## 1.0 INTRODUCTION

This Sociocultural Effects Evaluation summarizes the existing conditions in the study area and presents the potential sociocultural impacts from the Preferred Alternative.

### 1.1 PROJECT SUMMARY

The Florida Department of Transportation (FDOT), Florida's Turnpike Enterprise (FTE), is performing a Project Development and Environment (PD&E) Study for State Road 869 (SR 869)/Sawgrass Expressway from west of US 441/SR 7 to Powerline Road (SR 845), a distance of approximately 4 miles (see **Figure 1.1**). The objective of this PD&E Study is to evaluate corridor modifications to improve operations and interchange access. The proposed improvements will address existing and future traffic needs, improve travel time reliability, enhance safety, and provide long-term mobility options along the corridor. The study is evaluating additional lanes, new collector distributor roadway systems and interchange improvements. The study also includes 2.7 miles of the Florida's Turnpike (SR 91) from Wiles Road to the Broward/Palm Beach County Line. The study area is located in Broward County and traverses the cities of Parkland, Coral Springs, Coconut Creek, and Deerfield Beach, as well as an area of unincorporated Broward County.

The Sawgrass Expressway is a tolled 21-mile limited access facility located in northern Broward County. Between west of US 441 and the Florida's Turnpike, the corridor consists primarily of six travel lanes (three in each direction). This segment of the corridor is functionally classified as a Divided Urban Principal Arterial Expressway and has a posted speed limit of 65 miles per hour. Between the Florida's Turnpike and Powerline Road the corridor changes to SW 10<sup>th</sup> Street with primarily six non-tolled travel lanes (three in each direction) and a functional classification of Urban Principal Arterial Other. The posted speed of this section is 45 miles per hour. The access management classification of the corridor is Class 1.

The Florida's Turnpike is also a tolled limited access facility that runs north-south from Interstate 95 to Interstate 75. Between Wiles Road and the County Line, the corridor consists primarily of six travel lanes (three in each direction). This segment of the corridor is functionally classified as a Divided Urban Principal Arterial Expressway and has a posted speed limit of 65 miles per hour. The access management classification of the corridor is Class 1.

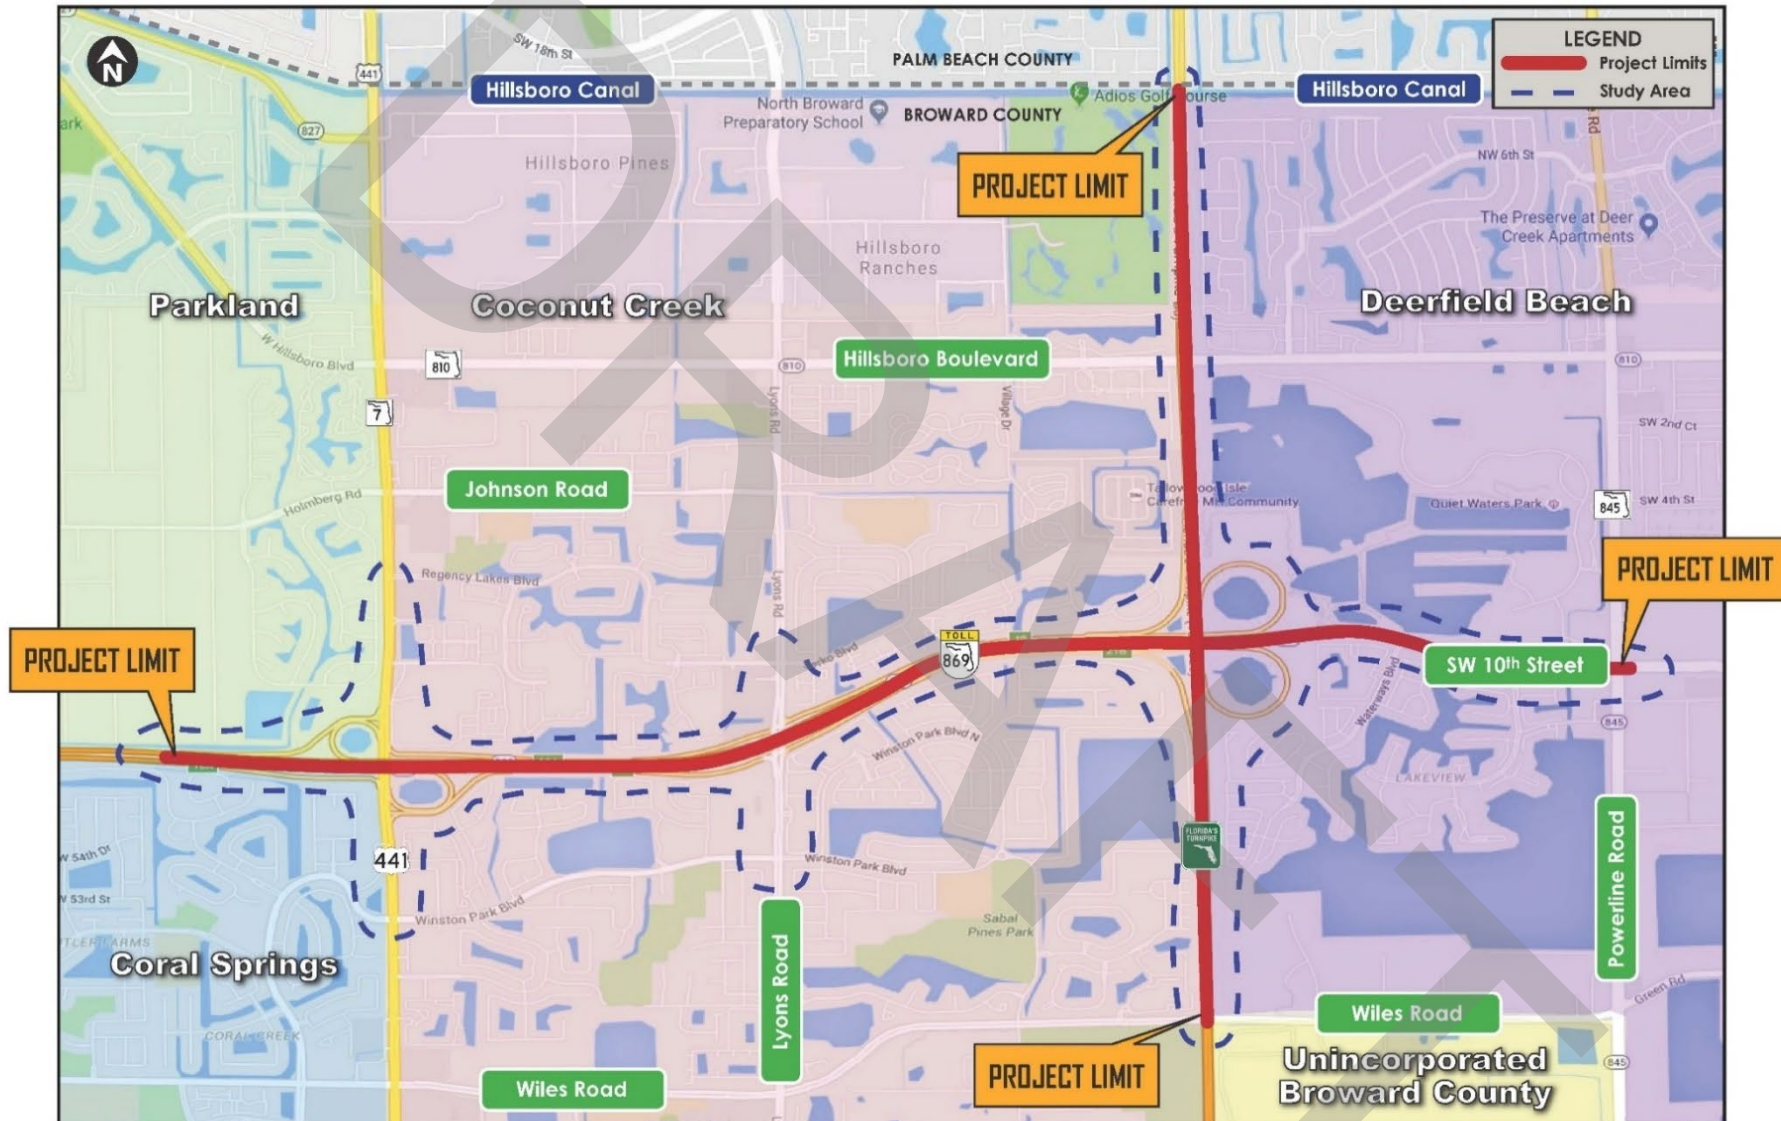

Figure 1.1 – Project Location Map

## 1.2 PURPOSE AND NEED OF THE PROJECT

The primary purpose of this project is to add lanes to meet future transportation demand, improve travel time reliability and provide long-term mobility options. The project also includes operational and safety enhancements to the US 441, Lyons Road, and Florida's Turnpike interchanges.

The need for the project is based on the following factors:

**Capacity** – A *Systems Interchange Modification Report* dated January 2024 was prepared by FTE for this PD&E Study. The existing 2016 and future 2045 Annual Average Daily Traffic (AADT) volumes are listed in **Table 1.1** and **Table 1.2**.

In 2016, the Sawgrass Expressway carried an AADT volume of 86,200 vehicles west of US 441 and 81,700 vehicles between US 441 and Lyons Road. The segment between Lyons Road and Florida's Turnpike carried 81,700 vehicles and the segment east of Florida's Turnpike up to Powerline Road carried 37,700 vehicles.

The 2045 AADT forecast estimate is 131,100 vehicles west of US 441 and 128,900 vehicles between US 441 and Lyons Road. The segment between Lyons Road and Florida's Turnpike is estimated to carry 138,900 vehicles and the segment east of Florida's Turnpike up to Powerline Road is estimated at 71,900 vehicles. The 2045 AADT volumes represent a 52-91% increase in traffic from the year 2016 to 2045.

**Table 1.1 – Sawgrass Expressway Annual Average Daily Traffic (AADT) Volumes**

Roadway	Segment	2016 AADT	2045 AADT	% Increase
Sawgrass Expressway	West of US 441	86,200	131,100	52%
	US 441 and Lyons Road	81,700	128,900	58%
	Lyons Road and Florida's Turnpike	81,700	138,900	70%
SW 10 <sup>th</sup> Street	Florida's Turnpike and Powerline Road	37,700	71,900	91%

**Source:** Systems Interchange Modification Report – January 2024

According to the *Systems Interchange Modification Report*, additional lanes are needed along the Sawgrass Expressway corridor by the year 2025. West of US 441, one additional lane is needed by the year 2025 and two additional lanes are needed by the year 2033. Between US 441 and Lyons Road, one additional lane is needed by the year 2025 and two lanes by 2028. Between Lyons Road and Florida's Turnpike, one additional lane is needed by the year 2025 and two

additional lanes are needed by the year 2028. Between Florida's Turnpike and Powerline Road, one additional lane is needed by the year 2025.

**Table 1.2 – Florida's Turnpike Annual Average Daily Traffic (AADT) Volume**

Roadway	Segment	2016 AADT	2045 AADT	% Increase
Florida's Turnpike	Glades Road and Sawgrass Expressway	106,800	153,100	43%
	Sawgrass Expressway and Sample Road	90,800	130,300	44%

Source: Systems Interchange Modification Report – January 2024

According to the *Systems Interchange Modification Report*, additional lanes are needed along the Florida's Turnpike corridor by the year 2025. South of the Sawgrass Expressway, one additional lane is needed by the year 2026, and north of the Sawgrass Expressway, one additional lane is needed by the year 2025 and two additional lanes by 2045.

Several interchanges and adjacent intersections are operating at an unacceptable level of service. If additional lanes are not added to the corridor, the congestion within the project limits will get considerably worse with longer peak periods, more crashes and deteriorating travel time reliability.

**Travel Time Reliability** – In urban areas, many motorists have accepted traffic congestion as an unpleasant fact and have adjusted their schedules or allowed extra time for work, school, and other time-sensitive trips. However, they are less tolerant of unexpected delays that cause them to be late for work or important meetings, miss appointments, or lose money due to disruption of shipping and just-in-time deliveries.

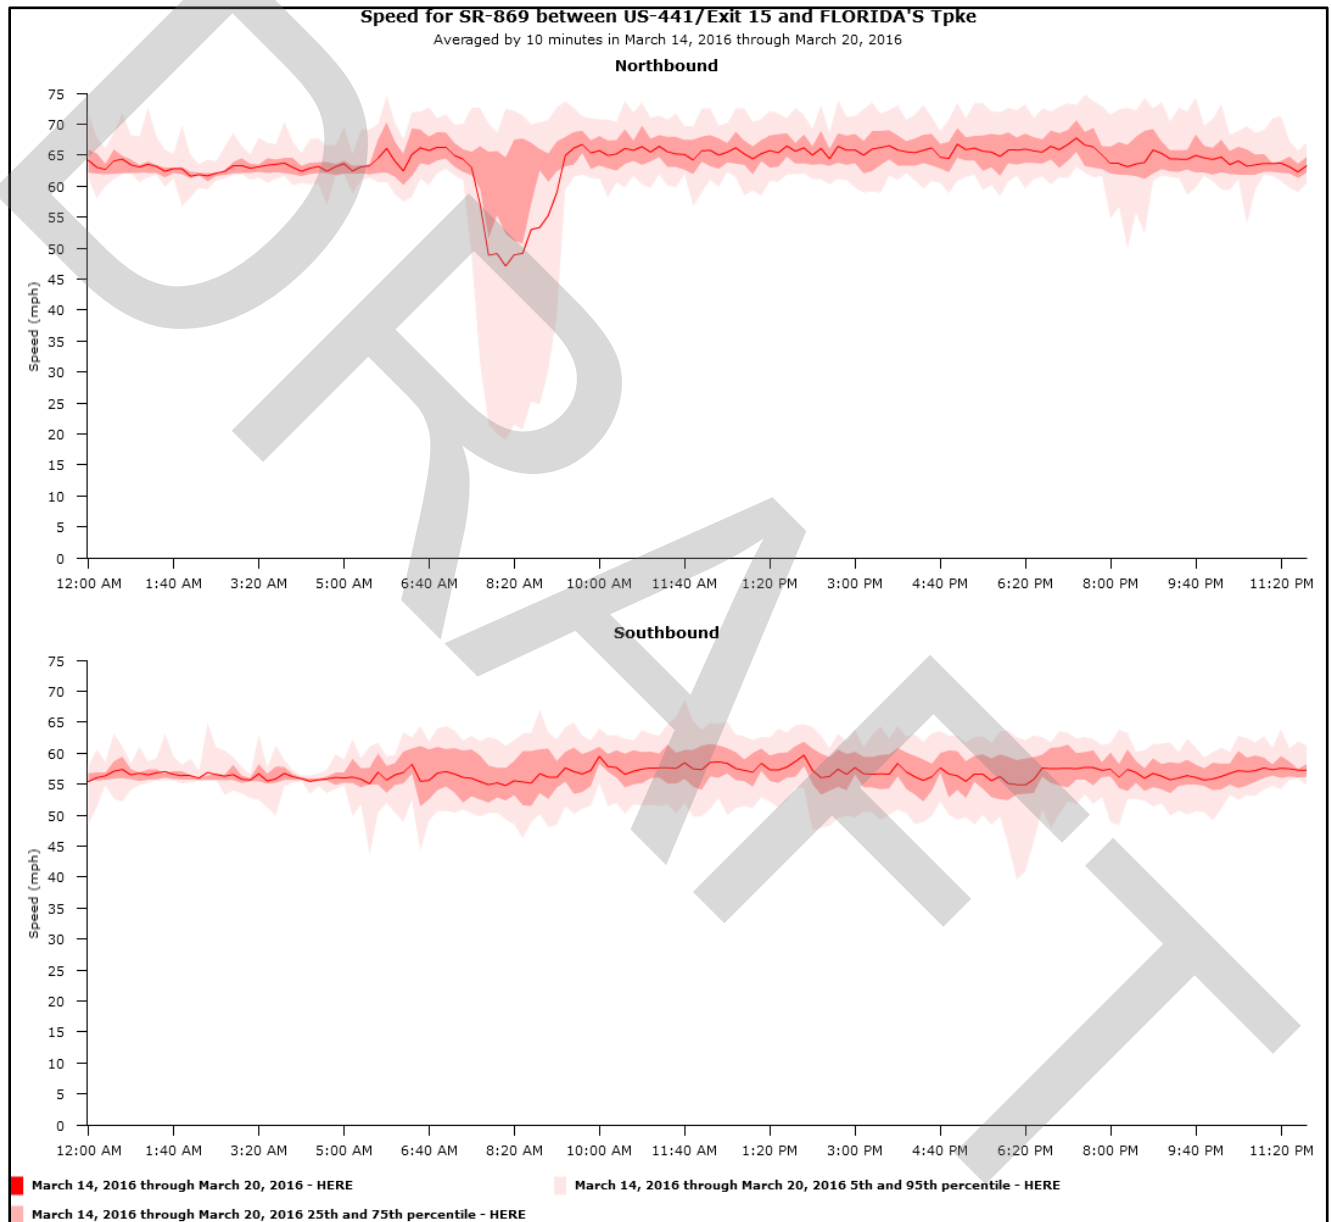

Travel time reliability measures the extent of this unexpected delay. Travel time reliability is defined as the consistency or dependability in travel times, as measured from day-to-day and/or across different times of the day.

To gauge travel reliability on the Sawgrass Expressway, the average travel speeds between US 441 and Florida's Turnpike were obtained for a 7-day period (March 14, 2016 through March 20, 2016) and plotted. The results are shown in **Figure 1.2**. As shown on the figure, the average travel speeds in the northbound/eastbound direction are dropping below 50 miles per hour during the morning peak with 95th percentile dropping to below 20 miles per hour.

