Lead-based paint was used on steel bridges, towers, storage tanks, buildings, and other facilities through the 1980s, and in some cases into the 1990s. Lead-based paint may have to be removed during facility maintenance or when buildings or structures are being demolished, restored or renovated. Lead is a serious health hazard if it is inhaled or ingested. Scraping or sanding lead-based paint creates paint particles that are a hazardous waste and can be a health hazard if proper safety precautions are not taken (USDA, 2007).

Reports reviewed for all existing bridges only found detectable lead levels for Bridge 870191. The report identified small traces of lead for the structure but are not equal to or above the United States Department of Housing and Urban Development levels. Further investigation in the likelihood of encountering lead-based paint during any proposed demolition, construction, or reconstruction of bridge structure should be conducted during the design phase.

DRAFT

Section 7

Conclusions

DRAFT

7.1 Conclusions

The CSER is performed in an effort to identify known or potential contamination sites based on reasonably ascertainable documentation and available information. However, environmental conditions may still exist under or adjacent to the project alignment that were not identifiable through this scope of services. The results of this CSER are not, and cannot, be interpreted as a representation or guarantee that there are no environmental concerns existing on, beneath, or around the alignment. The extent of potential contamination at the sites identified in this report and other discovered after the study has been completed should be evaluated during the final design phase to determine change in conditions since this report was prepared.

Based on database research, document review, and site reconnaissance, one (1) site along the project corridor has a High Risk ranking, one (1) site has a Medium Risk ranking, and twelve (12) sites have a Low Risk ranking for potential contamination.

A Level II Contamination Assessment is recommended for any areas that have proposed dewatering or subsurface work activities (e.g. pole foundations, drainage features) occurring adjacent to or at any of these sites. If any dewatering activities are identified in design, particularly on US 1 south of Palm Drive where existing French drains are present, the appropriate permitting and local agency coordination activities should take place. A Level II Contamination Assessment is recommended for all Medium and High ranked sites.

Based on the age of the bridge, lead-based coating shall be assumed to be present within faying surfaces of splices and top flanges embedded in concrete decks as well as other surfaces. Asbestos and lead-based paint was not identified in the samples collected from bridges listed in **Section 6.2**; however; prior to destructive activities on any bridge, the reports should be reviewed to confirm that they cover areas of the proposed work.

The FDOT Standard Specifications for Road and Bridge Construction July 2012 Workbook, Section 120-Excavation and Embankment, Sub article 120-1.2-Unidentified Areas of Contamination, should be provided with the construction contract documents. This specification details what the contractor should do if unexpected contamination is encountered.

EXECUTIVE SUMMARY

FEDERAL RECORDS

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 9 RCRA-SQG sites within the searched area.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 7 RCRA-CESQG sites within the searched area.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there are 7 RCRA NonGen / NLR sites within the searched area.

Database: FTTS INSP, Date of Government Version: 04/09/2009			

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, has revealed that there are 2 HIST FTTS sites within the searched area.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, has revealed that there are 2 US AIRS sites within the searched area.

FL UST: The Underground Storage Tank database contains registered USTs. Shortly after the September 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the FL UST list, as provided by EDR, has revealed that there are 57 FL UST sites within the searched area.

FL AST: Shortly after the Sept 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the FL AST list, as provided by EDR, has revealed that there are 25 FL AST sites within the searched area.

EXECUTIVE SUMMARY

EDR PROPRIETARY RECORDS

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 26 EDR Hist Auto sites within the searched area.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 5 EDR Hist

FINDS:

Registry ID: 110067048643

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110064306790

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

HOMESTEAD, FL 33033

FINDS:

Registry ID: 110070113721

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FINDS:

Registry ID: 110032832709

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Registry ID: 110056121370

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

FINDS:

Registry ID: 110007455351

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and

Environmental Interest/Information System
COMMUNITY WATER SYSTEM

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HOMESTEAD, CITY OF (Continued) **1000440416**

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FINDS:

Registry ID: 110024400076

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110056400684

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

33001 S DIXIE HWY **ECHO** **N/A**
FLORIDA CITY, FL 33034

FINDS:

Registry ID: 110018874690

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

UNKNOWN **ECHO** **N/A**
FLORIDA CITY, FL 33034

FINDS:

Registry ID: 110043725056

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HOMESTEAD, FL 33030

FINDS:

Registry ID: 110028302003

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

SSTS (Section Seven Tracking System) evolved from the FIFRA and TSCA Enforcement System (FATES). SSTS tracks the registration of all pesticide-producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and related devices that are produced, sold, or distributed each year.

FLORIDA CITY, FL 33034

FINDS:

Registry ID: 110032833165

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Comments:	6/14/2007: SPOKE WITH GONZALEZ TO INQUIRE ABOUT SOME MATERIAL HANDLING EQUIPMENT (MHE) THAT MIGHT HAD SOME BATTERIES. MR. GONZALEZ STATED THAT HE DOES HAVE FORKLIFTS THAT ARE RAN BY THE PROPANE THAT HE REPORTED ON THE TIER TWOS. ALSO, THE BATTERIES ARE SMALL LIKE CAR BATTERIES. THE PHOTO THAT WAS TAKEN FROM THE INTERNET WAS QUESTION, AND HE INDICATED THAT FACILITY WAS NOT LOCATED IN FLORIDA, PROBABLY THE REPACKAGING PLANT. MCK.

FINDS:

Registry ID: 110007437639

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110035527515

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Registry ID: 110044884480

FLORIDA CITY, FL 33034

FINDS:

Registry ID: 110031267867

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110005597924

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

DRAFT

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/11/2017
Date Data Arrived at EDR: 12/22/2017
Date Made Active in Reports: 01/05/2018
Number of Days to Update: 14

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017
Date Data Arrived at EDR: 12/22/2017
Date Made Active in Reports: 01/05/2018

Data Release Frequency: Quarterly

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

DRAFT

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

Next Scheduled EDR Contact: 11/28/2011
Data Release Frequency: No Update Planned

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 01/09/2018
Date Data Arrived at EDR: 02/06/2018

Last EDR Contact: 04/27/2018
Next Scheduled EDR Contact: 07/30/2018
Data Release Frequency: Quarterly

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

DRAFT

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/11/2017
Date Data Arrived at EDR: 12/26/2017

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans.
It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

EDR PROPRIETARY RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Liquid Waste Transporter List

The Liquid Waste Transporter permit regulates the transportation of various types of liquid and solid waste, including hazardous waste, waste oil and oily waste waters, septic and grease trap waste, biomedical waste, spent radiator fluid, photo chemical waste, dry sewage sludge, and other types of non-hazardous industrial waste. The Liquid Waste Transporter permits needed to protect the environment and the public from improperly handled and transported waste.

Marine Facilities Operating Permit

What is this permit used for? Miami-Dade County Ordinance 89-104 and Section 24-18 of the Code of Miami-Dade County require the following types of marine facilities to obtain annual operating permits from DERM: All recreational boat docking facilities with ten (10) or more boat slips, moorings, davit spaces, and vessel tie-up spaces. All boat storage facilities contiguous to tidal waters in Miami-Dade County with ten (10) or more dry storage spaces including boatyards and boat manufacturing facilities.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services

Miami-Dade County

Wellfield Protection Areas

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' National Geodetic Vertical Datum of 1929 (NGVD 29). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations tables in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations tables should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Florida State Plane east zone (FIPSZONE 0901). The **horizontal datum** was NAD 83, GRS80 spheroid. Differences in datum, spheroid, projection or State Plane zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the National Geodetic Vertical Datum of 1929. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713-3242**, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was provided in digital format by the Miami-Dade County Information Technology Department. These data were compiled at a scale of 1:3,600 from digital orthophotography dated 2001. Additional base map information was provided by the Cities of Aventura, Coral Gables, and Homestead, the Town of Cutler Bay, and Miami-Dade County.