Traffic volumes along the Sawgrass Expressway are expected to increase by 52% to 91% in the next 25 years. Without any improvements, the increasing traffic congestion will further deteriorate travel reliability along the corridor. Residents and workers will avoid destinations along the Sawgrass Expressway negatively affecting the economic vitality of the area.

**Figure 1.2 - Sawgrass Expressway Travel Time Reliability**

**System Linkage** – Continuity in the transportation system is essential for efficient vehicle movements, travel patterns and safety. The Sawgrass Expressway is part of the State's Strategic Intermodal System (SIS) and the National Highway System (NHS) providing connectivity to Interstate 595, Interstate 75, Florida's Turnpike, and Interstate 95. The corridor also connects the local multi-modal transportation network by providing access to the Sunrise Park and Ride at the Amerant Bank Arena (formerly known as BB&T Center) and linking the existing Express Bus service along I-595 to Downtown Fort Lauderdale and Downtown Miami.

Additional lanes are proposed on the Sawgrass Expressway from south of Sunrise Boulevard to west of US 441 and on Florida's Turnpike both north and south of the Sawgrass Expressway. The segment corridor from US 441 to Florida's Turnpike is the last segment missing the needed additional lanes to continue to provide a reliable system linkage with the Florida's Turnpike and to the east.

**Modal Interrelationships** – The Sawgrass Expressway is part of the SIS and NHS networks. Additional lanes along the corridor will enhance the mobility of goods by alleviating current and future congestion along the corridor and surrounding freight and transit networks.

**Transportation Demand** – The continued growth within Broward County, particularly by the number of Developments of Regional Impact that have been approved in western Broward County, will drive the need for further infrastructure improvements including the widening of the Sawgrass Expressway. The existing 2016 AADT volumes measured along the corridor range from 37,700 between Florida's Turnpike and Powerline Road to as high as 86,200 west of US 441. The 2045 AADT forecasts show this traffic will grow to 71,900 between Florida's Turnpike and Powerline Road and to as high as 131,100 between US 441 and Lyons Road. This increase in demand reflects a 52% to 91% increase in future traffic necessitating capacity and operational improvement strategies to address this need.

**Social Demands and Economic Development** – The Sawgrass Expressway connects the cities of Coral Springs, City of Parkland, Coconut Creek, and Deerfield Beach to the Florida's Turnpike. Travel demand on the Sawgrass Expressway is directly related to population and employment changes within Broward County and the cities within the corridor. The projected population of Broward County and cities adjacent to the Sawgrass Expressway is shown in **Table**

**1.3.**

**Table 1.3 – 2020 and 2045 Population**

Year	Broward County	City of Coral Springs	City of Parkland	City of Coconut Creek	Deerfield Beach
2020 <sup>1</sup>	1,944,375	134,394	34,670	57,833	86,859
2045 <sup>2</sup>	2,237,840	142,885	32,848	64,885	93,188
2020-2045 Change	15%	6%	-5%	12%	7%

**Source:** <sup>1</sup> – United States Census 2020, <sup>2</sup> – Broward MPO 2045 Long Range Transportation Plan & Broward County and Municipal Population Forecast and Allocation Model 2017

The population of Broward County is expected to increase by 15% from 2020 to 2045 while the cities directly adjacent to the Sawgrass Expressway are projected to grow between 6% and 12%, except for the City of Parkland. This projected increase in population will result in increased traffic on Sawgrass Expressway and adjacent roadway network.

**Emergency Evacuation** – Sawgrass Expressway serves as part of the emergency evacuation route network designated by the Florida Division of Emergency Management and by Broward County. This corridor is critical in facilitating traffic movement during emergency evacuation periods as it connects to other major arterials and highways of the state evacuation route network (i.e., I-595, I-75, Florida's Turnpike and to I-95 via the arterial portion of SR 869 known as SW 10<sup>th</sup> Street to the east). Increasing the capacity of the Sawgrass Expressway will reduce evacuation times needed for residents of Broward County during emergency and hurricane evacuations.

**Long Term Mobility Option** – Sawgrass Expressway, within the project limits, is currently operating at LOS D or better with several intersections operating at LOS F. The 2045 traffic forecasts, based on population and employment projections, show an increase of 43% to 91% in future traffic volumes. A long-term mobility option is needed that will not only serve current traffic volumes but will accommodate future projected growth. Without this option, the residents and workers in the surrounding area will face severe congestion leading to decreasing productivity that would affect the economic viability of cities surrounding the Sawgrass Expressway.

## 2.0 CONCEPTUAL ALTERNATIVES

The objective of this PD&E Study is to evaluate corridor modifications to improve operations and interchange access. To keep up with the growing traffic demand within the study area, multiple conceptual alternatives were considered during the initial phase of the study, including a No-Build Alternative. The No-Build Alternative maintains the existing roadway configuration and any other planned improvements along the corridor.

All conceptual alternatives were screened based on travel demand, capacity, tolling, signing, access, geometrics, and right of way availability in order to select a preferred alternative. The alternatives analysis process consisted of six steps throughout the study (see **Figure 2.1**).

The first step of the process was to divide the study area based on roadway characteristics. Once divided, the second step was to develop options with improvements that will meet the needs of the divided areas. The improvements varied by area including, but not limited to, adding express lanes, combining off-ramp exits, adding lanes to the on- and off-ramps, new interchange ramp connections, interchange modifications, and extending the existing collector distributor roadway systems. During the third step, selected improvement options were combined by area and developed corridor concepts that covered the entire study area. These corridor improvements included the implementation of express lanes along both the Sawgrass Expressway and Florida's Turnpike.

In 2020, FTE no longer considered adding express lanes to both Sawgrass Expressway and Florida's Turnpike. Policy changes at the time allowed for FDOT and FTE to look at other freeway widening alternatives. Therefore, during step four, a series of new corridor concepts were developed with additional travel lanes, interchange modifications and other corridor improvements. During this step a corridor concept was selected to be evaluated further during the alternatives analysis. During step five, from the corridor concept selected, two PD&E build alternatives were developed, analyzed, and presented to the local agencies, stakeholders, and public during an Alternatives Public Information Meeting. During step six, FTE addressed all the comments from the public meeting and identified a preferred alternative.

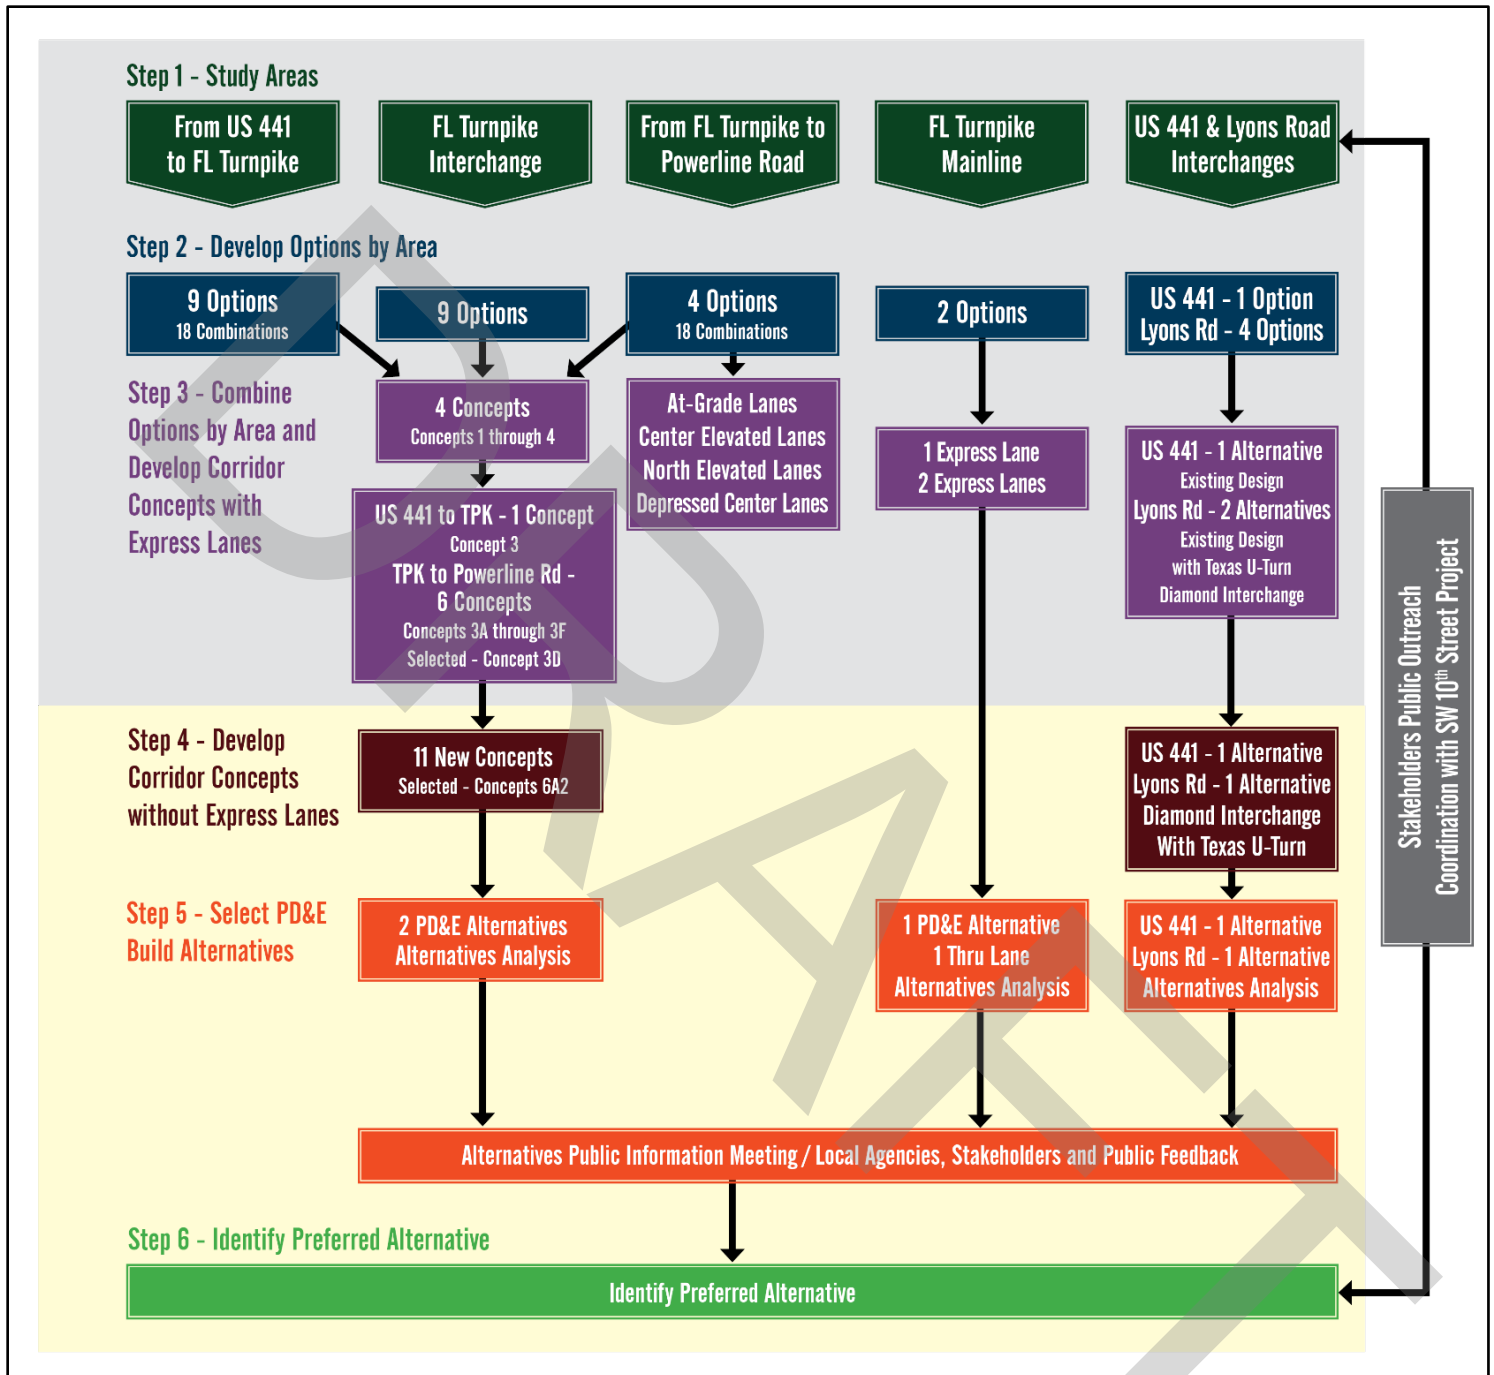

Figure 2.1 - Alternative Analysis Process

## 2.1 PREFERRED ALTERNATIVE

**Sawgrass Expressway** – The preferred alternative proposes to widen the Sawgrass Expressway to four travel lanes in each direction with auxiliary lanes at select locations. The preferred alternative also includes collector distributor roadway systems on both sides of the corridor. The collector distributor roadway systems will separate local traffic and interchange traffic from the mainline traffic. Separating traffic patterns reduces lane changes, weaving maneuvers, speed differentials and friction along the corridor. The collector distributor roadway systems will be barrier separated from the Sawgrass Expressway mainline lanes.

Sawgrass Expressway, west of US 441, will consist of 12-foot wide travel lanes and auxiliary lanes with 15-foot wide inside shoulders, 12-foot wide outside shoulders and a 2-foot wide median barrier wall (see [Figure 2.2](#)). This section is consistent with the proposed Sawgrass Expressway widening project to the west between Atlantic Boulevard and west of US 441 (FPID# 435461-1). Between US 441 and Lyons Road, the roadway section will consist of 12-foot wide travel lanes and auxiliary lanes with 15-foot wide inside shoulders, 12-foot wide outside shoulders and a 2-foot wide median barrier wall. The collector distributor roadway systems begin at US 441 and end at the Florida's Turnpike. Between US 441 and Lyons Road, the collector distributor roadway system will consist of two 12-foot wide travel lanes with varying inside and outside shoulders widths between 8-12 feet wide separated from the mainlines lanes with a 2-foot wide barrier wall (see [Figure 2.3](#)).

Between Lyons Road and Florida's Turnpike, the roadway section will consist of 12-foot wide travel lanes and auxiliary lanes with varying inside and outside shoulders widths between 12-14 feet wide and a 2-foot wide median barrier wall. The collector distributor roadway system will consist of two 12-foot wide travel lanes and one auxiliary lane with varying inside and outside shoulders widths between 8-12 feet wide separated from the mainlines lanes with a 2-foot wide barrier wall (see [Figure 2.4](#)).

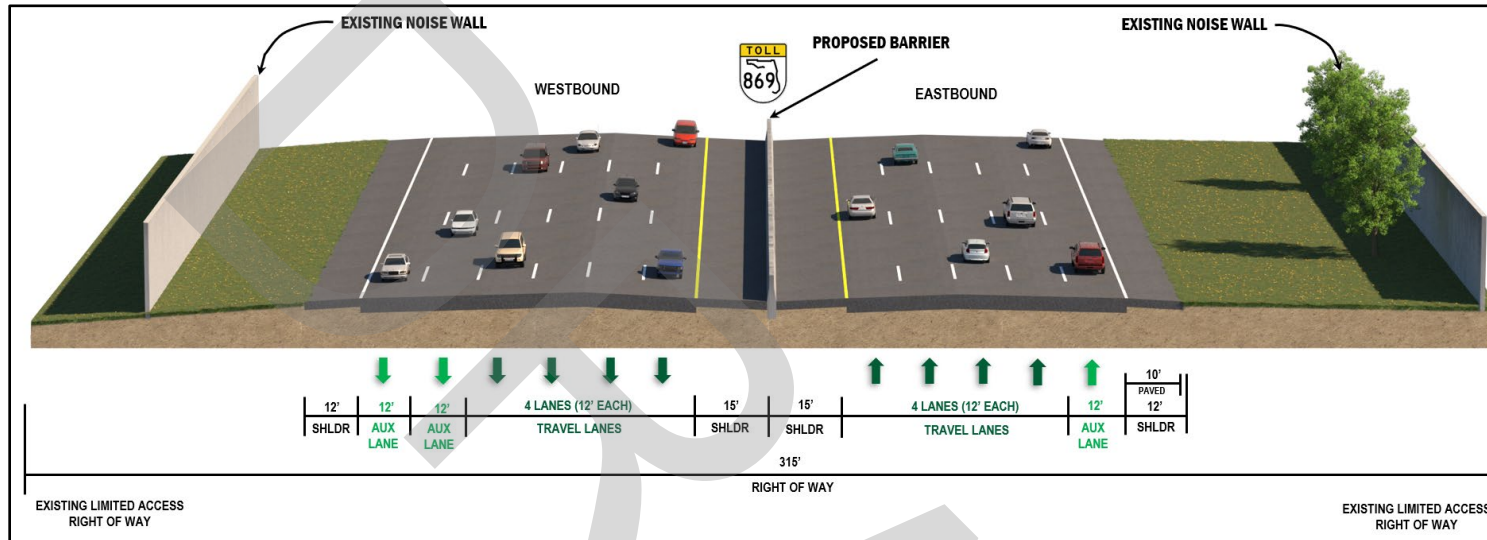

Figure 2.2 – Preferred Alternative Roadway Section West of US 441

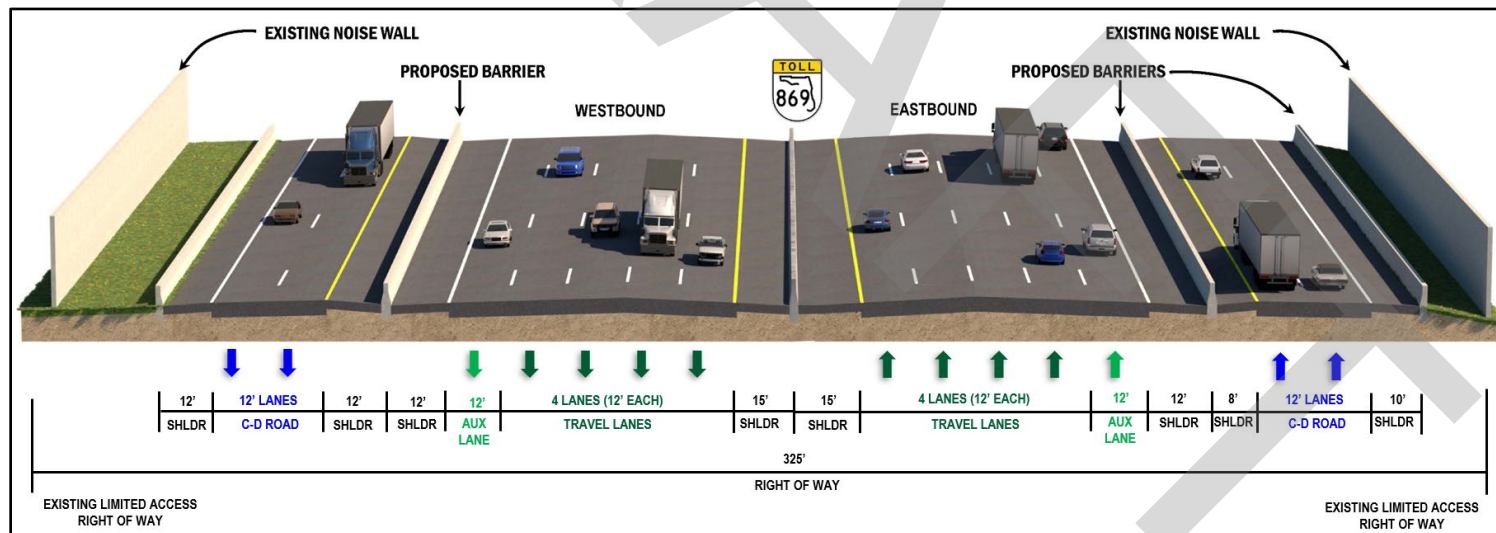

Figure 2.3 – Preferred Alternative Roadway Section between US 441 and Lyons Road

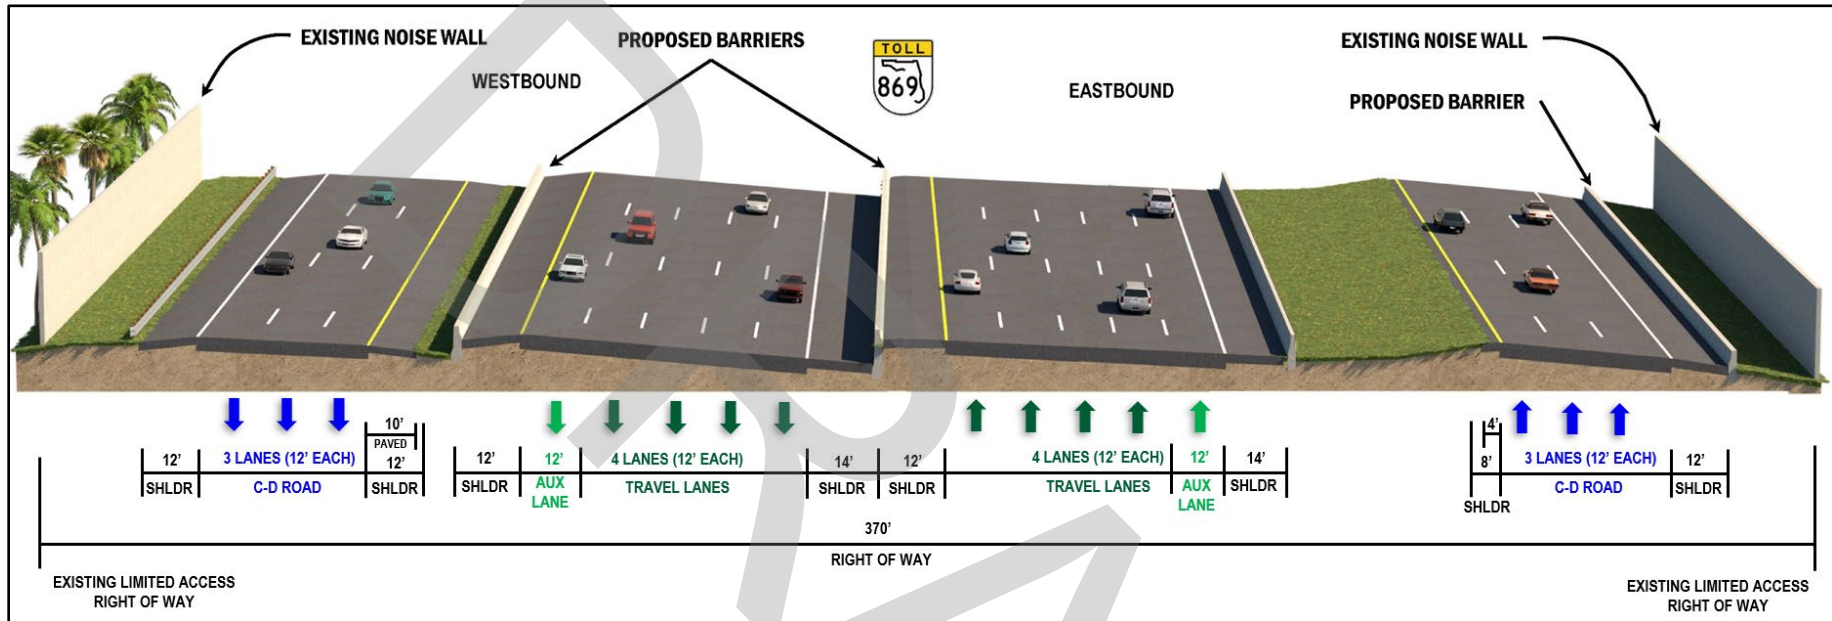

Figure 2.4 – Preferred Alternative Roadway Section between Lyons Road and Florida's Turnpike

**SW 10<sup>th</sup> Street** – SW 10<sup>th</sup> Street, between Florida's Turnpike and Powerline Road, will consist of two separate roadway corridors: 1) SW 10<sup>th</sup> Street and 2) SW 10<sup>th</sup> Street Connector. This roadway section overlaps with the SW 10<sup>th</sup> Street project currently underway by FDOT District Four (FPID# 439891-1). This project is proposing to add two limited access connector lanes in each direction on the north side of the existing SW 10<sup>th</sup> Street corridor between Florida's Turnpike and I-95. The FDOT project is also proposing other corridor improvements along the SW 10<sup>th</sup> Street existing corridor (see **Figure 2.5**). Some of the major improvements within this roadway section between Florida's Turnpike and Powerline Road are listed below:

- Realign the existing SW 10<sup>th</sup> Street corridor to the south to leave space on the north side for the new connector lanes. The new south corridor alignment will consist of 11-foot wide travel lanes, auxiliary lanes and turn lanes. The corridor will also have a raised center median and a shared-use path along the south side of the roadway.
- The connector lanes will begin and end at the Sawgrass Expressway within the Florida's Turnpike Interchange and will be grade separated over Powerline Road.
- A new SW 10<sup>th</sup> Street westbound bridge structure will be constructed just east of the Florida's Turnpike to allow the new connector lanes to cross under from the north side to the inside to merge with the Sawgrass Expressway to the west.
- Intersection improvements at Waterways Boulevard, Independence Drive and Powerline Road.

All the improvements listed above are expected to be constructed and opened to traffic before the implementation of the Sawgrass Expressway project. The Sawgrass Expressway widening project will tie to the FDOT SW 10<sup>th</sup> Street project east of the Florida's Turnpike.

**Florida's Turnpike** – The preferred alternative proposes to widen the Florida's Turnpike between Wiles Road and the County Line to four travel lanes and one thru lane in each direction for a total of ten lanes, with auxiliary lanes at select locations (see **Figure 2.6** and **Figure 2.7**). Thru lanes are additional travel lanes that help provide congestion relief in high traffic areas. These lanes offer customers making longer, more regional trips, the ability to bypass the local traffic entering and exiting the road. Customers pay the same amount to use the thru lanes as they do in any other lane on the toll road. All mainline lanes and shoulders are 12-foot wide, with a 2-foot wide median barrier wall.

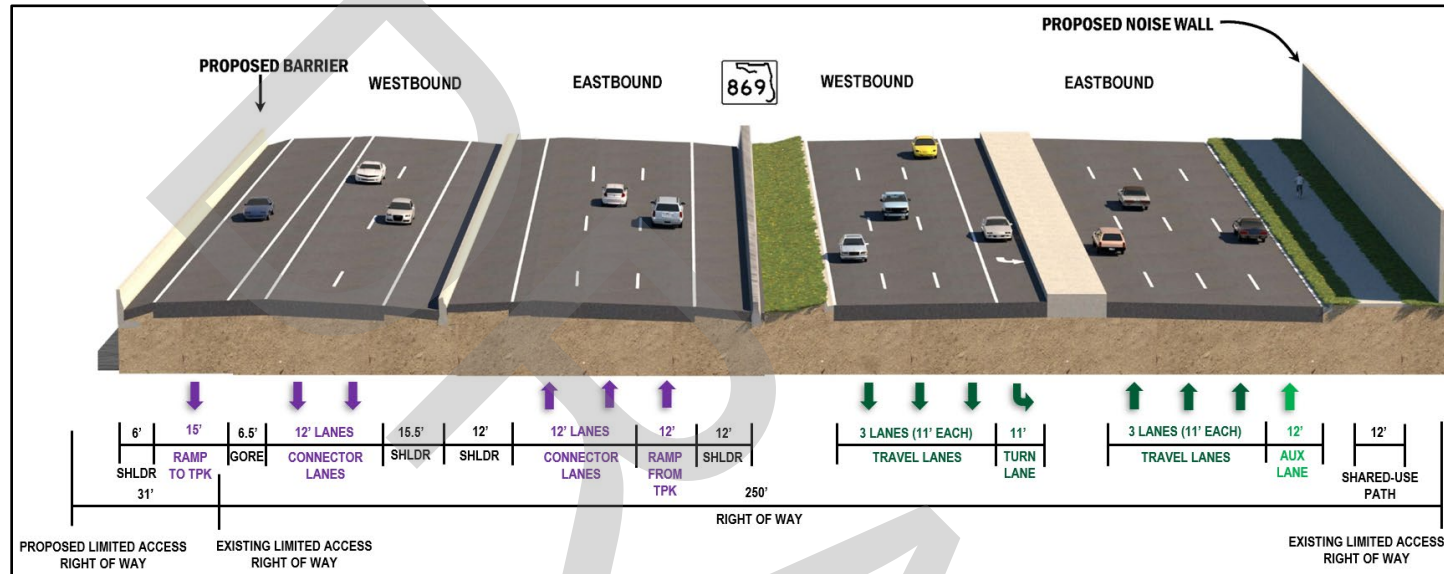

Figure 2.5 – Preferred Alternative Roadway Section between Florida's Turnpike and Powerline Road

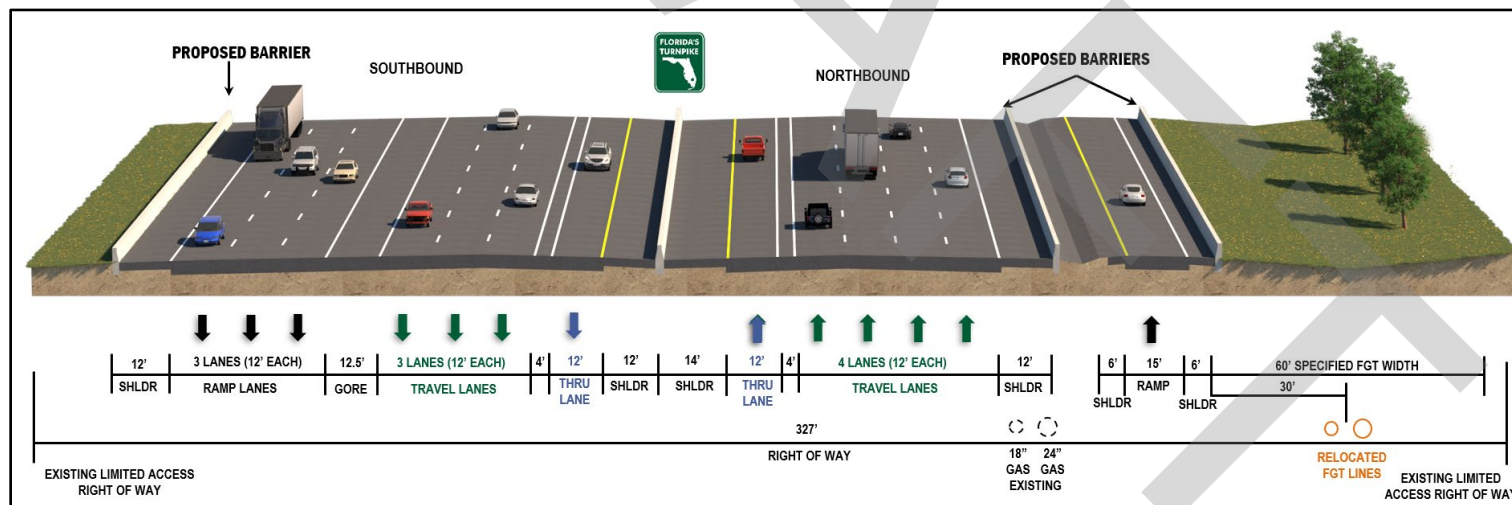

Figure 2.6 – Preferred Alternative Roadway Section between Wiles Road and Sawgrass Expressway

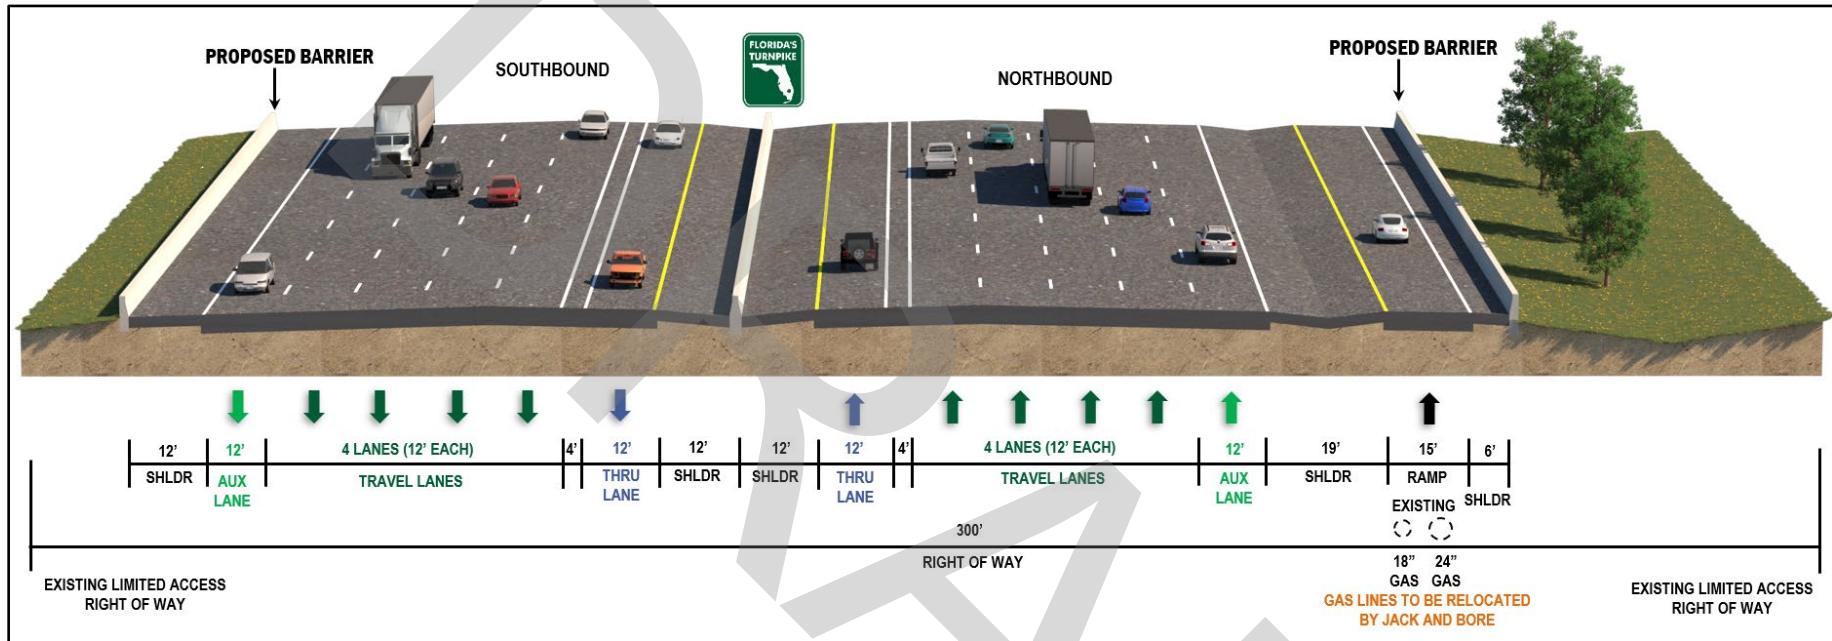

Figure 2.7 – Preferred Alternative Roadway Section between Sawgrass Expressway and the County Line

**US 441** – The preferred alternative is proposing one new bridge structure over US 441 for the westbound collector distributor roadway system. The preferred alternative is also proposing intersection improvements at the adjacent signalized intersections, Winston Park Boulevard to the south and Regency Lakes Boulevard to the north. At Winston Park Boulevard, the recommendation is to add a second left-turn lane eastbound and westbound. At Regency Lakes Boulevard, the recommendation is to add a second left-turn lane southbound.