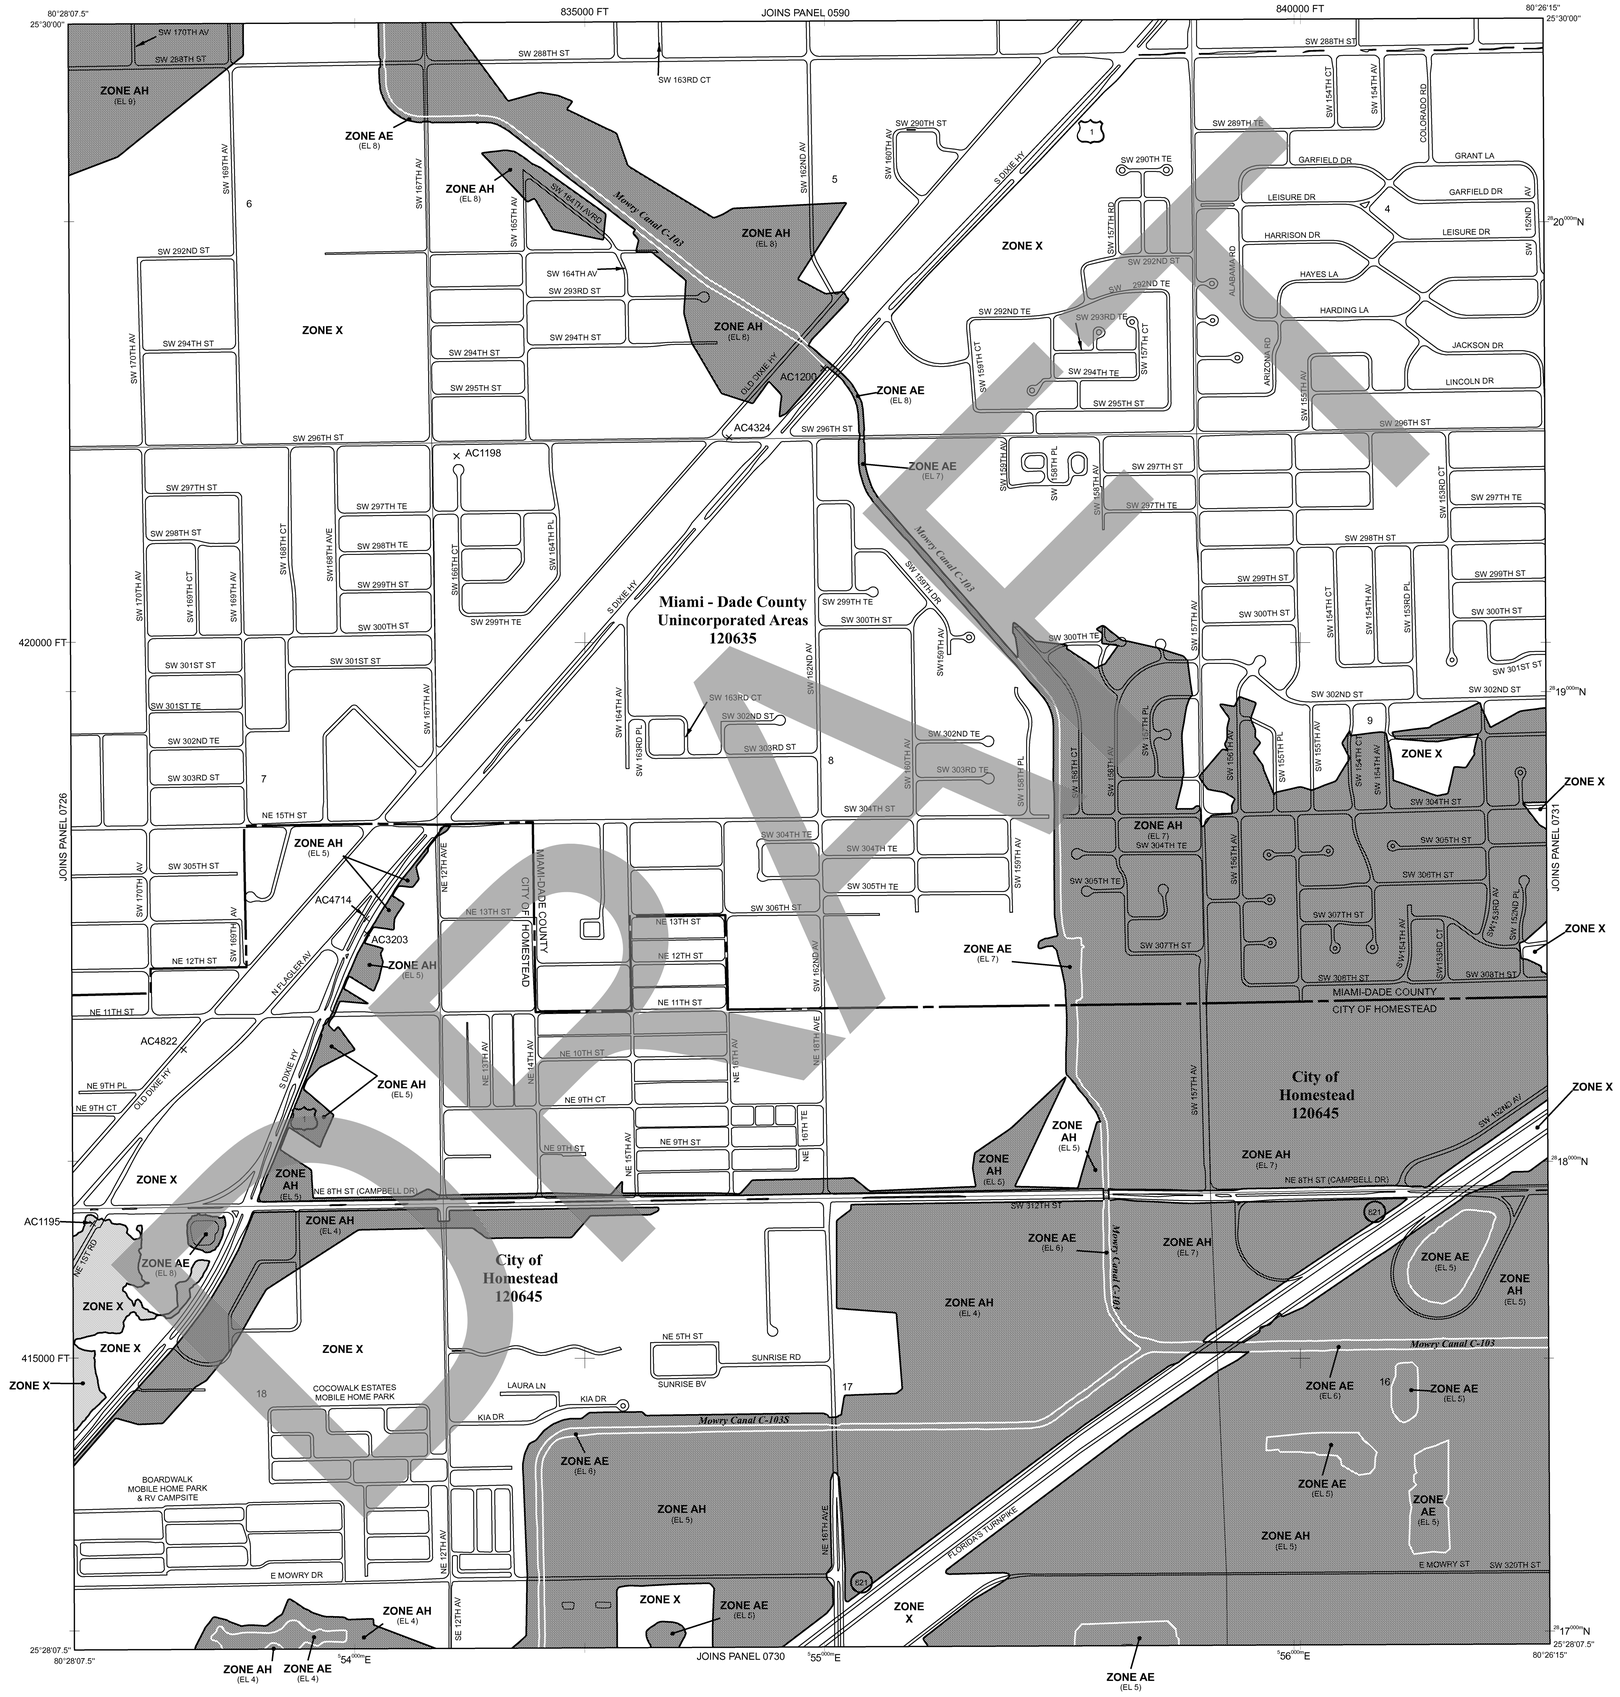

This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to confirm to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact the **FEMA Map Service Center** at 1-800-358-9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its website at http://msc.fema.gov.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov.

Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713-3242**, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was provided in digital format by the Miami-Dade County Information Technology Department. These data were compiled at a scale of 1:3,600 from digital orthophotography dated 2001. Additional base map information was provided by the Cities of Aventura, Coral Gables, and Homestead, the Town of Cutler Bay, and Miami-Dade County.