**Lyons Road** – The preferred alternative is proposing two new bridge structures over Lyons Road for the eastbound and westbound collector distributor roadway systems. Another improvement at Lyons Road is the reconfiguration of the Sawgrass Expressway Interchange to a diamond interchange plus additional turn lanes at the ramp terminals. The preferred alternative is also proposing intersection improvements at the adjacent signalized intersections, Winston Park Boulevard to the south and Serko Boulevard to the north. At Winston Park Boulevard, the recommendation is to add a second left-turn lane southbound and northbound and a through-left-shared lane eastbound and westbound. At Serko Boulevard, the recommendation is to add a second left-turn lane southbound, northbound, eastbound, and westbound. The project also proposes to extend the existing bike lanes north to the Serko Boulevard intersection. This improvement will provide full multimodal connectivity under the Sawgrass Expressway and a safer route for bicyclists, enhancing the mobility within the corridor.

**Florida's Turnpike Interchange** – The preferred alternative widens and improves the existing ramps. Some of these improvements include:

- Eliminating the northbound weaving section between the two loop ramps.
- Eastbound to northbound loop ramp widening to two lanes.
- Adding a southbound to westbound direct connection to the Sawgrass Expressway westbound lanes.
- Northbound to westbound loop ramp widening to two lanes.
- Eastbound to southbound ramp widening to two lanes.

The preferred alternative also adds the missing direct connection ramps between SW 10<sup>th</sup> Street and Florida's Turnpike. The proposed new direct connections are:

- Florida's Turnpike southbound to SW 10<sup>th</sup> Street eastbound

- Florida's Turnpike southbound to SW 10<sup>th</sup> Street Connector eastbound
- SW 10<sup>th</sup> Street westbound to Florida's Turnpike southbound
- SW 10<sup>th</sup> Street Connector westbound to Florida's Turnpike southbound
- SW 10<sup>th</sup> Street westbound to Florida's Turnpike northbound
- SW 10<sup>th</sup> Street Connector westbound to Florida's Turnpike northbound
- Florida's Turnpike northbound to SW 10<sup>th</sup> Street eastbound
- Florida's Turnpike northbound to SW 10<sup>th</sup> Street Connector eastbound

**Figure 2.8** shows a schematic line diagram of the preferred alternative.

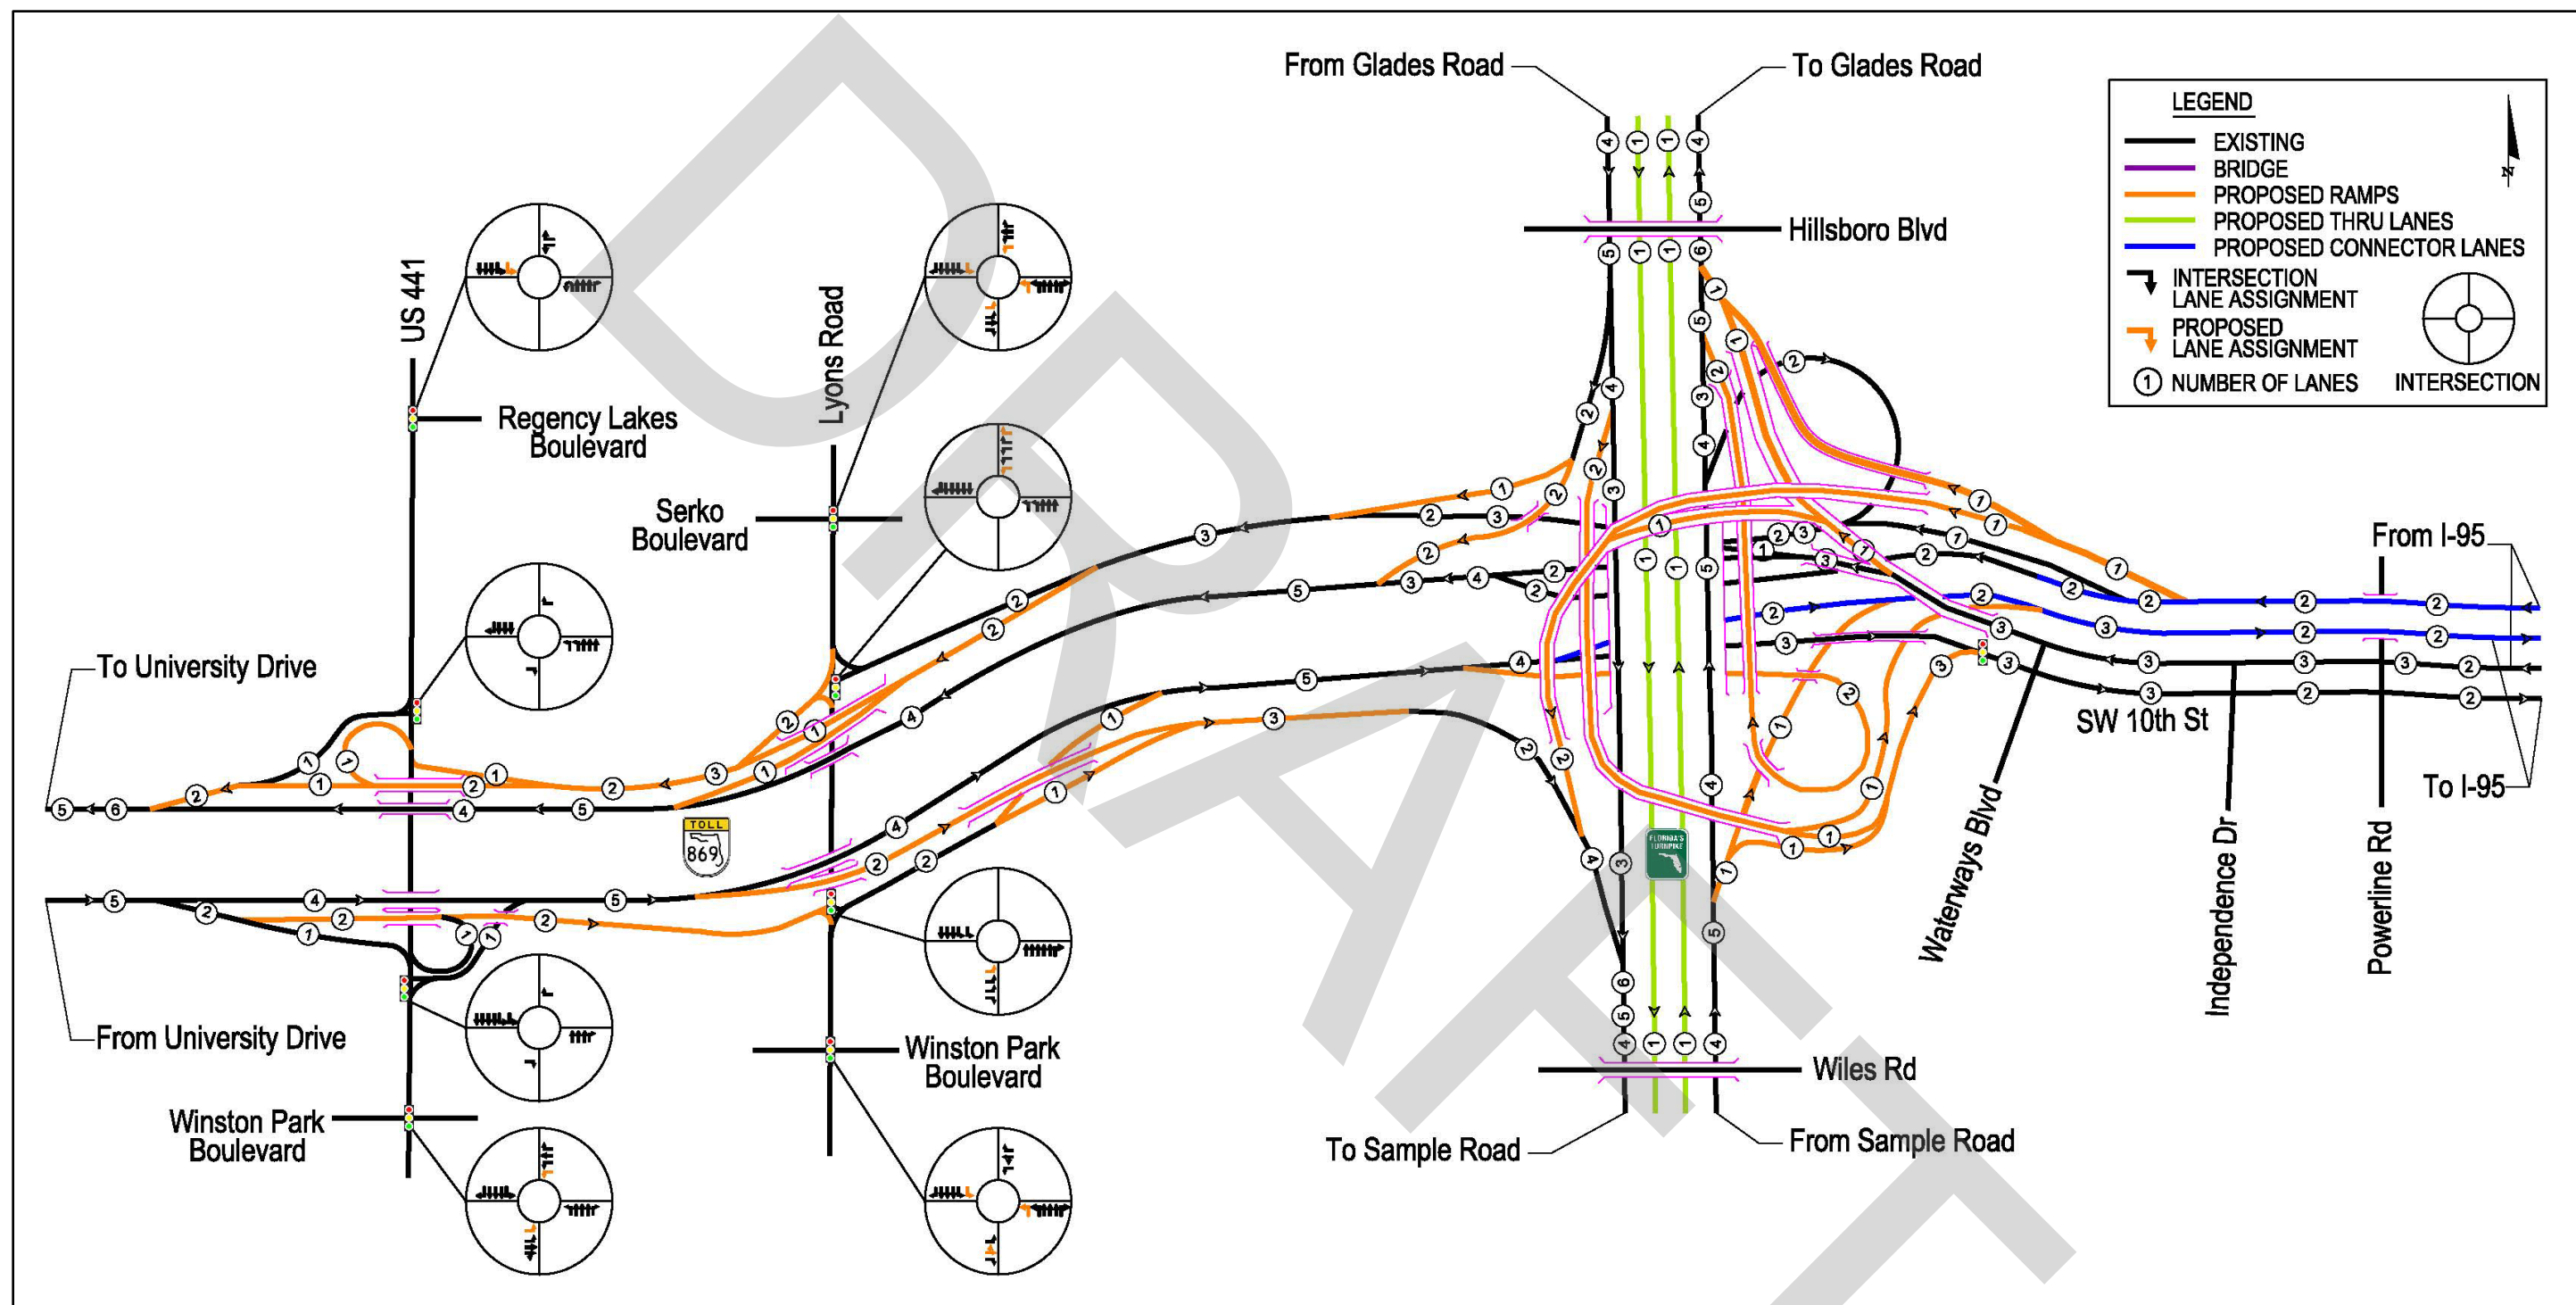

Figure 2.8 – Preferred Alternative Schematic Line Diagram

## 3.0 COMMUNITY CHARACTERISTICS SUMMARY AND MAP

### 3.1 COMMUNITY CHARACTERISTICS

This Sociocultural Effects Evaluation utilized a Community Characteristic Inventory to summarize the existing socio-cultural conditions in the study area. The Community Characteristic Inventory incorporates social, economic, land use change, mobility, and aesthetics conditions in the study area. Those existing conditions are discussed in this section and potential effects are presented in **Section 4.0**.

The Community Characteristic Inventory helps describe the communities and identify any special populations. A map of communities and resources is provided as **Figure 3.1**. The term "project area" is used in this document to represent a smaller area that encompasses the existing Sawgrass Expressway right-of-way and any additional right-of-way to form the footprint of the Preferred Alternative. The term "study area" is defined as a larger geographic area that extends ¼ mile from the project area and is shown in **Figure 3.2**. Geographic Information System (GIS) analysis results, the Environmental Screening Tool, and available regional documentation were reviewed for each jurisdiction in the study area.

The project is located in Broward County and crosses multiple municipalities, including the City of Parkland, City of Coral Springs, City of Coconut Creek, and the City of Deerfield Beach. The project limits extend north to the Broward/ Palm Beach County Line and therefore the study area includes portions of Palm Beach County within the buffer.

**SOCIAL** - It is the policy of the FDOT, under Title VI of the Civil Rights Act of 1964; Section 504 of the Rehabilitation Act of 1973; Age Discrimination Act of 1975; Section 324 of the Federal-Aid Highway Act of 1973; Civil Rights Restoration Act of 1987; and related statutes and regulations, that no person in the United States shall, on the basis of race, color, national origin, sex, age, disability/handicap, or income status, be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination or retaliation under any federally or non-federally funded program or activity administered by the Department or its sub-recipients.

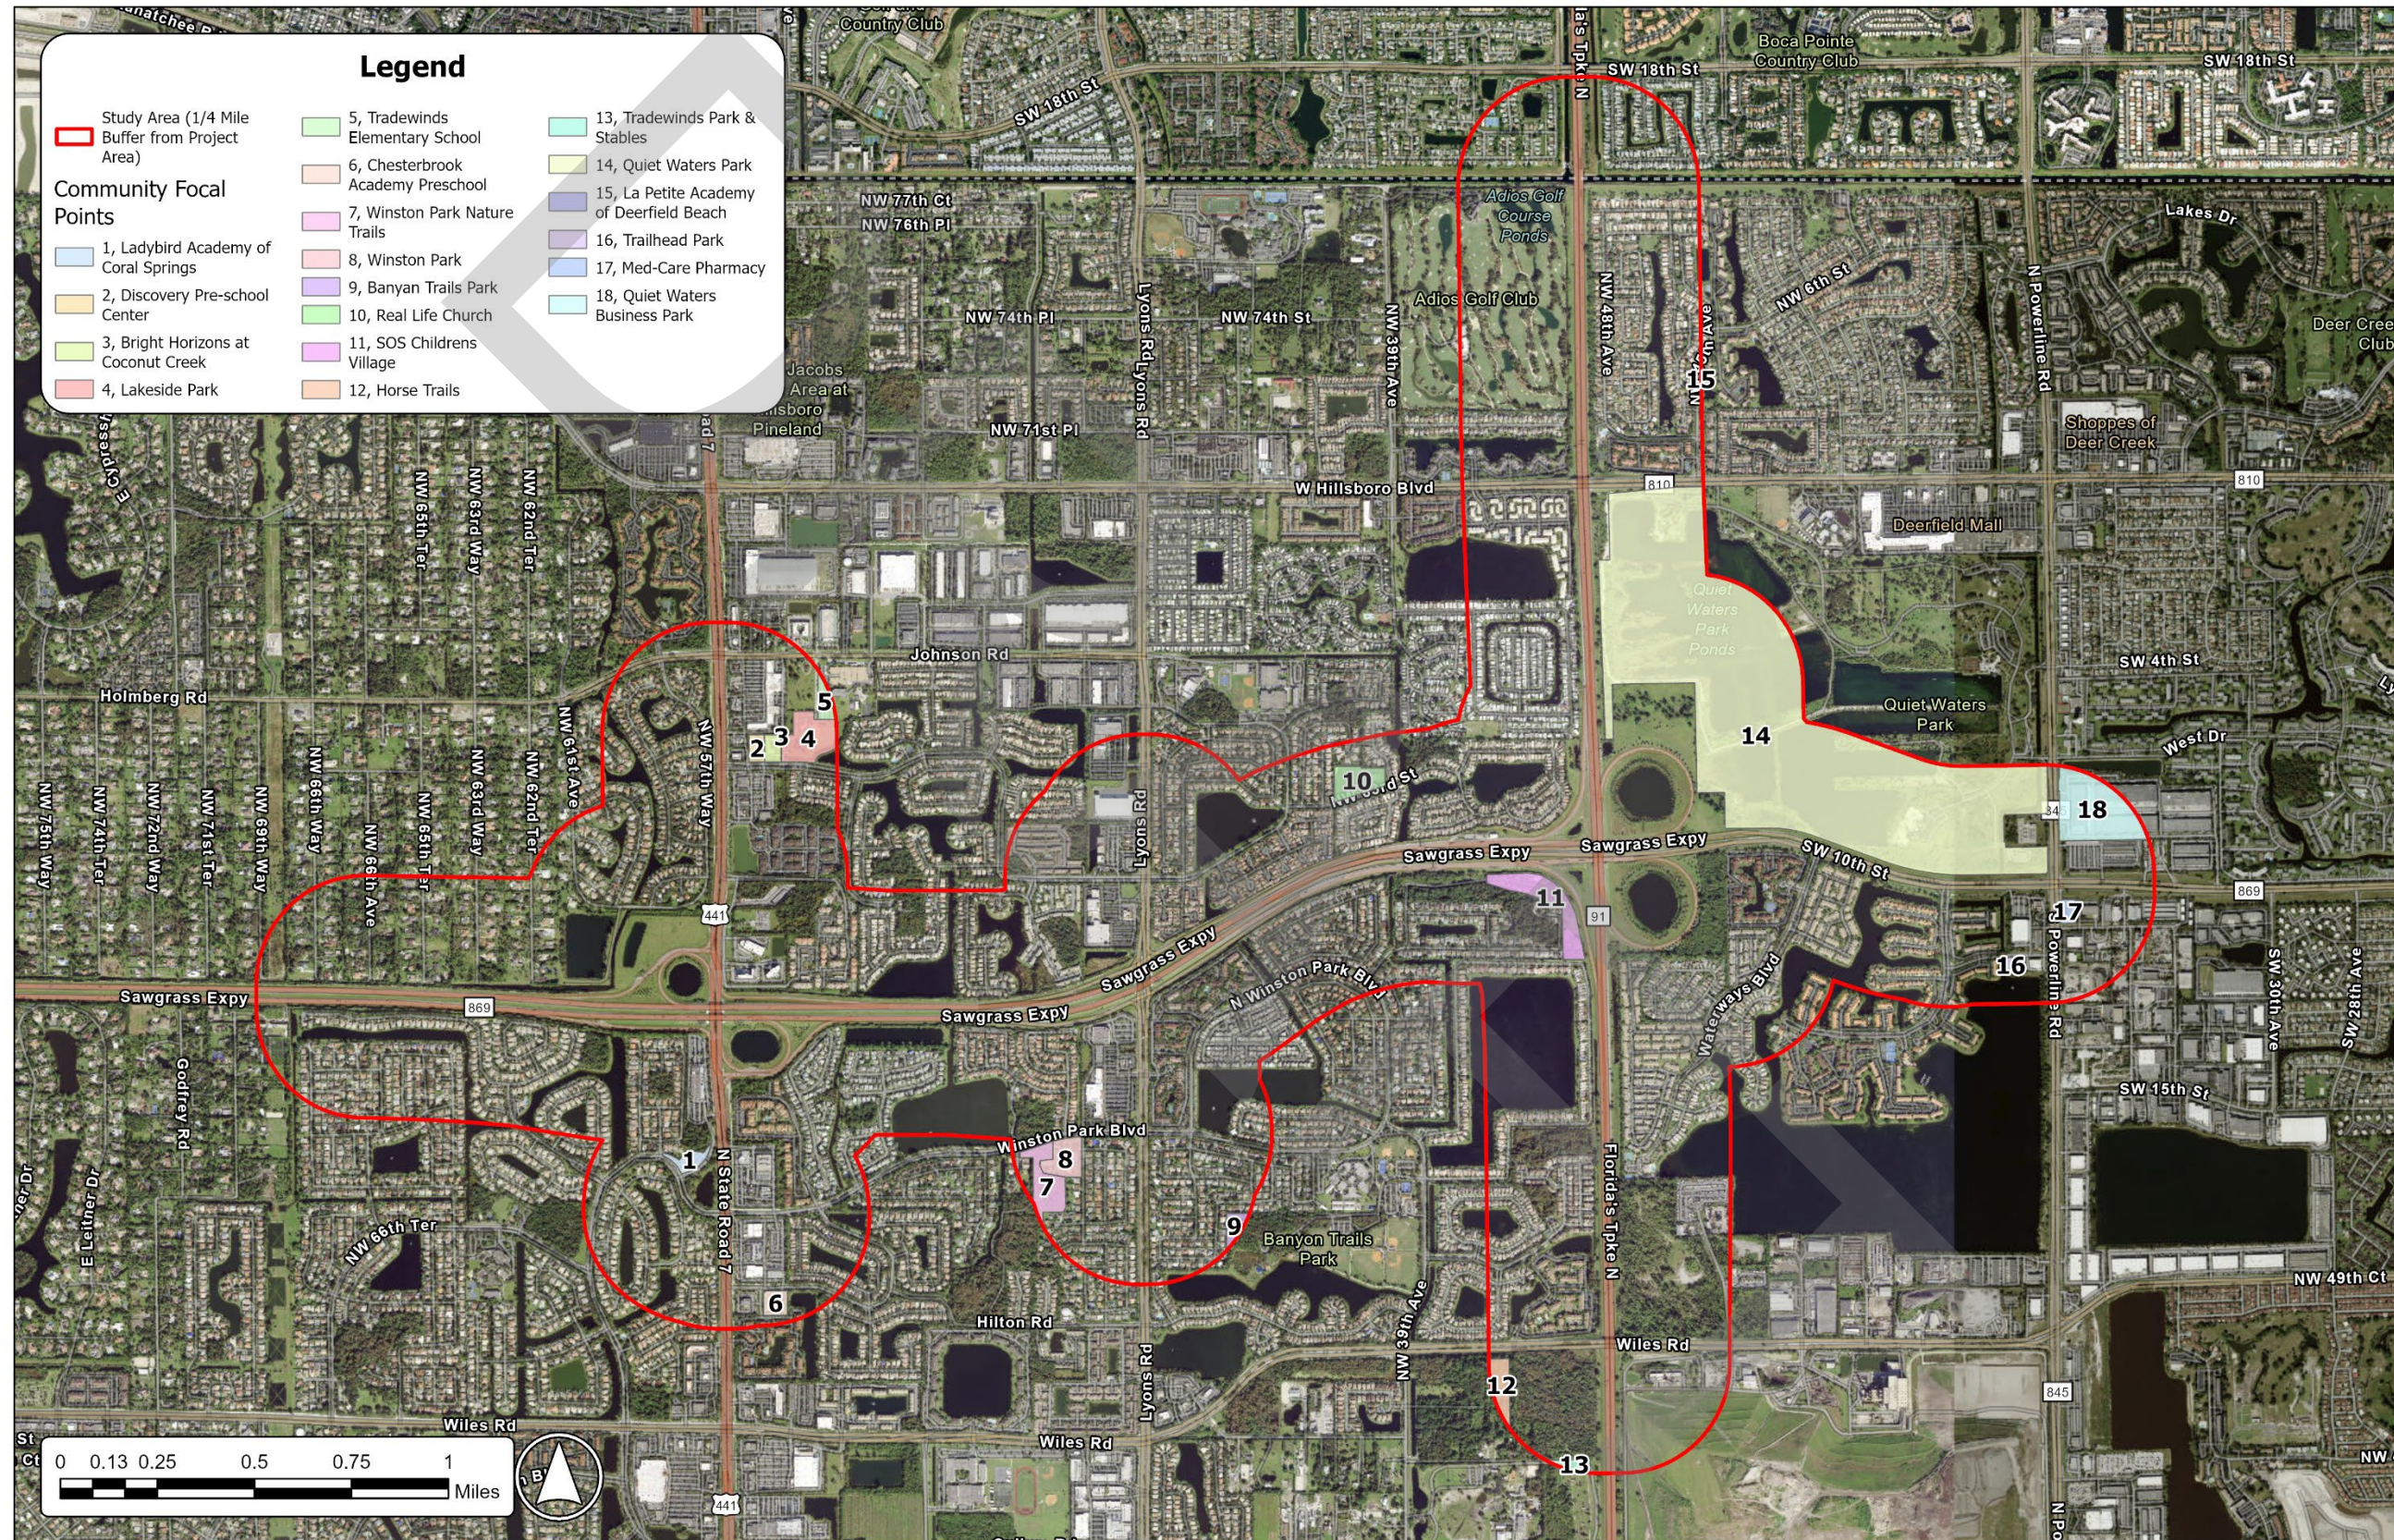

Figure 3.1 - Community Characteristics Inventory

To better understand the study area and the locations of these special populations, a review of the Broward County Census information was completed. The following is a summary of the Census data. This data was obtained from the U.S. Census Bureau (2020 and 2021 Census in Florida, with selected fields from the 2021 American Community Survey) and consists of current updates to the Census data and includes Race, Ethnicity, Limited English Proficiency, Age, and Income.

**POPULATION AND INCOME** - Broward County has a total population of 1,918,092 and Palm Beach County is 1,460,990. The Census Block Groups that intersect the ¼ mile buffer area around the study corridor have a total population of 60,127 with 21,346 households and are shown in **Figure 3.2**.

In both Broward County and Palm Beach County, the percent population below the poverty level is below the Florida average (13.1%) at 12.3% and 11.6%, respectively. As seen in **Table 3.1** there are four Census Block Groups within the study area that have higher than the relevant county average of residents living below the poverty line in the last 12 months (highlighted in gray).

**Table 3.1 - Study Area Census Blocks and Poverty Level**

County	Block Groups	Tract	% Pop. Below Poverty Level	County	Block Groups	Tract	% Pop. Below Poverty Level
Broward	1	10613	4.1	Broward	2	10609	9.2
Broward	1	10614	10.75	<b>Broward</b>	<b>4</b>	<b>10610</b>	<b>36.06</b>
Broward	1	10615	9.92	Broward	1	10406	10.07
Broward	2	10615	1.02	Broward	1	10601	1.25
Broward	3	10407	5.31	Broward	3	10601	4.79
Broward	2	10502	0	Broward	2	10606	6.42
Broward	1	10504	1.94	Broward	1	10609	7.24
Broward	1	10401	0.33	Broward	2	10610	1.83
Broward	1	10605	3.21	Broward	3	10610	3.63
<b>Broward</b>	<b>1</b>	<b>10402</b>	<b>14.67</b>	Broward	3	10615	11.64
Broward	2	10402	7.56	Broward	2	10401	1.82
Broward	2	10605	4.92	<b>Broward</b>	<b>4</b>	<b>10405</b>	<b>34.87</b>
Broward	1	10606	11.64	<b>Palm Beach</b>	<b>1</b>	<b>7624</b>	<b>31.32</b>
Broward	3	10605	0.18	Palm Beach	1	7739	2.87

**RACE AND ETHNICITY** - Included in **Table 3.2** are the Broward County, Palm Beach County, and the Sawgrass Expressway/SR 869 Study Area averages for race and ethnicity. The Study Area has a Hispanic or Latino ethnicity of 24%, which is similar to that of Palm Beach County (23.5%) and less than Broward County (31.3%). As a result, the project study area is not significantly different than the surrounding county area. However, a few of the individual Census Blocks adjacent to the project area were dissimilar and have higher concentrations of minority populations than the surrounding county as shown in **Table 3.3**.

**Table 3.2 - County and Study Area Census Data for Race and Ethnicity**

	Black or African American	American Indian & Alaska Native	Asian	Native Hawaiian and Other Pacific Islander	Other	Two or More Races	Hispanic or Latino	White (Non-Hispanic)
Broward County	26.6%	0.2%	3.8%	0.04%	1.1%	3.9%	31.3 %	33.1%
Palm Beach County	17.1%	0.1%	2.9%	0.03%	0.7%	3.4%	23.5%	52.3%
Study Area	12.8%	0.1%	4.8%	0.06%	2.7%	9.2%	24.0%	46.4%

**Table 3.3 - Block Groups Level Race and Ethnicity**

**LIMITED ENGLISH PROFICIENCY** - Based on U.S. DOT Policy Guidance, the FDOT has identified four factors to help determine if Limited English Proficiency (LEP) services will be required as listed in the FDOT PD&E Manual, Part 1, Chapter 11, Section 11.1.2.2. These factors are:

- Factor 1: The number or proportion of LEP persons eligible to be serviced or likely to be encountered by a program, activity, or service of the recipient or grantee;
- Factor 2: The frequency with which LEP persons come in contact with the program;
- Factor 3: The nature and importance of the program, activity, or service provided by the recipient to people's lives; and
- Factor 4: The resources available to the recipient and costs.

The LEP (speaks English "Less than Very Well") for the Block Groups that intersect the study buffer are illustrated in **Table 3.4**. Spanish, followed by Indo-European, is the most common single language group within the LEP for the study area.

**Table 3.4 - Study Area Limited English Proficiency**

Block Groups	Tract	Speaks English Very Well	Speaks English Well	Speaks English Not Well	Speaks English Not at All	Speaks English Less than Very Well (% in Tract Block)
1	10613	671	206	81	0	9.98%
1	10614	980	155	5	8	6.78%
1	10615	606	63	25	0	3.52%
2	10615	61	93	0	24	14.29%
3	10407	92	111	54	0	19.48%
2	10502	430	24	20	0	4.22%

<b>57,314 Total</b>		15,569	4,870	2,052	414	32%

The U.S. DOT has adopted the Department of Justice's (DOJ's) Safe Harbor Provision. This provision stipulates that public involvement efforts should include the written translation of vital documents for each LEP language group that constitutes five percent (5%) or 1,000 persons, whichever is less, of the total population of persons eligible to be served or likely to be affected or encountered by this project. The impacted Block Groups include a total of 7,336 (32%) total persons above the age of 5 that would fall into the definition of Limited English Proficiency. Based on reviews of the previously mentioned four factors and the information outlined in the previous table, LEP services will be required.

**AGE AND DISABILITY** - Within the Block Groups that intersect the Study Area, the median age is 49, and persons aged 65 and over comprise 13.9% of the

population. There is an average of 6.4% of the population between the ages of 20 and 64 that have a disability.

**HOUSING** - There are 24,440 housing units in the Block Groups that intersect the Study Area. There are 14,518 (59.4%) owner-occupied units and 6,828 (27.94%) renter occupied units.

**COMMUNITY FACILITIES** - There are numerous community services located along the project limits, as shown in **Table 3.5**. The project was reviewed for all community characteristics per the *PD&E Manual, Part 2, Chapter 4* and the following table documents key resources present in the study area.

**Table 3.5 – Study Area Community Facilities**

Facility Name	Address
<b>Business Centers</b>	
Quiet Waters Business Park	710 - 750 S Powerline Rd, Deerfield Beach
<b>Medical Facilities</b>	
Med-Care Pharmacy	1052 Powerline Rd, Deerfield Beach
<b>Park and Recreational Facilities</b>	
Lakeside Park	5555 Regency Lakes Blvd, Coconut Creek
Winston Park Nature Trails	5201 NW 49th Ave, Coconut Creek
Winston Park	5201 NW 49th Ave, Coconut Creek
Banyan Trails/Sabal Pines Park	5005 NW 39th Ave, Coconut Creek
Horse Trails	3601-3765 Vinkemulder Rd, Coconut Creek
Tradewinds Park & Stables	3600 W Sample Rd, Coconut Creek
Quiet Waters Park	401 S Powerline Rd, Deerfield Beach
Trailhead Park	3700 American Way, Deerfield Beach
<b>Religious Centers</b>	
Real Life Church	4001 NW 63rd St, Coconut Creek
<b>Schools</b>	
Ladybird Academy of Coral Springs	5700 Creekside Dr, Coral Springs
Discovery Pre-School Center	5603 Regency Lakes Blvd, Coconut Creek
Bright Horizons at Coconut Creek	5601 Regency Lakes Blvd, Coconut Creek
Tradewinds Elementary School	5400 Johnson Rd, Coconut Creek
Chesterbrook Academy Preschool	5520 Alexandra Blvd, Coconut Creek
La Petite Academy of Deerfield Beach	280 NW 45th Ave, Deerfield Beach

**EMERGENCY SERVICES** - There are no emergency services that are located within the Study Area.

### 3.2 LAND USE

Land use planning is the systematic assessment of land and how communities govern its use to best meet the needs of the population while responsibly managing resources. Land use cover descriptions provided for both uplands and wetlands are classified utilizing the Florida Land Use Cover and Forms Classifications System (FLUCCS, FLUCFCS) designations. Historical images, aerial photographs, and land use mapping from the South Florida Water Management District (SFWMD) were utilized to determine current land use and habitat types within 500 feet of the project (**Figure 3.3** and **Figure 3.4**).