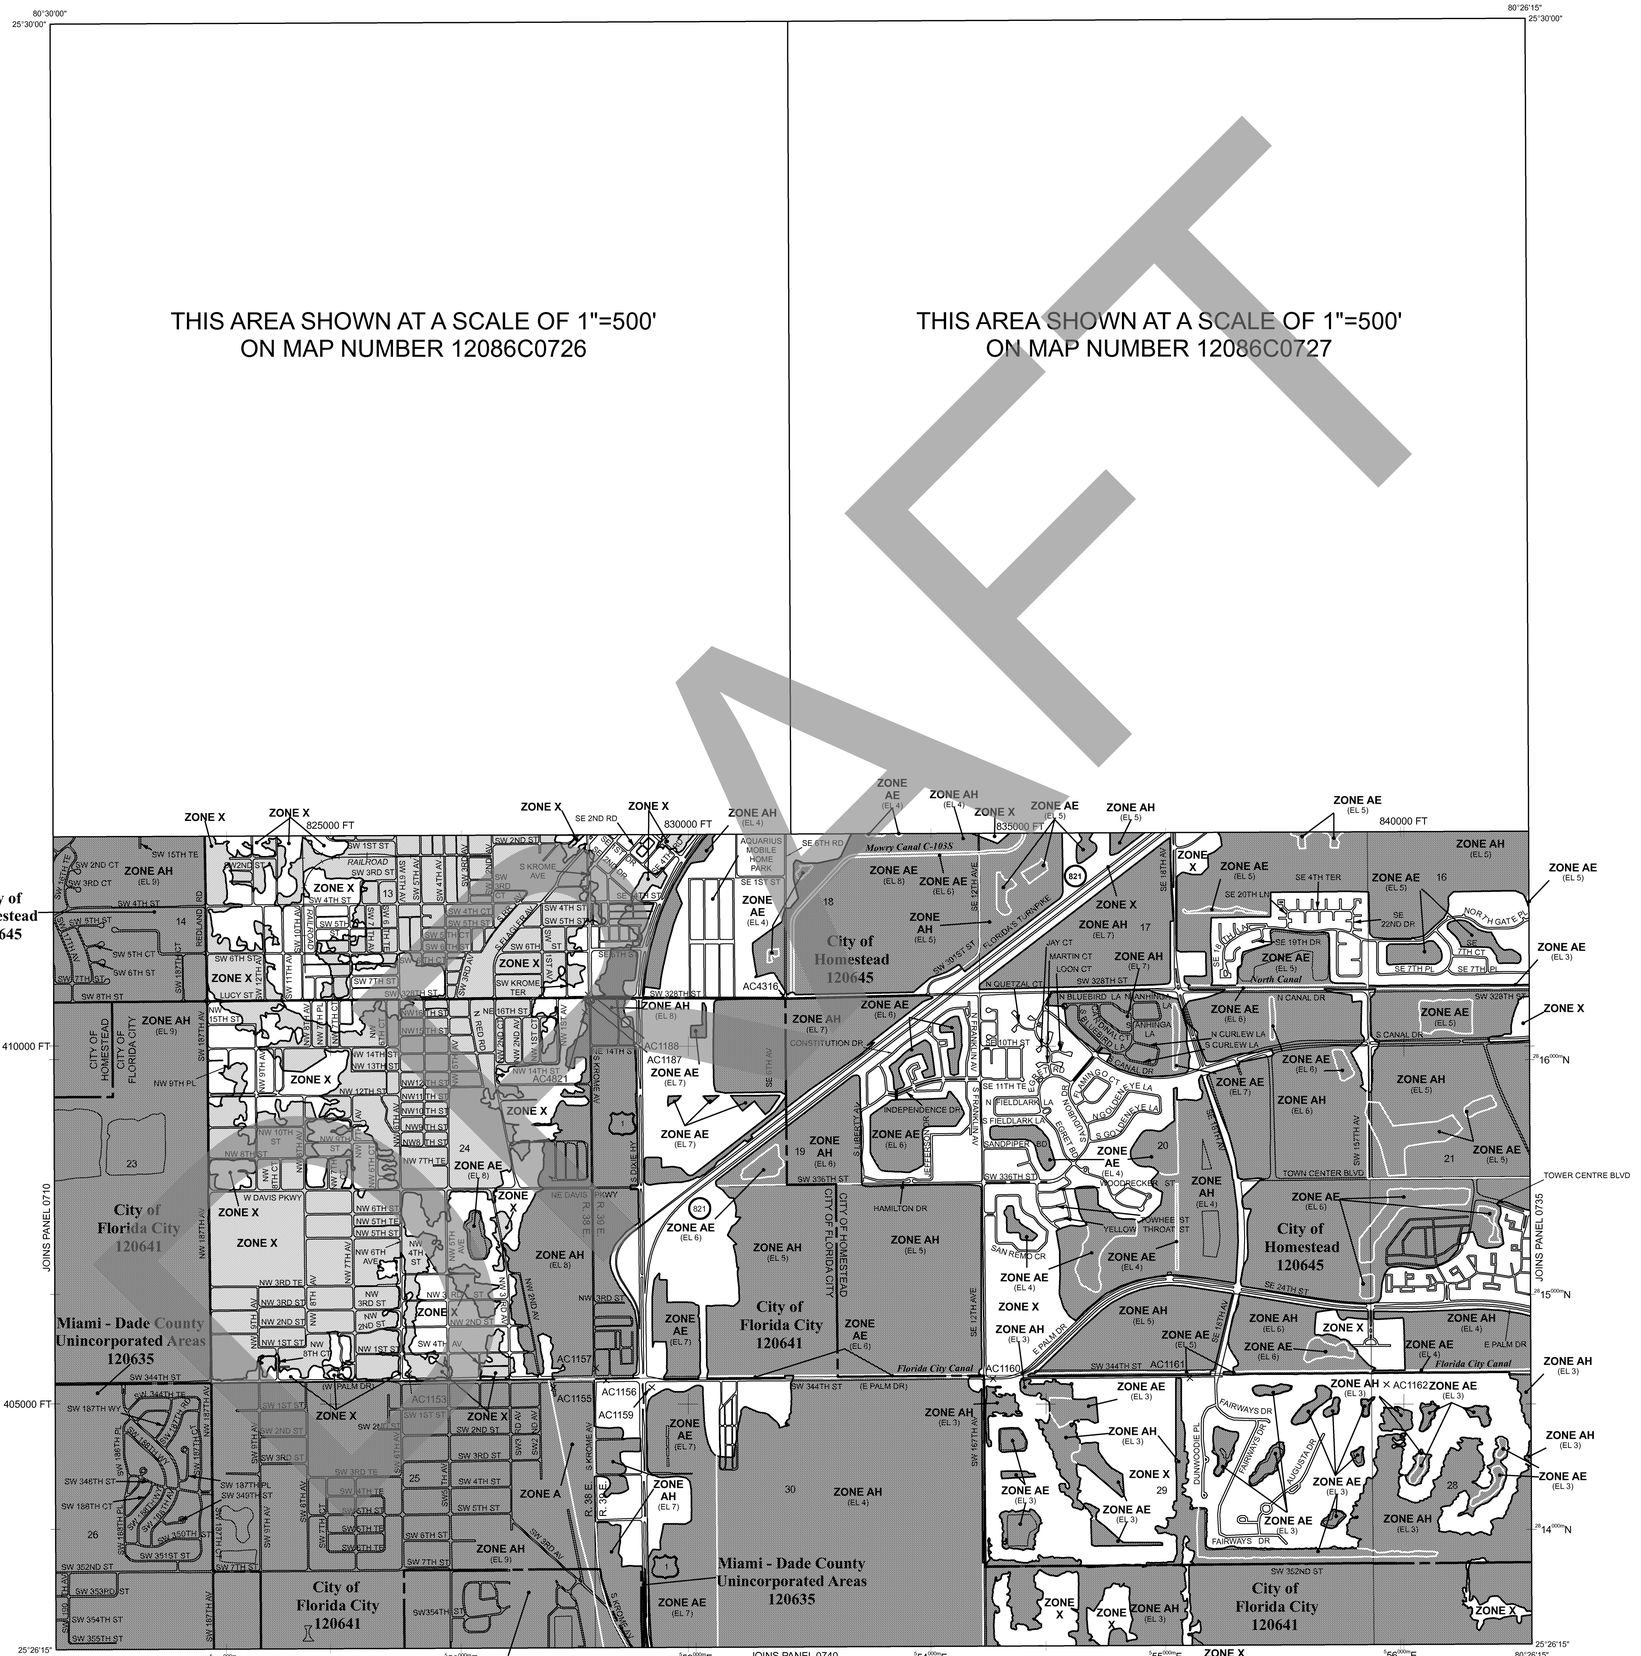

This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to confirm to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact the **FEMA Map Service Center** at 1-800-358-9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its website at http://msc.fema.gov.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov.

SAMPLE

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A	No Base Flood Elevations determined.
ZONE AE	Base Flood Elevations determined.
ZONE AH	Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
ZONE AO	Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE AR	Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
ZONE A99	Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
ZONE V	Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
ZONE VE	Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X	Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X	Areas determined to be outside the 0.2% annual chance floodplain.
ZONE D	Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- Floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Area zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.
- 513 — Base Flood Elevation line and value; elevation in feet*
- (EL 987) — Base Flood Elevation value where uniform within zone; elevation in feet*

* Referenced to the National Geodetic Vertical Datum of 1929

- A — A — Cross section Line
- 23 — 23 — Transect line
- 87°07'45", 32°22'30" — Geographic coordinates referenced to the North American Datum of 1983 (NAD 83), Western Hemisphere

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Miami-Dade County Area, Florida
Survey Area Data: Version 9, Oct 5, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Dec 31, 2009—Sep 16, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the

DRAFT

scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

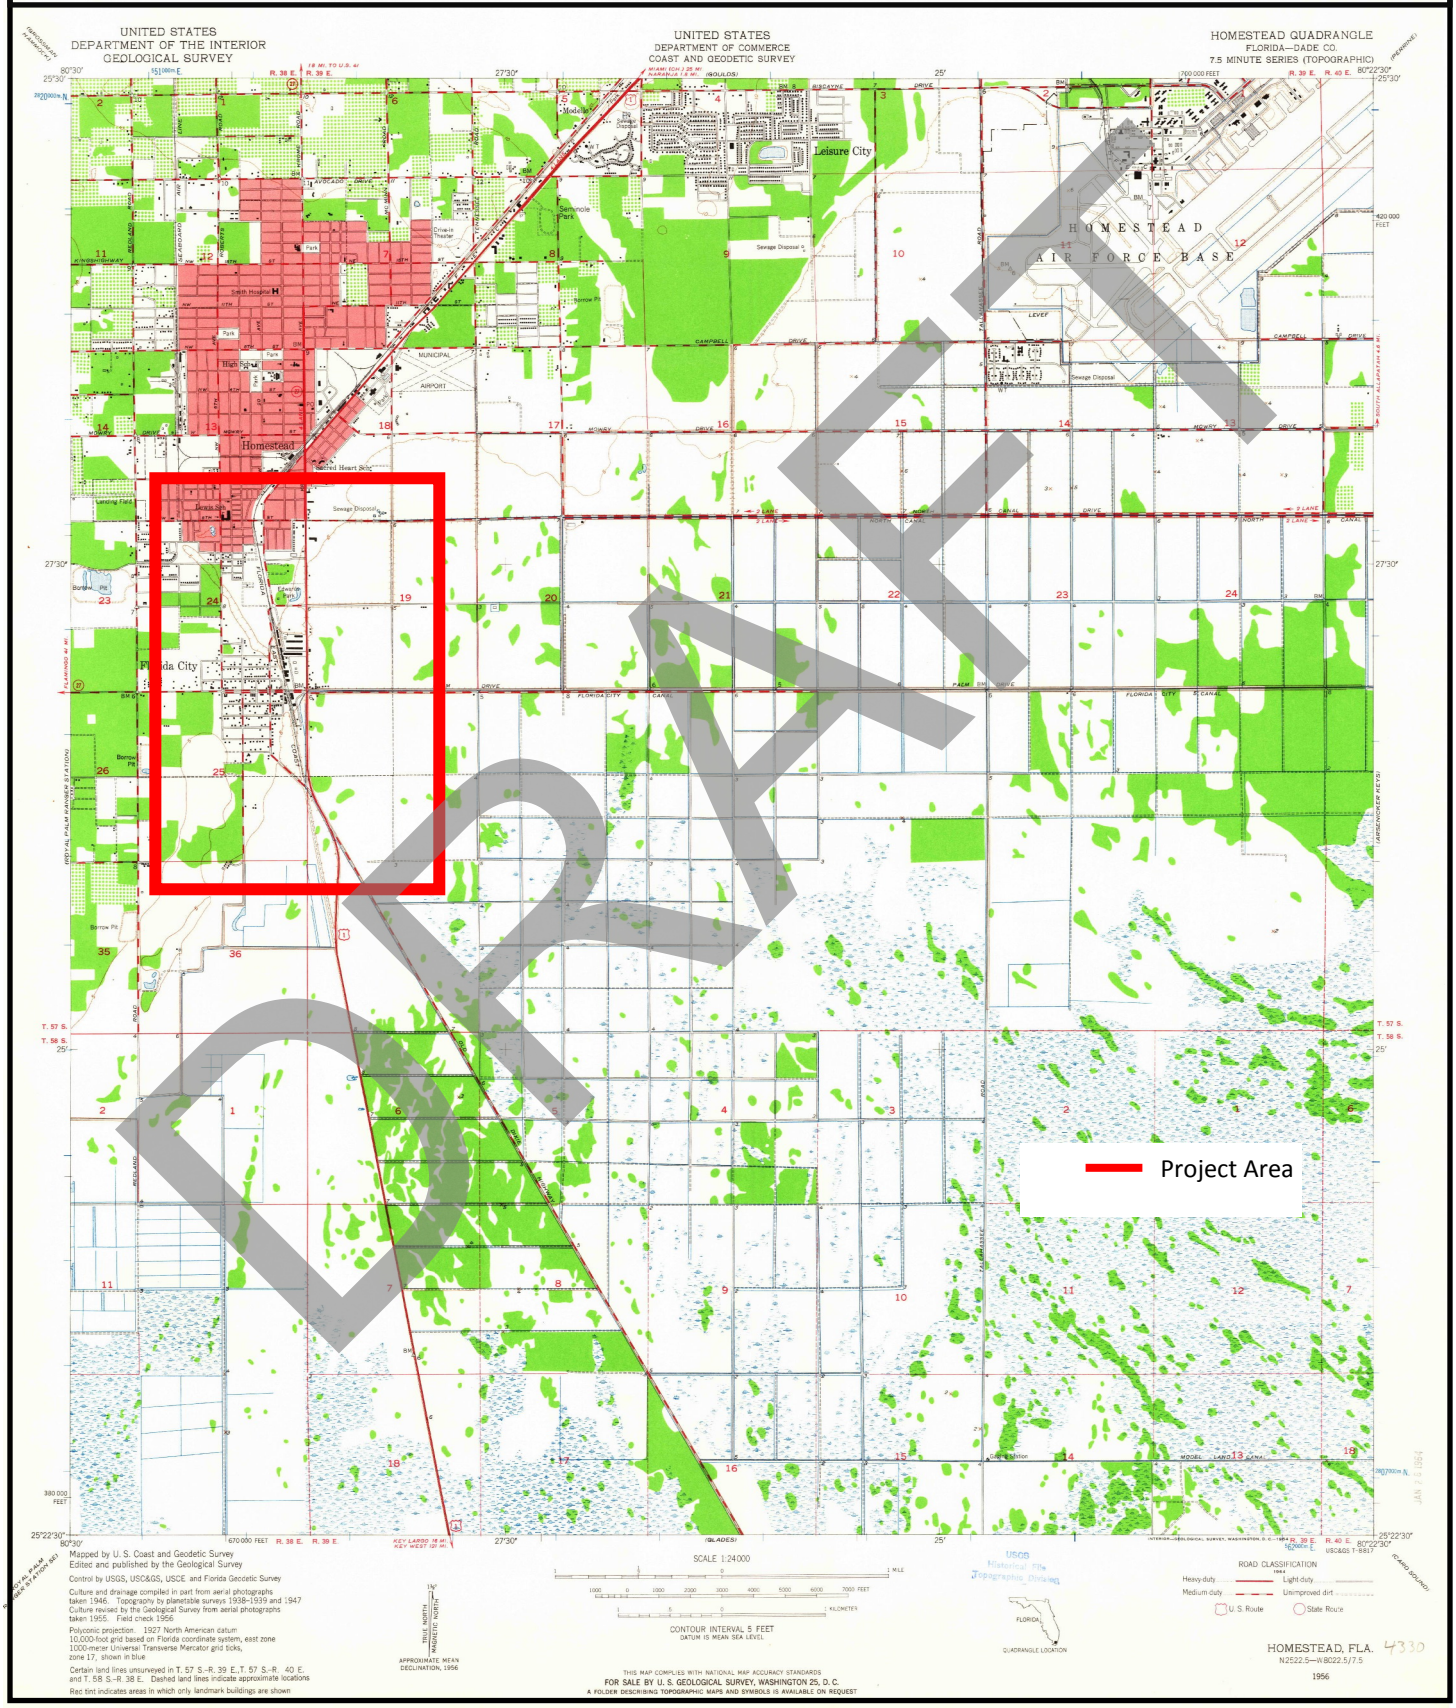

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

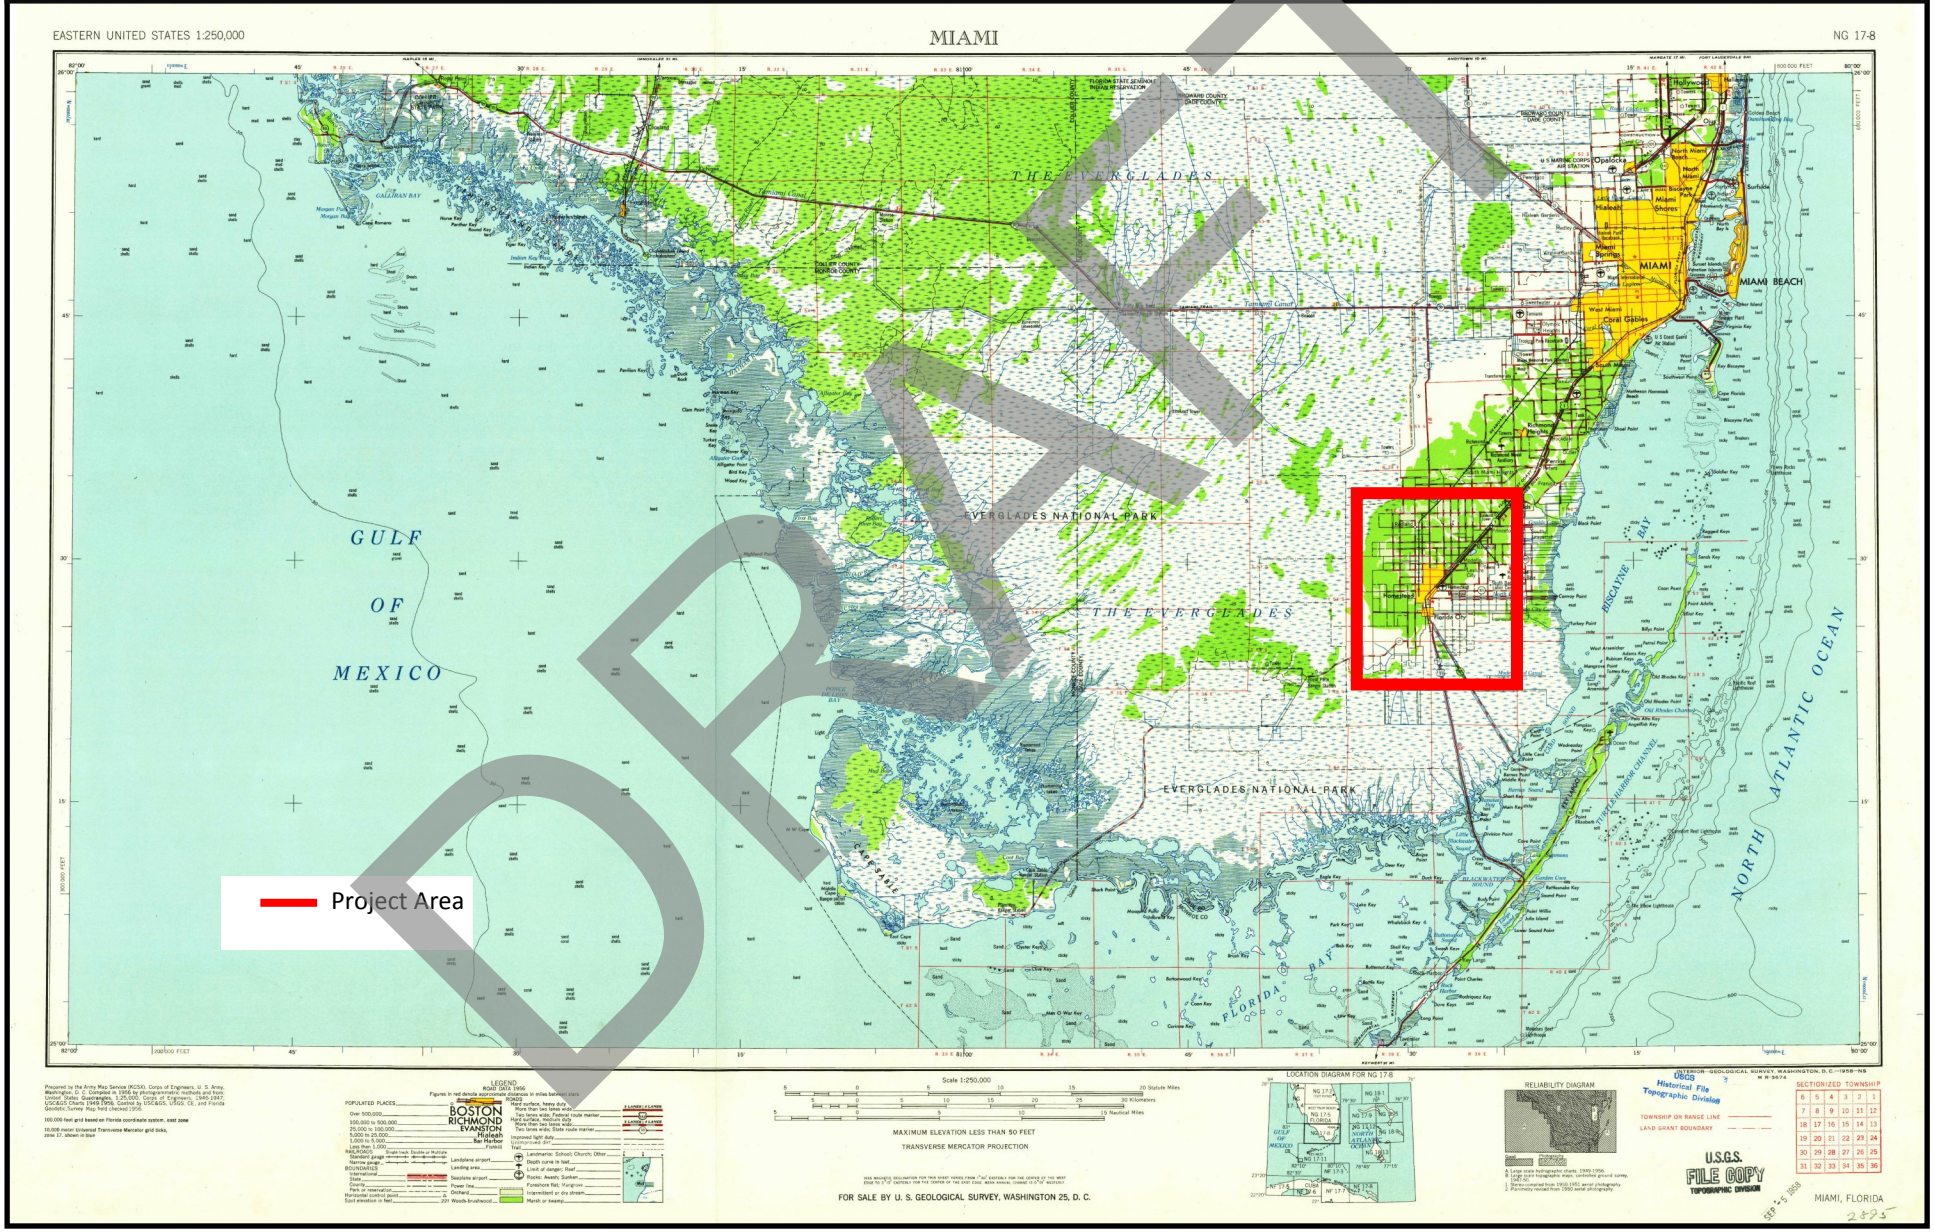

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Mr. Steven Karlik
Triple A Linen, Inc.
1466 NE Business Park Place
Jensen Beach, FL 34957

Subject: Site Rehabilitation Completion Order
Triple A Linen, Inc. (Truck Accident)
South Dixie Hwy @ 350th Street
Homestead, Miami-Dade County
FDEP Facility ID# 139807658
Discharge Date: October 29, 2004 (Non-program)

Dear Mr. Karlik:

The Miami-Dade County Department of Environmental Resources Management (DERM) has reviewed the Site Assessment Report (SAR) and Addendum and No Further Action Proposal (NFAP) dated August 13, 2007 and May 19, 2008 (received August 22, 2007 and May 21, 2008), prepared and submitted by Envirospec, Inc., for the petroleum product discharge referenced above. All the documents submitted to date are adequate to meet the site assessment requirements of Rule 62-770.600, Florida Administrative Code (F.A.C.). In addition, documentation submitted with the SAR/NFAP confirms that criteria set forth in Subsection 62-770.680(1), F.A.C., have been met. Please refer to the attached maps of the source property and analytical summary tables. The SAR/NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (SRCO). Therefore, you are released from any further obligation to conduct site rehabilitation at the facility for petroleum product contamination associated with the discharge referenced above, except as set forth below.