The study area consists of Commercial and Services (6.2%), Other Light Industrial (0.44%), Educational Facilities (0.52%), Herbaceous Dry Prairie (0.23%), Recreational (Parks, Zoos, Golf Courses) (6.61%), Water Reservoirs (8.71%), Residential – High Density (28.64%), Residential – Low Density (2.37%), Residential – Medium Density (8.76%), Channelized Waterways or Canals (1.35%), Roads and Highways (26.72%), Upland Hardwood and Mixed Forests (3.60%), Utilities (1.21%), Freshwater Marshes and Aquatic Vegetation (1.8%), Cypress (0.76%), Wetland Forested Mixed (0.20%), and Wetland Hardwood Forests (1.94%).

### 3.3 MOBILITY

Mobility is the ability of people to move about freely; it encompasses all modes of travel, including pedestrian, bicyclist, and transit. FDOT's mission statement is centered around providing a "safe transportation system that ensures the mobility of people and goods, enhances economic prosperity, and preserves the quality of our environment and communities."

Sawgrass Expressway (SR 869) is a limited access tolled expressway providing high-speed access to the western parts of northwest Broward County. SR 869 serves as part of the emergency evacuation route network designated by the Florida Division of Emergency Management and by Broward County. This corridor is critical in facilitating traffic during emergency evacuation periods as it connects to other major arterials and highways of the state evacuation route network (i.e., I-595, I-75, Florida's Turnpike and to I-95 via the arterial portion of SR 869 known as SW 10th Street to the east). The proposed project will add capacity to support the