(1) In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the facility, the Florida Department of Environmental Protection (Department) may require site rehabilitation to reduce concentrations of petroleum products' contaminants of concern to the levels approved in the SAR/NFAP or otherwise allowed by Chapter 62-770, F.A.C.

(2) Additionally, you are required to properly abandon all monitoring wells, except compliance wells utilized to meet the release detection requirements of Chapter 62-761 or 62-762, F.A.C., within 60 days of receipt of this Order. The monitoring wells must be plugged and abandoned in accordance with the requirements of Subsection 62-532.500(4), F.A.C.

I arrived at the E side of S Dixie Hwy and ~ SW 350 St on 10/29/04 at 3:15pm to investigate a spill complaint. (Folio#30-7930-001-0410)
*
A large truck driven by Ken LaFantasie was forced off the road by another vehicle and ended up overturned in a wetland area/vacant land leaking diesel fuel. According to Ken, the saddle tanks were at least half full and each of the tanks holds 50 gallons when totally full. Thus, Captain Peacon with HAZMAT estimated that approximately 30-40 gallons leaked from the tanks until they were repaired by his crew.
*
The driver, Ken, stated that SWS Environmental had been contacted at 3:15pm to initiate clean-up of the wetland area.
*
Three samples were taken from the open ground area adjacent to the truck: BC#256424-FLPRO, BC#256425-VOA and BC#256426-PAH.
*
The truck is owned by Triple A Linen Inc located at 1466 NE Business Park Pl Jensen Beach, FL 34957. The phone number is 772-260-5566. The company owner is

Sunshine #06 (505 SE 1st Ave Florida City, FL 33034)
DERM UT#: 5421 / DEP Facility ID#: 13/9701266
Miami-Dade County – Storage Tanks

Dear Mr. Alvarez

A storage tanks inspection and file review were conducted at the above noted facility on or about 10/21/2019, by the Miami-Dade County Storage Tank Program, on behalf of the Florida Department of Environmental Protection. During the inspection and file review, potential non-compliance was noted. The purpose of this letter is to offer compliance assistance as a means of resolving this matter.

Specifically, potential non-compliance with the requirements of Chapter 376 and 403, Florida Statutes, and Chapter 62-761 or62-762, Florida Administrative Code (Fla. Admin. Code) was observed. Please see the attached inspection report for a full account of County observations and recommendations.

We request you review the item(s) of concern and respond in writing within 15 days of receipt of this Compliance Assistance Offer. Your written response should include one of the following:

1. Describe what has been done to resolve the non-compliance issue(s) or provide a schedule describing how/when the remaining issues will be addressed.
2. Provide the requested information, or information that mitigates the concerns or demonstrates them to be invalid.

It is the Department's desire that you are able to adequately address the aforementioned issues so that this matter can be closed. Your failure to respond promptly may result in the initiation of formal enforcement proceedings.

Please address your response and any questions to Alejandro DeZayas (dezaya@miamidade.gov/305-372-6524)

Sincerely,

Alejandro DeZayas

Miami-Dade County – Storage Tanks

Dear Maximo Alvarez:

The Miami-Dade County Storage Tank Program, on behalf of the Florida Department of Environmental Protection, personnel issued a Compliance Assistance Offer letter to the above-referenced facility on 10/29/2020. Based on the information provided on 01/16/2020, the facility was determined to have returned to compliance with the Department's Storage Tank rules and regulations.

The Department appreciates your efforts to maintain this facility in compliance with state and federal rules. Should you have any questions or comments, please contact Kelly Dashtaki at 305-372-6613 and/or Kelly.Dashtaki@miamidade.gov

Sincerely,

Kelly Dashtaki

10/21/2019
On site with Ms. Gabriela Albanese, Station Attendant, for a Routine Compliance Inspection of (2) 12,000 gallon, double wall, fiberclad steel USTs installed in 1997.

The registration information was verified and no changes were noted.

The State registration placard was current and properly posted on site.
Certificate of Financial Responsibility was not available for review (*C.A).
Annual Operability Test for release detection was done by Discovery Tank Testing on 05/29/2019 and passed.
Annual Inline Leak Detection Test was done by Discovery Tank Testing on 05/29/2019 and passed.
Overfill Protection Test for overfill protection device was done by Discovery Tank Testing on 05/29/2019 and

DRAFT

passed.
Sump Integrity Test was done by Discovery Tank Testing on 10/11/2019 and passed.
Dispenser Liner Integrity Test was done by Discovery Tank Testing on 10/11/2019 and passed.
Double-wall Spill Bucket Integrity Test was done by Discovery Tank Testing on 10/11/2019 and passed.
Monthly Visual, Electronic Detection, and Monitoring Well logs are available, 36 months noted. The logs are done by Discovery Tank Testing.
Operator Training Certification A/B and Cs were available for review.

Electronic release detection is monitored through the Veeder Root TLS-350. All functions were normal at the time of the inspection. The sensors monitor the (2) STP Sumps. The tank interstices are monitored through vacuum gauges which were checked by Discovery Tank Testing on 05/29/2019 and passed. No fuel alarms noted. The visual and audio alarms are working.

There are a total of (4) dispensers on site. The dispenser liners were dry and the shear valves appeared to be properly braced. Very light dripping was noted on the piping within Dispenser 5/6 (*C.A). The filter is also dripping within Dispenser 5/6 (*C.A). No other leaks or dripping noted on components within the other dispensers. Hoses and nozzles are intact, except the whip hose above the breakway on Dispenser 7, and the dry/brittle hoses on Dispenser 1 and 8 (*C.A).

Fill port & vapor recovery lids were properly color-coded/labeled as per API standards.
Fill port & vapor recovery watertight caps contained gaskets and had tight seals.
Fill port & vapor recovery spill containment buckets were dry.

All the STP sumps were dry and contain mechanical line leak detectors. No corrosion noted on STP components. The piping boots were pulled back for release detection and the sensors were correctly positioned below piping. The Premium STP piping boot appears to be breaking away from the STP (*A.O.C). The Sump Integrity Test passed on October 11, 2019.

There are a total of (8) monitoring wells on site as per Approved Plans (05/29/1997).
All monitoring well concrete pads and lids were intact and properly color coded.
All monitoring well watertight caps were locked or properly secured and contain gasket.
All monitoring well collars/risers were at least 1 inch above the surface and the containment appears to be properly grouted.
The monitoring well groundwater could not be visually checked during today's inspection. The monitoring well pvc is about 1.5in and too small for the bailer.

The Lat/Long Coordinates have been updated on Maps Direct.

A site diagram was drawn and pictures were taken.

A copy of the report will be submitted via email to Ms. Melissa Campos, Sunshine Stations Maint (mcampos@ssminc.com), and will be added to the electronic communications tab.

The facility has 30 days to correct all violations before a Uniform Civil Violation Notice is issued to the property for failure to comply by F.A.C Chapter 62-761 and Miami-Dade County Chapter 24 in a timely manner.

(*C.A) – Compliance Assistance violation (to be resolved within 30 days)
(*A.O.C) – Area of Concern (to be monitored and resolved by next compliance inspection)

FDEP Facility ID# 139701266
DERM UT-5421/File-15657
Discharge Date: March 3, 1999 (Non-program)

Dear Mr. Alvarez:

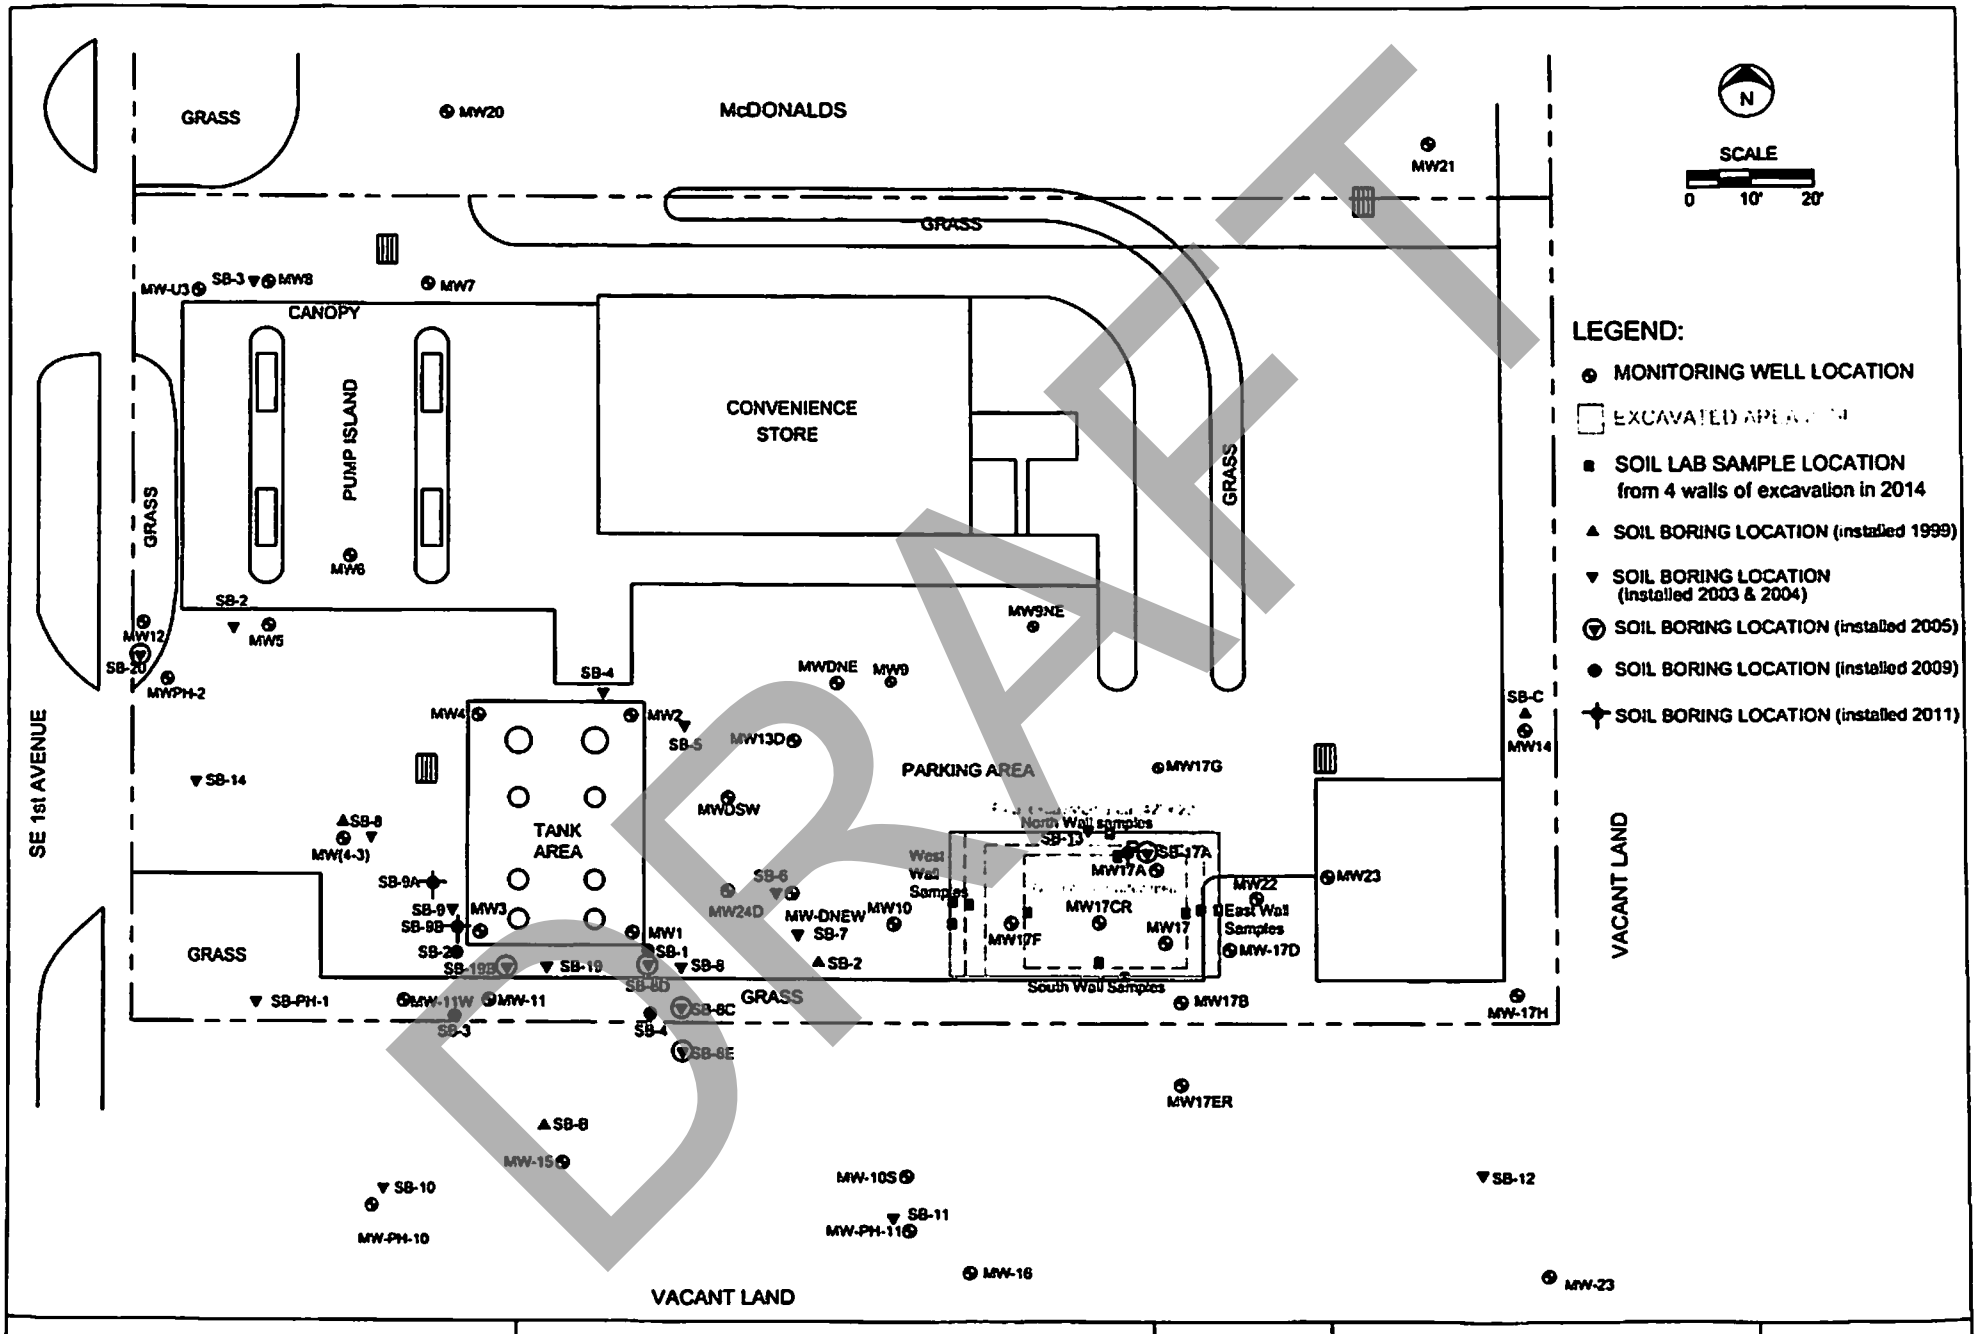

The Miami-Dade County Department of Regulatory and Economic Resources-Division of Environmental Resources Management (DERM), on behalf of the Florida Department of Environmental Protection (Department) has reviewed the Site Rehabilitation Completion Report (SRCR) and No Further Action Proposal (NFAP) dated January 29, 2016 (received February 8, 2016), for the petroleum product discharge referenced above. Documentation submitted with the SRCR/NFAP confirms that criteria set forth in Subsection 62 780.680(1), Florida Administrative Code (F.A.C.), have been met. Please refer to the attached maps of the source property and analytical summary tables, Exhibits A and B respectively and hereby incorporated by reference. The SRCR/NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (Order). Therefore, you are released from any further obligation to conduct site rehabilitation at the facility for petroleum product contamination associated with the discharge referenced above, except as set forth below.

(1) In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the facility, the Department may require site rehabilitation to reduce concentrations of petroleum products' contaminants of concern to the levels approved in the SRCR/NFAP or otherwise allowed by Chapter 62-780, F.A.C.

(2) Additionally, you are required to properly plug and abandon all monitoring wells, injection wells, extraction wells, and sparge wells within 60 days of receipt of this Order unless these wells are otherwise required for compliance with a local ordinance or another cleanup. The wells must be plugged and abandoned in accordance with the requirements of Subsection 62-532.500(5), F.A.C.

Dear Mr. Patel:

The Miami-Dade County Storage Tank Program, on behalf of the Florida Department of Environmental Protection, personnel issued a Compliance Assistance Offer letter to the above-referenced facility on 07/17/2019. Based on the information provided, the facility was determined to have returned to compliance with the Department's Storage Tank rules and regulations.

The Department appreciates your efforts to maintain this facility in compliance with state and federal rules. Should you have any questions or comments, please contact Alejandro DeZayas (dezaya@miamidade.gov/305-372-6524).

Sincerely,

Alejandro DeZayas

Subject: Site Rehabilitation Completion Order
Mobil-ATJ
413 SE 1st Avenue
Florida City, Miami-Dade County
FDEP Facility ID# 139601173
Discharge Date: 12/19/1997, PLRIP

Dear Mr. Patel:

The Petroleum Restoration Program (PRP) has reviewed the LSSI Site Assessment Report (SAR) and No Further Action Proposal (NFAP) dated June 17, 2017 (received June 19, 2017) and the Monitoring Well Abandonment Report dated September 27, 2017 (received September 27, 2017), for the petroleum product discharge referenced above. All the documents submitted to date are adequate to meet the site assessment requirements of Rule 62-780.600, Florida Administrative Code (F.A.C.). In addition, documentation submitted with the SAR/NFAP confirms that criteria set forth in Subsection 62-780.680(1), F.A.C., have been met. Please refer to the attached maps of the source property and analytical summary tables, Exhibits A and B respectively and hereby incorporated by reference. The SAR/NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (Order). Therefore, you are released from any further obligation to conduct site rehabilitation at the facility for petroleum product contamination associated with the discharges referenced above, except as set forth below.

In the event concentrations of contaminants of concern are detected above the levels approved in this Order, the department will reevaluate the contamination and reinitiate State-funded site or discharge rehabilitation to reduce concentrations of contaminants of concern to the levels approved in the Order or otherwise allowed by Chapter 62-780, F.A.C., in accordance with the State-funded eligibility provisions that are applicable for the site or discharge. This includes any confirmed impacts found to be migrating beyond the site's property boundary. If groundwater is being used for potable uses in the area affected by the contamination, the Department will take all necessary steps to protect public health, safety and welfare under Chapter 376, F.S., as necessary. If a new or subsequent discharge occurs at the facility that is not eligible for state funding, the contamination must be evaluated and addressed as provided in Chapter 62-780, F.A.C.

Inspection Comments

02/15/2019

On site with Mr. Val Popoca (AET Compliance Technician, 863-205-2250) for an annual compliance inspection of two 12,000 gallon (one is compartmented and both were installed in 10/01/2008) and one 8,000 gallon (compartmented,installed in 10/01/2011), double-wall, fiberglass, clad steel, underground storage tank (USTs). In addition a 2,000 gal (installed in 08/01/2010), steel double wall aboveground storage tank (AST). The 8,000 gal UST was placed out-of-service on 02/15/2019.

The registration form was filled out and submitted to tankregistration@dep.state.fl.us with the updated 8,000 gal UST status.

The State registration placard 2018-2019 was current and properly posted on site.

DRAFT

Operator Training Certifications Class A, B or C was not available at the time of inspection. (*)

Certificate of financial responsibility is available and current. Facility is insured by Liberty Surplus Insurance Co (policy # TXENYB12757219) and coverage is running from 01/01/2019 to 01/01/2020.

Annual operability of the ATG, overfill protection devices and annual inline leak detectors was done by Petro Environmental Consultant Services INC. (PECS) on 2/15/2019 and passed.

Integrity testing of dispenser liners and STP sumps was performed by Petro Environmental Consultant Services INC. (PECS) on 11/20/18 and passed. Integrity testing of d/w spill buckets was performed by Clemens Fuel Systems on 09/17/2017 and passed.