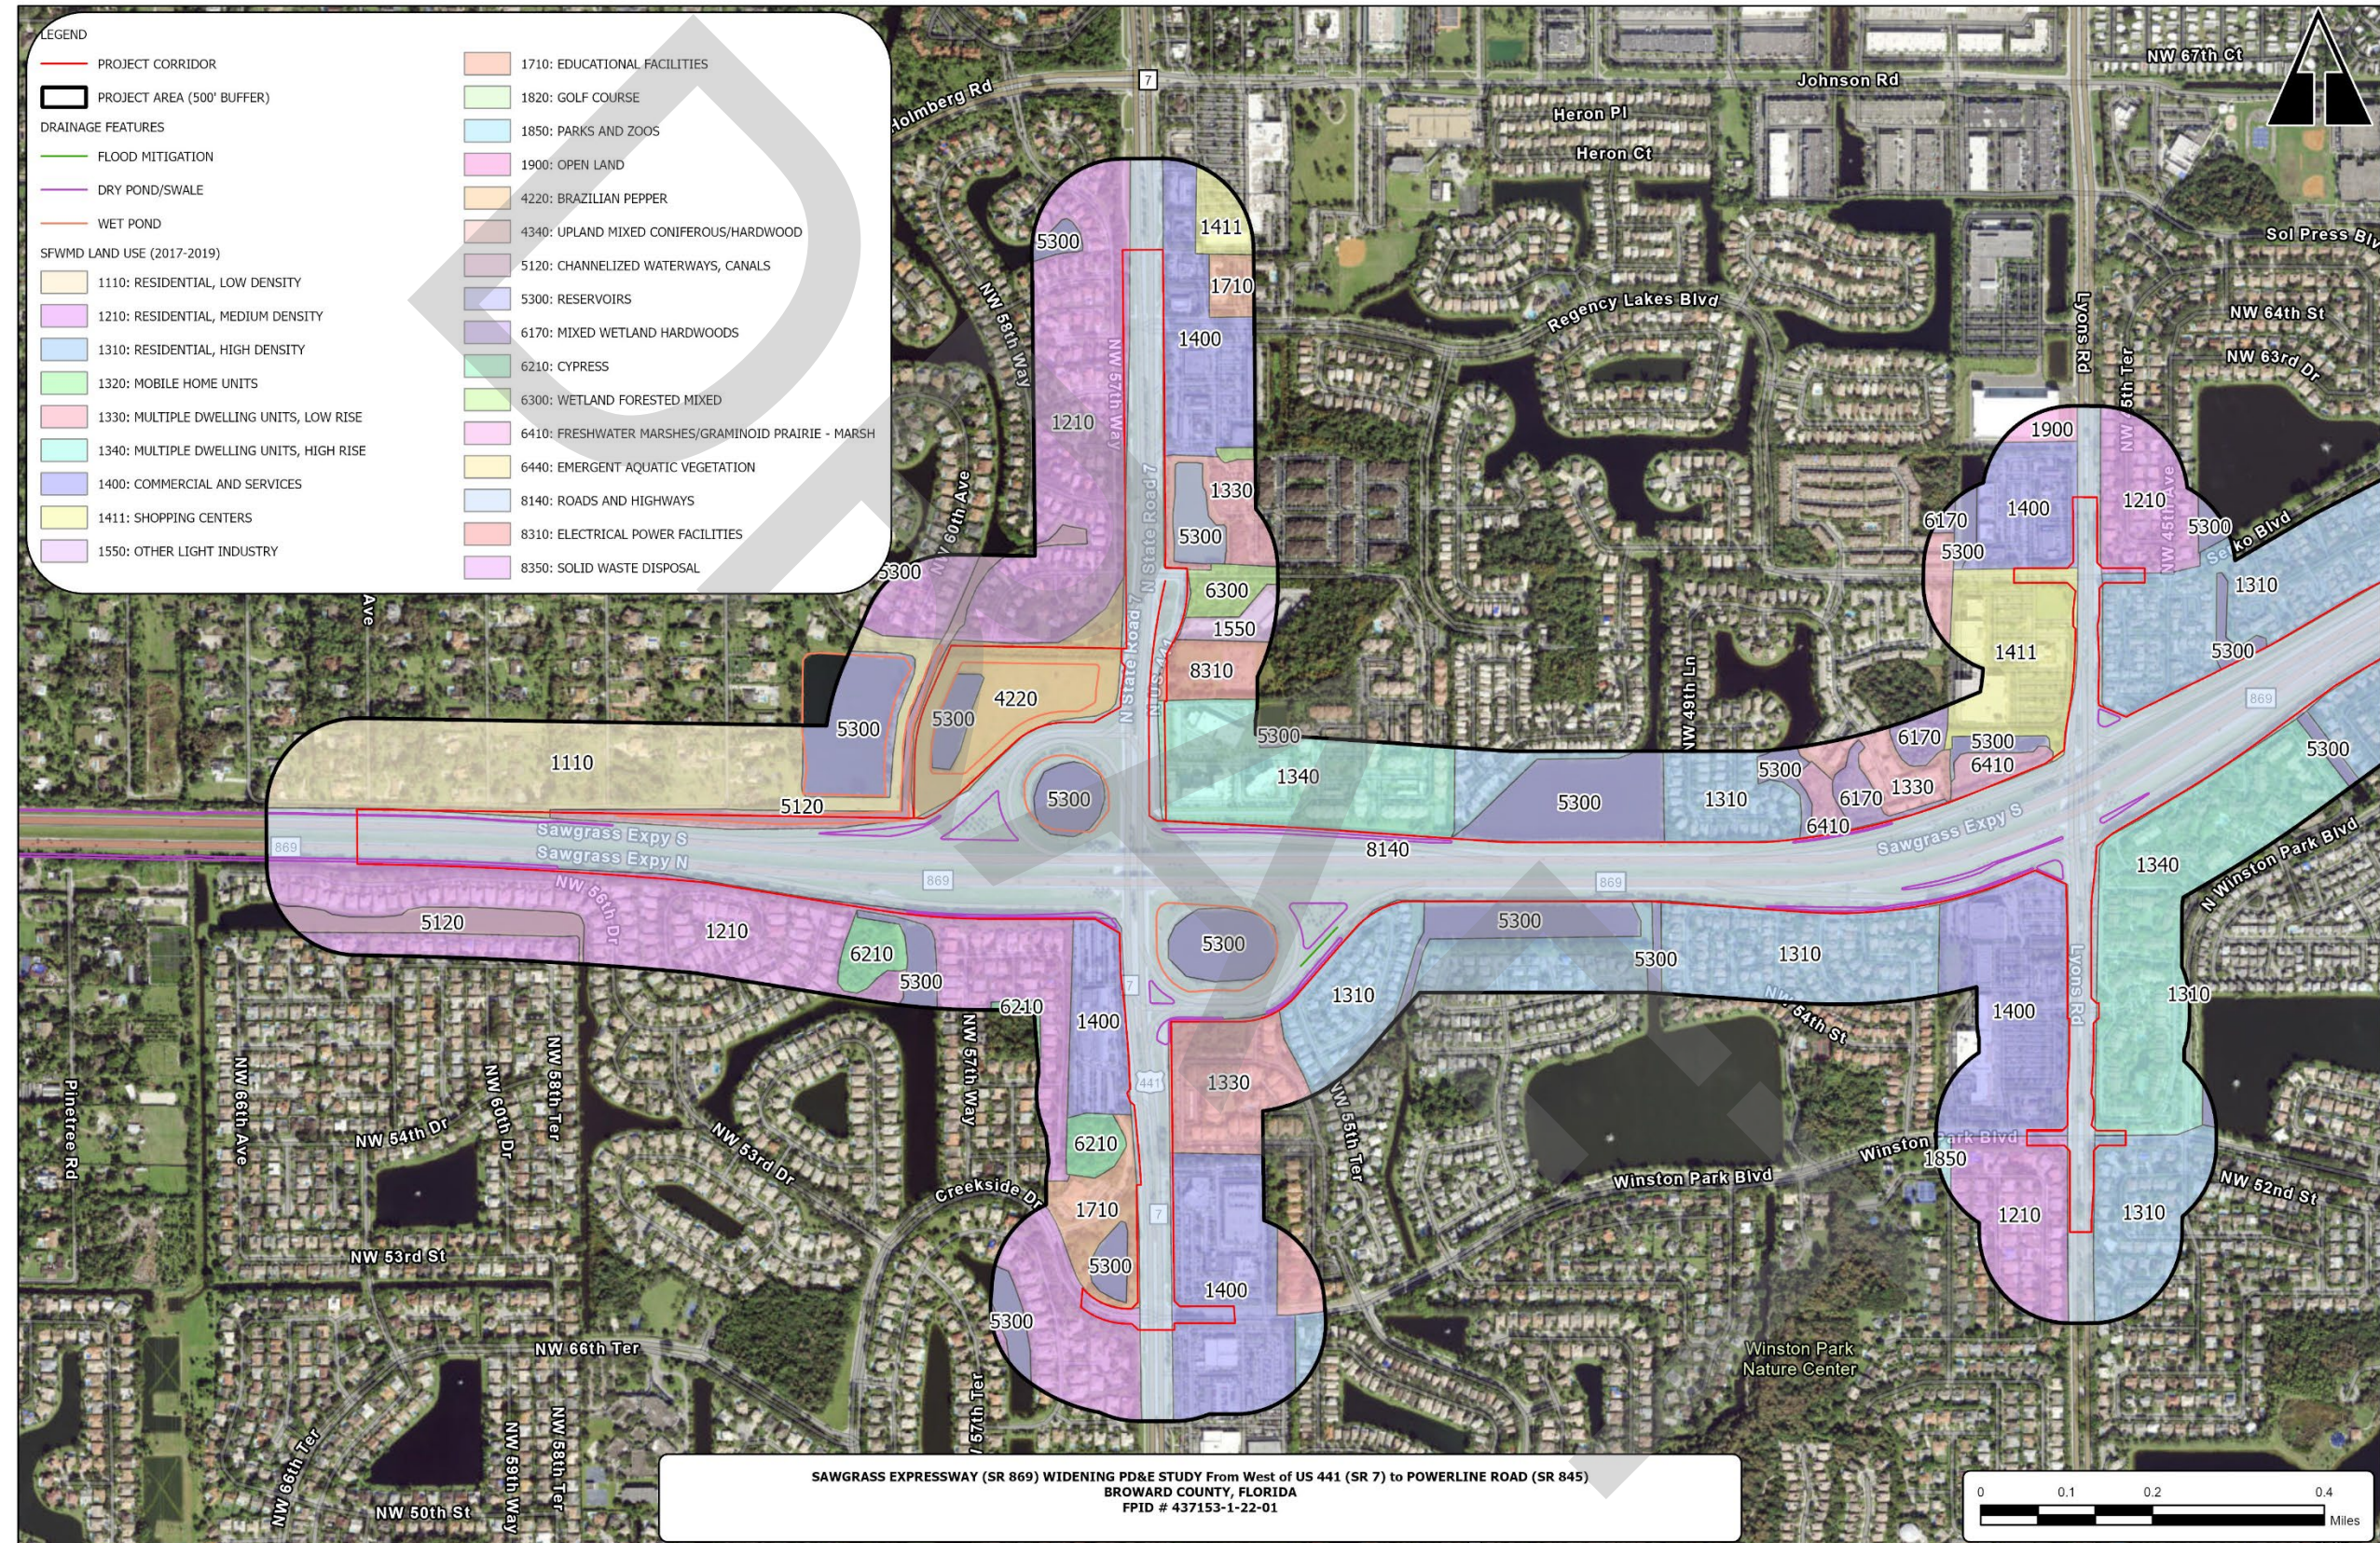

Figure 3.3 - Land Use in Western Portion of the Project Area

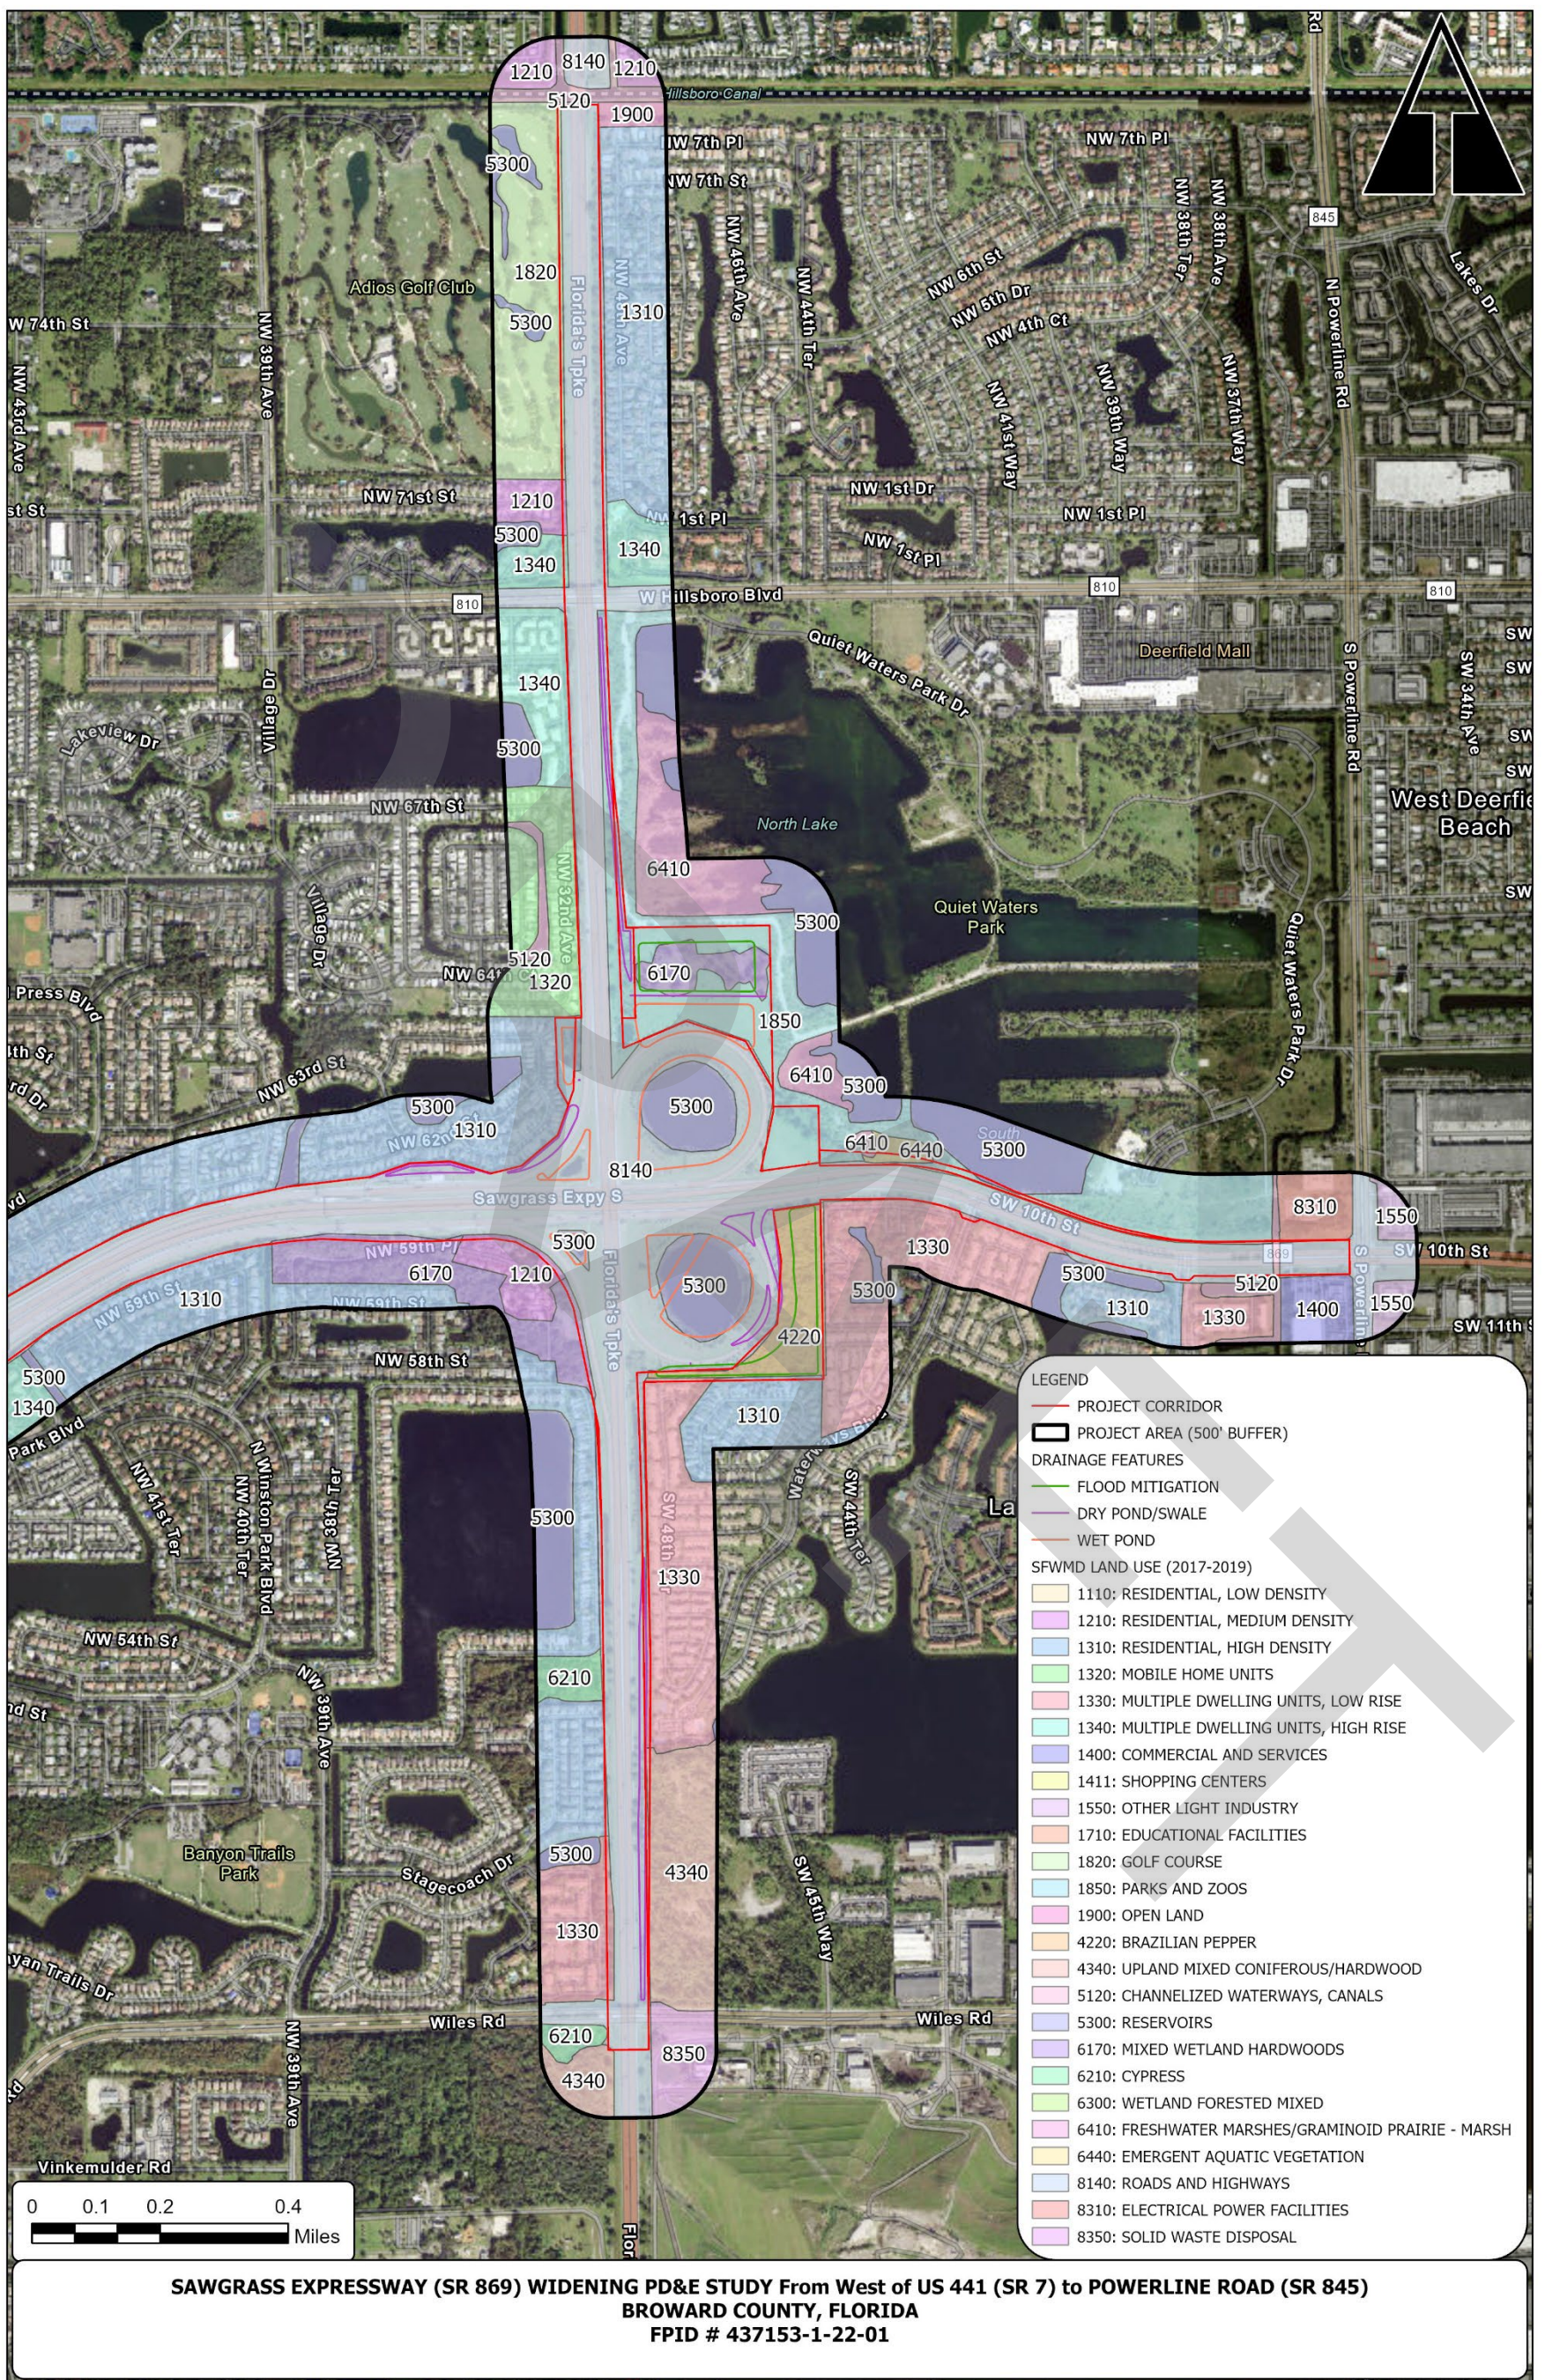

Figure 3.4 - Land Use in Eastern Portion of the Project Area

region's growth and improve mobility and safety. The proposed project will improve vehicular connectivity, mobility, and emergency response.

### 3.4 AESTHETICS

The project area is currently used for transportation and is heavily developed. The project does not propose introducing any new aesthetic elements to the landscape.

## 4.0 POTENTIAL EFFECTS

The No-Build Alternative would not meet the project Purpose and Need and is generally used as a baseline for comparison with the impacts from the Preferred Alternative. This Sociocultural Effects Evaluation analyzes and reports the potential impacts to the social environment from the Preferred Alternative.

Transportation projects may have various types of impacts on the surrounding environment that can be categorized as either direct, indirect, or cumulative. Direct effects are caused by the action and occur at the same time and place. These include changes in the community that principally occur as a result of implementing a transportation project, such as acquisition of right-of-way and associated business displacements. Indirect effects occur later in time or are further removed in distance and may extend beyond the boundary of a community. Indirect effects may include growth-inducing impacts such as changes in land use patterns, population density, or growth rate. Cumulative effects result from the incremental impact of the action when added to other past, present, and reasonably future actions. Indirect and cumulative effects may be less obvious than direct effects but can alter the sociocultural environment. An example of an indirect effect would be a project that improves access to an undeveloped area, which stimulates development, causing population increases that result in local school over-crowding. Reviewers provide Degrees of Effect for the social, aesthetic, economic, land use, mobility, and relocation aspects of the existing environment. The Degree of Effect is determined using the criteria summarized in **Table 4.1**.

The Preferred Alternative was subjected to regulatory agency coordination and review through the Efficient Transportation Decision Making process. An Efficient Transportation Decision Making Summary Report (ETDM# 14280) was published on

March 26, 2017, and **Table 4.2** reports the Degrees of Effect as determined by FTE, US Environmental Protection Agency, and the Florida Department of Economic Opportunity, which has since been renamed FloridaCommerce.

**Table 4.1 Evaluation Criteria**

Degree of Effect	Sociocultural Resources
<b>Enhanced</b>	Project has positive effect on community. Affected community supports the proposed project.
<b>None</b>	Project has no effect on the affected community.
<b>Minimal</b>	Project has minimum adverse effect on elements of affected community. Minimum community resistance to the planned project. Little or no mitigation is needed.
<b>Moderate</b>	Project has adverse effect on some elements of the affected community. There is moderate community resistance to the planned project. Public involvement is needed to seek alternatives more acceptable to the community. Moderate community involvement is required during project development. Some mitigation or minimization is needed to gain support from the community.
<b>Substantial</b>	Project has substantial adverse effects on the affected community and faces substantial community resistance. Intensive community interaction with focused public involvement is required during project development to address community concerns. Project will need substantial mitigation to gain public acceptance.
<b>Potential Dispute (Coordination Required)</b>	Project is not in compliance with approved local government comprehensive plans, and/or affects Title VI of the Civil Rights Act of 1964 compliance.

**Table 4.2 Degrees of Effect (ETDM #14280)**

Agency	Social	Economic	Land Use	Mobility	Aesthetics	Relocation
FTE	Moderate	N/A	Minimal	Enhanced	Minimal	Minimal
US EPA	Moderate	-	-	-	-	-
FL Dept. of Economic Opportunity	-	Minimal	Minimal	-	-	-

#### 4.1 SOCIAL

Through the Efficient Transportation Decision Making process, the Degree of Effect for the social environment assigned by the US Environmental Protection Agency was *Moderate*. The US Environmental Protection Agency noted that there are several sensitive social resources adjacent to the project area, including low-income, disadvantaged, minority, and other special populations.

Existing social conditions and demographic data within the study area of the project are presented in **Section 3.0**. An analysis of race, age, and income was conducted for all areas within one-quarter mile of the Preferred Alternative. That data is reported in **Tables 3.1 through 3.3**.

There would be no long-term reductions to access or capacity. Short-term impacts from construction are anticipated from noise and vibration but access to businesses would be maintained. No significant social impact issues associated with this project were identified. Following the Public Involvement Plan, the study team reached out to the stakeholders located along the project area.

A review of potential impacts to demographics, community cohesion, safety, and community goals/quality of life issues is provided below. For the above reasons, the overall Degree of Effect assigned to the social environment by FTE during the Efficient Transportation Decision Making process is *Moderate*.

**DEMOGRAPHICS** - The percentage of persons aged 65 and over in the study area (13.9%) is lower than that of Broward County (16.7%) and Palm Beach County (23.8%). There are four Census Block Groups within the study area that have

poverty levels higher than the county averages, ranging from 15% - 36% (12.3% for Broward County and 11.6% for Palm Beach County).

There are no census blocks within the survey area where the minority population exceeds 50%. Some census blocks have a higher percentage of minority population than the county; however, they are not meaningfully different. There is one Block Group with a higher percentage of American Indian & Alaska Native individuals (1%) than the county average (0.2%), 22 Block Groups with a higher percentage of Asian (4 – 8%) than the relevant county averages (3.8% for Broward County and 4.8% for Palm Beach County), and four Block Groups with a higher percentage of Hispanic or Latino individuals (27-43%) than the relevant county averages (31.3% for Broward County and 23.5% for Palm Beach County). The Sawgrass Expressway Study Area has a Hispanic or Latino ethnicity of 24%.

The Block Groups that intersect the study area include a total of 7,336 (32%) persons above the age of 5 that would fall into the definition of Limited English Proficiency. Spanish, followed by Indo-European, is the most common single language group within the LEP for the study area.

The project does not involve any relocations, so there are no known special cases such as handicapped or disabled displacements that warrant special assistance. The project would not result in long-term impacts to access or capacity and is not expected to contribute to social isolation of any special populations. No disproportional impacts to special populations are anticipated.

**COMMUNITY COHESION** - The Preferred Alternative does not divide any communities or restrict access to existing community facilities in the long-term. Therefore, the project is not anticipated to have any significant negative impacts on community cohesion.

**SAFETY** - The Preferred Alternative is expected to result in an enhancement regarding safety along the corridor due to improving travel patterns and mobility. There would be no long-term changes to vehicle access or capacity under the Preferred Alternative. Access for all emergency services will be maintained throughout construction, with only minor potential decreases in response times due to traffic resulting from construction.

**COMMUNITY GOALS/QUALITY OF LIFE** – The project is compatible with the City of Coconut Creek, City of Coral Springs, City of Deerfield Beach, and City of Parkland development goals and Comprehensive Plans. Short-term impacts to access during construction are anticipated under the Preferred Alternative. Following the Public Involvement Plan, residents within the Public Involvement Outreach Area were contacted to provide input into the decision-making process. No apparent incompatibility between the Preferred Alternative and the community goals or quality of life in the study area has been identified.

**SPECIAL COMMUNITY DESIGNATIONS** - There are no historic neighborhoods, historic business districts, or any communities with other special designations in the study area.

## 4.2 ECONOMIC

Through the Efficient Transportation Decision Making process, the summary Degree of Effect assigned to economic issues by the Florida Department of Economic Opportunity (now FloridaCommerce) was *None/No Involvement* stating that:

*The project is not located within a Rural Area of Opportunity. The project will likely enhance ongoing development and allow incremental new development to proceed in the affected jurisdictions by maintaining adopted levels of service for the immediate future on these major regional access and traffic throughput corridors (The Florida Turnpike and the Sawgrass Expressway). The project has the capacity to generate jobs to the degree that it serves to maintain or improve levels of service for the immediate future for both the Sawgrass Expressway and the Florida Turnpike, each a major regional arterial. These projects collectively support continued development and job growth in the region.*

During the PD&E study, a review of potential impacts to commerce and the tax base was conducted and additional details are provided below. There would be no relocations or displacements under the Preferred Alternative, so no significant negative economic impacts are anticipated. The Degree of Effect assigned to economic issues by FTE during the Efficient Transportation Decision Making process was *None/No Involvement*.

**BUSINESS AND EMPLOYMENT** - Businesses are located adjacent to the project area on local roads connected via interchanges, however no business access will be changed as a result of this project. These businesses provide employment opportunities for residents in the study area and contribute to the quality of life in the community. The Preferred Alternative does not require any business relocations and only temporary impacts to businesses during construction are anticipated. Access to businesses will be maintained during construction. Therefore, no significant impacts on business or employment are anticipated.

**TAX BASE** - The Preferred Alternative will not require any relocations and therefore would not have an impact on the tax base.

**TRAFFIC PATTERNS** - Long-term traffic patterns are expected to improve under the Preferred Alternative, due to the increased capacity and enhanced mobility. There would be minor, short-term impacts during construction.

**SPECIAL NEEDS PATRONS** - No special needs patrons were identified within the study area.

#### 4.3 LAND USE CHANGES

**LAND USE** - Through the Efficient Transportation Decision Making process, the FTE made the following summary comments:

*Commercial and industrial land uses are predominantly clustered near the interchanges and along major arterial roadways, while the residential land uses (low, medium and high density) are located adjacent to the Sawgrass Expressway. A review of the Future Land Use Map of the City of Coral Springs (Comprehensive Plan adopted December 16, 2008), City of Parkland (Comprehensive Plan adopted August 2008), City of Coconut Creek (Comprehensive Plan adopted October 2007), and City of Deerfield Beach (Comprehensive Plan adopted January 2014) shows that the future land use is not expected to change in the next 20 years. Because the corridor is well established and no new interchanges are being proposed, the current land use patterns are unlikely to change significantly in the future. Therefore, impacts to surrounding Land Uses are anticipated to be Minimal.*

During this PD&E study, a review of potential impacts to land use patterns, planning consistency, and growth trends was conducted, and details are provided below. The Preferred Alternative will not result in a change in the character or aesthetics of the existing landscape and is not anticipated to be the driver of land use changes in the region. The overall Degree of Effect assigned to land use changes by FTE during the Efficient Transportation Decision Making process was *Minimal*.

**PLAN CONSISTENCY** - The project is compatible with each community's development goals and portions of the project are included on the Broward County 2017 Transportation Improvement Program (TIP) Project Maps by specific municipality. According to Future Land Use Maps surrounding the project area, the project will continue to support the noted land uses.

The project is included in the current FDOT State TIP and the FDOT 2023-2027 Five-Year Work Program. The project is also listed in the Broward County 2045 Metropolitan Transportation Plan 2045.