Monthly visual, electronic detection and monitoring well logs are available, 26 months noted. The logs are done by AETC. (12/13/16-01/11/2019)

Electronic release detection is monitored through the Veeder-Root (TLS -350). The visual and audio alarms are working. The Veeder Root was free of alarms at the time of the inspection. The liquid status report was obtained and all sensors appeared normal. The device monitors sensors inside the tanks interstitial space (3) and the five (5) STP sumps.

There are a total of seven (7) dispensers on site.The dispenser liners were dry and the shear valves appeared to be properly braced. Hoses are intact.

Fill port & vapor recovery lids were properly color-coded, as per API standards.
Fill port & vapor recovery watertight caps contained gaskets and had tight seals.
Fill port & vapor recovery spill containment buckets were dry.

All the STP sumps contain mechanical line leak detectors. No corrosion was noted on STP components. The piping boots were pulled back for release detection and the sensors were correctly positioned below piping.

There is a total of eighteen (18) monitoring wells on site (plus additional compliance wells), as per approved plans.

All monitoring well concrete pads and lids were intact and properly color coded.
All monitoring well watertight caps were locked or properly secured and contain gasket.
All monitoring well collars/risers were at least 1 inch above the surface and the containment appears to be properly grouted.
No visual evidence of free floating product or sheen observed, as well as no odors were detected during the inspection in all monitoring wells.
During the time of inspection, the water column levels were determined adequate for release detection meeting the 3 ft requirement.

--- 2,000 gal AST

The tank appeared to be in okay condition with minor signs of corrosion, weathering, cracking. No petroleum staining was observed on the exterior or the concrete pad around the tank. The tank is properly anchored and equipped with isolation valves.

The interstitial space is monitored through a mechanical site gauge. The interstitial space appears to be dry.

DRAFT

Product level is monitored through both Morrison clock gauge and audible alarm. However the audio alarm was not working. (*)

An annual operability test result for release detection (Krueger gauge) was done by Petro Environmental Consultant Services INC. (PECS) on 02/15/2019 and passed.

Certification of the overfill protection devices was not available during the inspection. (*)

The associated piping for the tank runs aboveground and it appeared to be in okay conditions with minor visible signs of corrosion cracks or leaks.

The remote fill port spill containment box was not properly marked as per API standards. (*)

The fill port spill containment box was free of liquid at the time of the inspection and the fill port is equipped with a cap that keeps a tight seal.

A site diagram was generated and pictures were taken.

*Violations noted must be corrected within 30 days. If the deficiency is not corrected within the allotted time, the facility will be referred for enforcement. Enforcement may result in the issuances of a Uniform Civil Violation Notice (UCVN).

1) Replace overfill alarm battery then retest for AST overfill protection devices (high/low alarm and clock gauge).
2) Properly label Simplex fill box with API color coding (REC 90-blue with white cross).
3) Update registration to reflect ethanol in the fuel.
4) Provided class A/B and C operator certification of facility employees.

A copy of the inspection report will be sent via email to the station representative Ms. Patti McCord at pmccord@aetllc.com. The electronic communication will be added to FIRST.

A Sump Integrity Test must be conducted by October 13th, 2018, as per Chapter 62-761 F.A.C., and every three (3) years thereafter to certify its integrity. A copy of the test results must be kept on file for review.

**Double wall-A Spill Bucket Integrity Test must be conducted by October 13th, 2018, as per Chapter 62-761 F.A.C., and every three (3) years thereafter to certify its integrity. A copy of the test results must be kept on file for review.

Operator Training Certifications Class A, B or C was not available at the time of inspection. In accordance with Chapter 62-761 F.A.C., the facility has until October 13th, 2018 to obtain certifications. Information on obtaining the certification can be found at: (http://www.dep.state.fl.us/waste/categories/tanks/pages/op_train.htm).

OFFICE FOLLOW-UP

This office follow up was conducted to close the non-compliance items noted during the annual compliance inspection conducted on 02/07/2019.

1. Replace missing vapor recovery watertight cap.
2. Remove petroleum contact water (PCW) in Supreme STP sump and vapor recovery fill port
3. Remove corrosion noted on Unleaded (E-10) STP sump and vent stacks.

An email was received with photos that the non-compliance items have been resolved. The missing vapor recovery cap was replaced. The PCW noted within the supreme STP sump and vapor recovery fill port was removed. The corrosion previously noted on the E-10 STP sump and vent stacks was removed by Great Dane Petroleum then repainted.

Documentation has been added to the inspection report. The inspection report is now closed.

There is no representative signature as the report was completed as an office follow-up. A copy of the report along with an In-Compliance letter will be emailed to facility Zachary Davis at ZDavis2@speedway.com and the email will be added to the electronic communication tab in FIRST.

(UT-3326/File-11747)
Discharge Dates: June 4, 1999 (Non-program)
August 16, 2007 (Non-program)

Dear Mr. Schenkewitz:

The Miami-Dade County Department of Environmental Resources Management (DERM), on behalf of the Florida Department of Environmental Protection (Department), has reviewed the Site Rehabilitation Completion Report (SRCR) and No Further Action Proposal (NFAP) dated April 6, 2011 (received April 11, 2011), prepared and submitted by Earth Systems for the petroleum product discharges referenced above. Documentation submitted with the SRCR/NFAP confirms that criteria set forth in Subsection 62-770.680(1), Florida Administrative Code (F.A.C.), have been met. Please refer to the attached maps of the source property and analytical summary tables. The SRCR/NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (Order). Therefore, you are released from any further obligation to conduct site rehabilitation at the facility for petroleum product contamination associated with the discharges referenced above, except as set forth below.

(1) In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of

FLORIDA CITY, FLORIDA

There is only one independent document in OCULUS listed under 8628847 (Gateway Village). The facility ID 8628847 is hand written on this document. The address referred to in the document is 10 SE 1st Ave, not the 11 SE 1st Ave address listed in STCM for 8628847. The address 10 SE 1st Ave is applicable to another facility in STCM, 8506213 (SHELL-GATEWAY).

The document names the property owner as Motiva and refers to the property as "Texaco." Review of deeds for the 8506213 (SHELL-GATEWAY) shows transfer of property from Texaco to Motiva to Gateway, present owner. Deed review for 8628847 (Gateway Village) indicates Allen J Bennett to Allen Bennett Corp.

A review of OCULUS documents for , 8506213 (SHELL-GATEWAY) reveal receipts submitted for reimbursement that name the parties in the one document for 8628847 (Gateway Village). This strongly suggests the document is misfiled and should be file under, 8506213 (SHELL-GATEWAY).

That leaves only the address in STCM as providing the location for 8628847 (Gateway Village). There is one report from the, 8506213 (SHELL-GATEWAY) file that provides an area map showing a Fina station at the 11 SE 1st Ave address. Aerial photos, however, don't clearly indicate a gas station at that location.

In conclusion, the facility under 8628847 (Gateway Village) could be a duplicate of the 8506213 (SHELL-GATEWAY) or it could be a Fina gas station, as indicated by one contractor area map. There is no other facility in STCM that has the address 10 SE 1st Ave.

Doh is at the incorrect address of 11 1st Rd instead of 11 1st Ave

Codes and Instructions for Use in Question 5:

CONTENTS:
A = leaded gasoline
B = unleaded gasoline
C = unleaded gasohol
D = vehicular diesel
F = aviation gas
G = jet fuel
K = kerosene
L = used (waste) oil
(M) = diesel (boilers & generators)
N = leaded gasohol
O = new oil
P = pesticide (write in name) _____
R = ammonia compound (write in name) _____
S = chlorine compound (write in name) _____
Z = other (write in name) _____
V = hazardous substances (write in name) _____

STATUS:
(U) = currently in use
T = Temporarily out of use with intent for future use

If permanently out of use indicate whether:
A = abandoned and filled with an inert material
E = abandoned and left empty
F = abandoned with product remaining
B = removed from location

PLACEMENT:
Underground:
U = underground (10% or more buried)

Aboveground:
(more than 90% is not buried)
C = incontact with ground (pervious base)
(A) = elevated above ground
No skid or portable tanks

DRAFT

SITE SUMMARY PACKAGE
Shell Gateway Fac# 8506213

Site Location

The site is an active Shell station located at 10 Southeast 1st Avenue, Florida City, Miami-Dade County, Florida. According to the FDEP Storage Tank Database, the underground storage tank (UST) system consists of three (3) 12,000-gallon fiberglass double-walled UST used to store various grades of unleaded gasoline and (1) 10,000 gallon fiberglass double walled UST used to store vehicular diesel.

Discharge and Program Information

According to the FDEP database, the site has five reported discharges:

05/01/1985 (EDI): Free floating product was noted in an onsite monitoring well. The source of the hydrocarbons originated from the USTs which were removed in May 1985.

11/18/1994 (PLRIP): An alarm on the UST system indicated the premium tank was taking in water. The cause of the discharge and the amount discharged was listed as unknown.

12/30/1998 (PLRIP): Analytical results reported during a groundwater sampling event indicated a new discharge had occurred. The cause of the discharge and the amount discharged was listed as unknown.

03/28/2003 (SRFA): Analytical results reported during a groundwater sampling event indicated a new discharge had occurred.

03/21/2005 (SRFA): OW-1, OW-3 and OW-5 exhibited contaminate levels above Natural Attenuation Default Concentrations (NADCs). In a DERM correspondence dated May 11, 2005, DERM again rescinded the Natural Attenuation Monitoring Plan based on the evidence of a new discharge at the facility.

Lithology

Site specific geology was been evaluated during installation of onsite soil borings and monitoring wells during previous assessment activities. Lithology of the property was described as weathered limestone to depths of at least 10 ft bls.

Groundwater Flow

Groundwater has been encountered ranging from 3.65 to 5.54 ft bls. Groundwater flow in the absence of active remediation has historically been variable, documented toward the west, northeast and east.

Site Assessment and Remedial Action History

A hydrogeological investigation was initiated at the site in May 1985 when Liquid Phase Hydrocarbons (LHP) was observed floating in one existing monitoring well. In order to inhibit the migration of the LPH and dissolved hydrocarbons, a remedial system was installed.

The groundwater remediation system at the site became fully operational during October 1985. A Contamination Assessment Report (CAR) and two (2) Addenda were prepared in 1988 and 1989 and approved by DERM on December 8, 1989 A Remedial Action Plan (RAP) and

DRAFT

Addendum were subsequently prepared and approved by FDEP on October 25, 1990. A revised groundwater remediation system was subsequently installed and remained active until August 24, 1992, when winds associated with Hurricane Andrew destroyed the system. The system was reactivated in December 1992.

On March 14, 1995, DERM issued a letter requesting the preparation of a CAR at the request of Texaco Refining and Marketing Inc. Two (2) complete rounds of sampling and additional monitoring well installation were completed prior to the preparation of the supplemental CAR, which was submitted in July 1996. DERM completed review and approved the Site Assessment Report (SAR) Addendum and Monitoring Only Proposal for Natural Attenuation Monitoring.

The facility was sold to Shell Oil Company in 1993 and the site was razed and rebuilt and the USTs were relocated. On September 23, 1993, IT Corporation installed seven (7) monitoring wells (4'') on the site. All previous monitoring wells were abandoned before the demolition took place at the site.

A limited source removal was conducted in the immediate area of OW-2 in August of 2002. An Annual Status Report dated December 2002 was submitted by Shaw Environmental regarding petroleum discharges discovered on May 1, 1985 and December 30, 1998. After DERM review, a Monitoring Only Plan (MOP) was approved. DERM review of the subsequent Quarterly Status Report (QSR) dated February 2003 indicated that levels of Natural Attenuation Default Concentrations (NADC) were exceeded in four monitoring wells and the MOP was rescinded.

A Limited Contamination Assessment Report (LCAR) was submitted in February 2004. The LCAR indicated that elevated levels observed in the quarterly summary report dated February 2003 were related to historical contamination and not associated with a more recent hydrocarbon release. A Templated Site Assessment Report was submitted in October 2004 resulting in Natural Attenuation Monitoring. The TSAR and Natural Attenuation Monitoring Plan was approved in November 2004. Within the Year One/Quarter One Natural Attenuation Monitoring Report, OW-1, OW-3 and OW-5 exhibited contaminate levels above Natural Attenuation Default Concentrations (NADCs). In a DERM correspondence dated May 11, 2005, DERM again rescinded the Natural Attenuation Monitoring based on the evidence of a new discharge at the facility.

The results of the soil investigation in 2006 indicated limited soil contamination in the immediate area of SB-3. Soil contamination appears to be present to a limited extent along the northern portion of the site around or near the USTs. These findings are similar to those documented m the February 2004 LCAR.

In 2006, elevated levels of contamination were present in monitoring wells OW-1, 3, and 5.

In May 2014, Shell completed voluntary groundwater monitoring. Contaminant concentrations above GCTLs were detected in MW-3A.

In July 2014, JAW, Inc. personnel collected groundwater samples at monitoring well MW-3A for laboratory analyses upon request by DERM. In MW-3A, the total xylenes concentration was 1,700 parts per billion (ppb) versus of 1,200 ppb reported for the February 24, 2014 sampling event. Several other target analytes were reported at concentrations in excess of groundwater target cleanup levels.

DRAFT

SITE SUMMARY PACKAGE
Shell Gateway Fac# 8506213

In March 2017, CEC, JV LLC mobilized to the site to oversee the advancement of SB-5A and SB-14 through SB-30. Soil samples were collected from each boring using a split-spoon sampler and screened in the field for the presence of petroleum hydrocarbon vapors using an organic vapor analyzer (OVA) equipped with a photo ionization detector (PID). Thirty-six (36) soil sample were collected and submitted for laboratory chemical analyses.

Concentrations above SCTLs were reported in SB-5A (2-4 ft bls), SB-19 (2-4 ft bls) and SB-21 (0-2 and 2-4 ft bls). All four (4) of these locations exhibited OVA readings less than 15 ppm.

On May 20, 2019, CEC mobilized to the site to conduct groundwater sampling. CEC recorded water levels from NAM monitor wells MW-2A, MW-3A, MW-1A, DW-1, MW-12, MW-5A, MW-43, MW-44, MW-45, MW-46 and observation wells OW-1, OW-3, OW-2R, OW-5.

During the May 20-21, 2019, NAM sampling event petroleum hydrocarbon contaminant levels:

- were above the GCTL for **benzene** in monitoring wells OW-1 and OW-3, but all were below NADC.
- were above the GCTL for **total xylenes** in monitoring wells OW-1, but all were below the NADC.
- were above the GCTL for **1-methylnaphthalane** in monitoring well MW-3A, but it was below the NADC.
- were above the GCTL for **2-methylnaphthalane** in monitoring well MW-3A, but it was below the NADC.
- were above the GCTL for **MTBE** in monitoring well OW-1 and OW-3, but they were below the NADC.

Field Inspection Summary Form

The Field Inspector's primary role is to observe. Inspectors may not authorize changes in scope of work, offer advice, or in terfere in contractor work. Field Inspectors must obtain a copy of the Work Order or Task Assignment (WO or TA) for the scope of work to be observed. The fiel d inspector will review the WO/TA prior to arrival and will have it onsite. If anything is observed that requires immediate attention, the inspector wil l contact the FDEP Site Manager. This form is a summary of observations made during the site visit. Full details are provided in the inspector's log book. A copy of the inspector's log book pages and any photographs taken for this inspection are attached.

Subject: Task 1 Deliverable Review (Level 3 Limited Scope Remedial Action Plan Modification (LSRAPM) Addendum)
Sunkwik #1 – Just Oil
237 North Krome Ave, Florida City
Miami-Dade County
FDEP Facility ID# 138622180
DERM UT-225/File-7014
Discharge Date: February 28, 1991 (PLRIP/60)
PO # B40A84, LSRAPM Addendum

Dear Mr. Crowe and Mr. and Mrs. Chavez:

The Miami-Dade County Department of Regulatory and Economic Resources-Division of Environmental Resources Management (DERM), on behalf of the Florida Department of Environmental Protection (FDEP) has reviewed the Limited Scope Remedial Action Plan Modification (LSRAPM) Addendum dated December 19, 2019 (received December 19, 2019), submitted for this facility. The RAPM is acceptable and demonstrates that the work outlined in Purchase Order # B40A84 for Task 1 was satisfactorily performed. Therefore, the LSRAPM dated February 5, 2019 inclusive of supplemental information dated through December 19, 2019 (received December 19, 2019) is hereby approved with the following condition:

> As stated in the DERM electronic mail dated September 5, 2019 (see attached), prior to backfilling the excavation, a temporary well shall be installed in the center of the excavation and sampled for BTEX and PAHs, no sooner than 10 days after the completion of the air sparging activities, to confirm the results of the remediation. Note that backfilling shall not proceed until DERM has reviewed and approved the said groundwater sampling results.

Delivering Excellence Every Day

Please be advised that the Task 1 Deliverable Response to Comments, Addendum #1, received on April 17, 2019, was due March 6, 2019 (42 days late) and the Task 1 Deliverable, Addendum #2, received on May 29, 2019, was due May 27, 2019 (2 days late). Since the Task 1 Deliverable was received after the due date with no due date extension approved in MFMP, the retainage for the Task 1 Deliverable ($302.00) will be forfeited. Accordingly, the approved cost for completion of Task 1 is $5,738.00 ($6,040.00 - $302.00), as detailed in the attached SPI rate sheet for the subject site. Please submit your invoice to FDEP within thirty (30) days of receipt of this letter.

Please proceed with the implementation of Task 2 of the aforementioned PO.

Miami-Dade County – Storage Tanks

Dear Mr. Clyde:

The Miami-Dade County Storage Tank Program, on behalf of the Florida Department of Environmental Protection, personnel issued a Compliance Assistance Offer letter to the above-referenced facility on 08/07/2019. Based on the information provided, the facility was determined to have returned to compliance with the Department's Storage Tank rules and regulations.

The Department appreciates your efforts to maintain this facility in compliance with state and federal rules. Should you have any questions or comments, please contact Alejandro DeZayas (dezaya@miamidade.gov/305-372-6524).

Sincerely,

Alejandro DeZayas

Florida City, Miami-Dade County
FDEP Facility ID# 139802395
Discharge Dates: April 20, 2004 and September 27, 2010 (Non-program)
Discharge Score: 30

Dear Mr. Clyde:

The Miami-Dade County Department of Regulatory and Economic Resources-Division of Environmental Resources Management (DERM), on behalf of the Florida Department of Environmental Protection (Department), has reviewed the Supplemental Site Assessment Report (SSA) and Addenda and No Further Action Proposal (NFAP) dated May 19, 2011 through August 19, 2013 (received May 20, 2011 through August 20, 2013), prepared and submitted by Taylor Environmental Consulting and PPM Consultants for the petroleum product discharges referenced above. All the documents submitted to date are adequate to meet the site assessment requirements of Rule 62-780.600, Florida Administrative Code (F.A.C.). In addition, documentation submitted with the SSAs/NFAP confirms that criteria set forth in Subsection 62-780.680(1), F.A.C., have been met. Please refer to the attached maps of the source property and analytical summary tables. The SSAs/NFAP are hereby incorporated by reference in this Site Rehabilitation Completion Order (Order). Therefore, you are released from any further obligation to conduct site rehabilitation at the facility for petroleum product contamination associated with the discharges referenced above, except as set forth below.

(1) In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the facility, the Department may require site rehabilitation to reduce concentrations of petroleum products' contaminants of concern to the levels approved in the SSAs/NFAP or otherwise allowed by Chapter 62-780, F.A.C.

Site Visit Comments

10/25/2016

On site, I met with Mr. Alex Alvarado Assistant Manager from Wal-Mart for an annual compliance inspection of one 650 gallon of capacity, steel, double-wall AST used for waste oil, and three other non-regulated sizes ASTs. The registration contact information was verified and remains current. Facility latitude and longitude will be verified and updated as needed. The following records were current and available on site:
Registration Placard
CFR
Monthly Visual Log
Annual Operability Test
Fuel level is being monitored through a mechanical gauge. Tank and associated piping are in good condition; no visible weathering, cracking or blistering noted. No petroleum staining was noted on the exterior or the concrete pad around the tank.
Fill-port is properly identified. Fill port watertight cap contains gasket and has a tight seal.
Interstitial space is monitored through Pneumercator, currently alarm free.
See pictures attached.

Dear Mr. Yates:

The Miami-Dade County Department of Regulatory and Economic Resources (RER), on behalf of the Florida Department of Environmental Protection (Department), has reviewed the Site Rehabilitation Completion Report/No Further Action Proposal (SRCR/NFAP) dated May 6, 2013 (received May 10, 2013), prepared and submitted by Applied Science and Engineering, LLC for the petroleum product discharge referenced above. Documentation submitted with the SRCR/NFAP confirms that criteria set forth in Subsection 62-780.600(1), Florida Administrative Code (F.A.C.), have been met. Please refer to the attached maps of the source property and analytical summary tables. The SRCR/NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (Order). Therefore, you are released from any further obligation to conduct site rehabilitation at the facility for petroleum product contamination associated with the discharge referenced above, except as set forth below.

(1) In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the facility, the Department may require site rehabilitation to reduce concentrations of petroleum products' contaminants of concern to the levels approved in the SRCR/NFAP or otherwise allowed by Chapter 62-780, F.A.C.