**GROWTH TRENDS AND ISSUES** – The continued growth within Broward County, specifically western Broward County, will drive the need for infrastructure improvements. Travel demand on the Sawgrass Expressway is directly related to population and employment changes within Broward County and the cities within the project area. The Preferred Alternative would increase capacity and is expected to accommodate anticipated growth trends. The project is not expected to increase or decrease employment opportunities in the local economy. Regional employment opportunities will not be enhanced or diminished as a result of the project.

**COMMUNITY FOCAL POINTS** - The Sawgrass Expressway study area includes a variety of community focal points ([Table 3.5](#)), including Quiet Waters Park, religious facilities, childcare facilities, and educational facilities. The Preferred Alternative will help improve access to these focal points by improving mobility and safety.

Quiet Waters Park is owned by Broward County and is located immediately northeast of the Sawgrass Expressway/Florida's Turnpike Interchange. Adding the proposed new ramp connections at the Sawgrass Expressway/Florida's Turnpike

Interchange will impact approximately 4.88 acres of Quiet Waters Park. The impact areas include parts of two man-made lakes and mountain bike trails. The lakes are considered Other Surface Waters and the impacts will be relatively small in size and are not anticipated to conflict with recreational park use. Modification of some mountain bike trails, and closure of others, is anticipated under the proposed project. Mitigation strategies have been identified for the right-of-way impacts to mountain bike trails in the park. These strategies include assisting with the reconstruction of the trails and land swaps with adjacent FDOT lands that could host additional trails to replace impacted trails. These mitigation strategies are currently being coordinated with Broward County Parks and Recreation and with local mountain bike groups. For all the reasons outlined above, it was determined that the project will have no substantial impact on recreational areas and protected lands.

#### 4.4 MOBILITY

Through the Efficient Transportation Decision Making process, the FTE made the following summary comments:

*Sawgrass Expressway (SR 869) is a limited access tolled expressway providing high-speed access to the western parts of northwest Broward County. Sawgrass Expressway (SR 869) serves as part of the emergency evacuation route network designated by the Florida Division of Emergency Management and by Broward County. This corridor is critical in facilitating traffic during emergency evacuation periods as it connects to other major arterials and highways of the state evacuation route network (i.e., I-595, I-75, Florida's Turnpike and to I-95 via the arterial portion of SR 869 known as SW 10th Street to the east). The proposed project will add capacity to support the region's growth, and improve mobility and safety. The proposed project will improve vehicular connectivity, mobility, and emergency response.*

The overall Degree of Effect assigned to mobility by FTE during the Efficient Transportation Decision Making process was *Enhanced*.

**MOBILITY CHOICES** - Mobility features within the study area include Broward Transit routes. Travel patterns are expected to remain the same as the existing patterns

under the Preferred Alternative, though short-term impacts during construction are anticipated. There would be no long-term impacts to access or capacity.

**ACCESSIBILITY** - The Preferred Alternative would improve capacity and mobility for the study area and is therefore expected to improve long-term access to adjacent homes, businesses, or community features.

**CONNECTIVITY** - The Preferred Alternative would increase capacity and improve access to the project area, therefore improvements to connectivity are anticipated. Short term impacts are anticipated during construction but would not sever connectivity.

**TRAFFIC PATTERNS** - Because the Preferred Alternative would improve vehicle movement efficiency through the project area, long-term improvements to traffic patterns are anticipated. Short-term impacts are anticipated during construction.

**PUBLIC PARKING** - There are no public parking facilities within the project area, so no impacts are anticipated.

**BICYCLES AND PEDESTRIANS** - Sawgrass Expressway and Florida's Turnpike are limited access facilities. Therefore, the preferred alternative does not include bicycle or pedestrian accommodations. Bicycle and pedestrian accommodations will be maintained at the two Sawgrass Expressway interchanges, US 441, and Lyons Road, and adjacent signalized intersections. At the Lyons Road Interchange, the bicycle lanes will be extended north of the Sawgrass Expressway to Serko Boulevard. This improvement will provide full multimodal connectivity under the Sawgrass Expressway and a safer route for bicyclists, enhancing the mobility within the corridor. Bicycle and pedestrian accommodations will also be maintained along SW 10th Street (as proposed by the SW 10th Street Connector project) and the Wiles Road and Hillsboro Boulevard bridges over Florida's Turnpike. Crosswalks and ADA compliant curb ramps will be provided at all intersections impacted by the project.

#### 4.5 AESTHETIC EFFECTS

Through the Efficient Transportation Decision Making process, the FTE made the following summary comments:

*The proposed mainline and interchange modifications to be constructed along the corridor will predominantly utilize existing ROW with some potential for ROW acquisition at the interchanges and/or for proposed stormwater ponds. The current Sawgrass Expressway (SR 869) corridor contains significant landscaping and noise barriers. A Landscaping Opportunity Plan will be developed to evaluate potential landscaping along the corridor that could be planted after construction is complete. A noise study will be conducted to examine the potential impacts from the proposed project and will evaluate the need for additional noise barriers. The proposed improvements would likely result in minor visual impacts to the surrounding communities. Outdoor advertising signs exist along the project corridor. Impacts to permitted signs and their viewsheds will need to be addressed during design plan development.*

During this PD&E study, a review of the potential noise/vibration impacts, viewshed, and compatibility issues was conducted, and details are provided below. The Degree of Effect assigned to aesthetics by FTE during the Efficient Transportation Decision Making process was *Minimal*.

**NOISE/VIBRATION** - Short term noise/vibration impacts are anticipated during any construction activities. A Noise Study Technical Memorandum is being prepared as part of this PD&E study and this section will be updated to reflect the findings of that study.

**VIEWSHED** - The Preferred Alternative follows an existing roadway corridor and would not introduce any unnatural or unusual elements into the surrounding viewshed. Florida's Turnpike currently crosses Sawgrass Expressway with overpasses. The proposed project would introduce additional ramps and fly-overs at this intersection, which is adjacent to Quiet Waters Park. It is also anticipated that concurrent FDOT project will be constructing ramps and fly-overs at this intersection. These elevated structures have the ability to affect a larger viewshed because they are at higher elevations than existing structures. However, because of the urban nature of the area and the location along a major transportation corridor with similar infrastructure at major interchanges, these impacts will not change the character of the viewshed and are compatible with intended use of these transportation corridors. Alternatives analysis included evaluating multiple options and reduced impacts by reducing the elevation of structures as much as

practicable. For these reasons, the impacts to the viewshed are anticipated to be insignificant.

**COMPATIBILITY** - The Preferred Alternative would not introduce any structures or improvements that are incompatible with local aesthetics or would appear unusual in the current setting.

#### 4.6 RELOCATION POTENTIAL

Through the Efficient Transportation Decision Making process, the FTE made the following summary comments:

*Improvements proposed to the Sawgrass Expressway (SR 869) corridor are envisioned to occur within the existing right of way (ROW). Impacts to commercial and/or residential properties, including ROW acquisition, may be required to accommodate improvements at the various interchanges and/or to address stormwater management needs of the facility through the construction of stormwater retention ponds. Access to adjacent businesses and residences could be affected, with some potential property impacts.*

During this PD&E study, a review of the relocation potential for residential, non-residential, and business facilities was conducted. No relocations are anticipated under the Preferred Alternative. The Degree of Effect assigned to relocation potential by FTE during the Efficient Transportation Decision Making process was *Minimal*.

**RESIDENTIAL** - There are no residential relocations anticipated.

**NON-RESIDENTIAL** - There are no business relocations anticipated.

**PUBLIC FACILITIES** - Quiet Waters Park is located in the northeast quadrant of the intersection of Sawgrass Expressway and FTE. Acquisition of new right-of-way is proposed under the preferred alternative along the southern and western edges of Quiet Waters Park.

## 5.0 RECOMMENDATION AND COMMITMENTS

Impacts to the social, economic, land use, mobility, aesthetic, or relocation status of the existing environment from the Preferred Alternative would either have no impact, have minimal to moderate impacts, or be beneficial for the communities in the study area.

### 5.1 RECOMMENDATIONS FOR RESOLVING ISSUES

Through desktop and field reviews as well as public and stakeholder involvement, sociocultural resources in the study area were identified. Those resources included Quiet Waters Park, childcare and educational services, and other facilities noted in **Table 3.5**. During the alternatives development process, impacts to sociocultural resources were avoided and minimized as much as possible. In general, direct impacts were minimized by avoiding the expansion of right-of-way into residences and businesses to the greatest extent possible.

Temporary effects during construction that could affect disadvantaged or historically marginalized populations include construction-related traffic congestion, temporary travel pattern disruptions, noise, and difficult pedestrian street crossings. Best Management Practices will be employed during construction to minimize impacts.

### 5.2 PROJECT COMMITMENTS

There are currently no project commitments related to sociocultural effects.

## 6.0 ENVIRONMENTAL JUSTICE, CIVIL RIGHTS, AND RELATED ISSUES

This project has been developed in accordance with the Civil Rights Act of 1964, as amended by the Civil Rights Act of 1968, along with Title VI of the Civil Rights Act, and Executive Order 12898. Executive Order 12898, *Federal Actions to Address Environmental Justice in Minority Populations*, signed by the President on February 11, 1994, directs federal agencies to take appropriate and necessary steps to identify and address disproportionately high and adverse effects of federal projects on the health or environment of minority and low-income populations to the greatest extent practicable and permitted by law.

All public meetings for the project were/will be advertised in accordance with the latest edition of the FDOT PD&E Manual, allowing opportunities for public participation activities by minority and low-income populations. Based on US DOT Policy Guidance, the FDOT has identified four factors to help determine if Limited English Proficiency (LEP) services would be required as listed in the FDOT PD&E Manual, Part 1, Chapter 11, Section 11.1.2.2. Based on review of these factors and the fact that the LEP population within the project limits accounts for approximately 32% of the population for this project, LEP services will be provided. To date, no comments have been received for this study regarding conflicts with Title VI of the Civil Rights of 1964 or related statute.

Based on the analysis, the Preferred Alternative would not cause disproportionately high and adverse effects on any minority or low-income populations in accordance with the provisions of Executive Order 12898 and FHWA Order 6640.23a. No further Environmental Justice analysis is required. Based on public engagement activities, no controversy is anticipated for the project. Overall, the project is anticipated to improve the quality of life for area residents by reducing improving mobility and safety.

### 6.1 PROTECTED POPULATIONS IN STUDY AREA

This project has been developed without regard to race, color, national origin, age, sex, religion, disability, or family status. Within the study area, multiple census blocks have higher averages of percent population living below poverty level, as discussed in Section 4.0. These census blocks are located along east of FTE at the northeast terminus of the study area in Palm Beach County, west of FTE south of

Hillsboro Blvd, east of FTE and south of Wiles Rd near the southeast terminus of the study area, and south of Sawgrass Expressway near the eastern limits of the study area. There were no special cases identified on this project such as handicapped or disabled displacements that warrant special assistance.

Six census blocks have a greater percentage of the population that speaks English less than 'very well' when compared to county (17% in Broward County and 15% in Palm Beach County). These census blocks are located north of Sawgrass Expressway, from northwest of the FTE Interchange to the eastern terminus of the study area at Powerline Rd, and southeast of FTE and Wiles Rd. The majority of the study area (21 out of 28 total census blocks) report at least 5% of their population speak English less than very well. LEP services are required for this project to comply with Title VI of the Civil Rights Act of 1964.

The project is not expected to contribute to social isolation of any special populations of elderly, handicapped, minority or transit-dependent groups. Title VIII of the Civil Rights Act of 1968 guarantees each person equal opportunity in housing. Relocation resources are available to all business relocates without discrimination.

## 6.2 COORDINATION AND PARTICIPATION

A Public Involvement Plan has been developed and is being carried out as an integral part of the project. The purpose of this program is to establish and maintain communication with the public at-large and individuals and agencies concerned with the project and its potential impacts.

Various public outreach and agency coordination activities took place throughout the PD&E process to help develop, refine and evaluate the various alternatives. A complete summary of the meetings, including meeting notifications, presentations, display materials, comments, sign-in sheets and media coverage is provided in the Comments and Coordination Report, available separately.

## 6.3 SUMMARY OF PROJECT EFFECTS

The Preferred Alternative was aligned and developed to minimize impacts to adjacent properties and remain within the existing right-of-way as much as possible. Minimal new right-of-way is required for the Preferred Alternative,

including along the margins of Quiet Waters Park, northeast of the Sawgrass Expressway and FTE Interchange. No impacts to religious facilities, schools, cemeteries, or historical sites are expected other than minor changes to access during construction.

#### 6.4 MITIGATION AND ENHANCEMENT ACTIONS

The Preferred Alternative has been designed to avoid and minimize potential impacts to the surrounding community, however minimal new right-of-way is required. The Preferred Alternative will not result in any relocations and will have no substantial adverse impacts on the neighborhoods, social, or community services. No mitigation is proposed.

#### 6.5 FINDINGS REGARDING DISPROPORTIONATE ADVERSE EFFECTS

Based on the above discussion and analysis, the Preferred Alternative will not cause disproportionately high and adverse effects on any minority or low-income populations in accordance with the provisions of Executive Order 12898 and FHWA Order 6640.23a. No further Environmental Justice analysis is required.

<b>TABLE NOTES</b>	<p>Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.</p> <p>Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.</p> <p>Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.</p> <p>Source: U.S. Census Bureau, 2017-2021 American Community Survey 5-Year Estimates</p> <p>Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.</p> <p>The 2017-2021 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.</p> <p>Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.</p>

Table: ACSDT5Y2021.B01001

	<p>Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.</p>

<b>TABLE NOTES</b>	<p>Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.</p> <p>Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.</p> <p>Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.</p> <p>Source: U.S. Census Bureau, 2017-2021 American Community Survey 5-Year Estimates</p> <p>Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.</p> <p>The 2017-2021 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.</p> <p>Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.</p>

Table: ACSDT5Y2021.B01002

	<p>Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.</p>

	Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.
	The "children of the householder" and "own children of the householder" concepts are combined in these estimates. For more information, please the following User Note .
	The 2017-2021 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.

Table: ACSDT5Y2021.B11012

	Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
	<p>Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself. N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available. median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-") median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+"). ** The margin of error could not be computed because there were an insufficient number of sample observations. *** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution. ***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. <b>TABLE NOTES</b>	<p>Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.</p> <p>Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.</p> <p>Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.</p> <p>Source: U.S. Census Bureau, 2017-2021 American Community Survey 5-Year Estimates</p> <p>Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.</p> <p>The 2017-2021 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.</p> <p>Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.</p>

Table: ACSDT5Y2021.B16004

	<p>Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.</p>

<b>TABLE NOTES</b>	Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.
	Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.  Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.
	Source: U.S. Census Bureau, 2017-2021 American Community Survey 5-Year Estimates

Table: ACSDT5Y2021.B17021

	Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.
	The categories for relationship to householder were revised in 2019. For more information see Revisions to the Relationship to Household item.
	The 2017-2021 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.
	Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
	Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.
<b>COLUMN NOTES</b>	None

<b>TABLE NOTES</b>	<p>Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.</p>
	<p>Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.</p> <p>Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.</p>
	Source: U.S. Census Bureau, 2017-2021 American Community Survey 5-Year Estimates
	<p>Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.</p>
	<p>The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.</p>

Table: ACSDT5Y2021.B18101

	<p>The 2017-2021 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.</p>
	<p>Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.</p>
	<p>Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.</p>

The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.</p> <p>The 2017-2021 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.</p> <p>Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.</p>

Table: ACSDT5Y2021.B25008

	<p>Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.</p>

<b>TABLE NOTES</b>	<p>Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.</p> <p>Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website.</p> <p>Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.</p> <p>Source: U.S. Census Bureau, 2022 American Community Survey 1-Year Estimates</p> <p>Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.</p> <p>These data for the occupied housing units lines refer to the native or foreign-born status of the householder.</p> <p>Industry titles and their 4-digit codes are based on the 2017 North American Industry Classification System. The Industry categories adhere to the guidelines issued in Clarification Memorandum No. 2, "NAICS Alternate Aggregation Structure for Use By U.S. Statistical Agencies," issued by the Office of Management and Budget.</p> <p>Occupation titles and their 4-digit codes are based on the 2018 Standard Occupational Classification.</p> <p>The categories for relationship to householder were revised in 2019. For more information see Revisions to the Relationship to Household item.</p> <p>In 2019, methodological changes were made to the class of worker question. These changes involved modifications to the question wording, the category wording, and the visual format of the categories on the questionnaire. The format for the class of worker categories are now listed under the headings "Private Sector Employee," "Government Employee," and "Self-Employed or Other." Additionally, the category of Active Duty was added as one of the response categories under the "Government Employee" section for the mail questionnaire. For more detailed information about the 2019 changes, see the 2016 American Community Survey Content Test Report for Class of Worker located at <a href="http://www.census.gov/library/working-papers/2017/acs/2017_Martinez_01.html">http://www.census.gov/library/working-papers/2017/acs/2017_Martinez_01.html</a>.</p> <p>The 2022 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineations due to differences in the effective dates of the geographic entities.</p>

Table: ACSST1Y2022.S0501

	Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
	Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.
<b>COLUMN NOTES</b>	None

<b>TABLE NOTES</b>	<p>Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.</p> <p>Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website.</p> <p>Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.</p> <p>Source: U.S. Census Bureau, 2022 American Community Survey 1-Year Estimates</p> <p>Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.</p> <p>Average family size is derived by dividing the number of related people in households by the number of family households.</p> <p>Housing unit weight is used throughout this table (only exception is the average household and family size cells).</p>

Table: ACSST1Y2022.S1101

	The 2022 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineations due to differences in the effective dates of the geographic entities.
	Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
	Explanation of Symbols:- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area. (X) The estimate or margin of error is not applicable or not available.median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").** The margin of error could not be computed because there were an insufficient number of sample observations.*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.
